1 Overview

The HörTech Open Master Hearing Aid (openMHA), is a development and evaluation software platform that is able to execute hearing aid signal processing in real-time on standard computing hardware with a low delay between sound input and output.

1.1 Structure

The openMHA can be split into four major components :

- **The openMHA command line application (MHA)** (p. 30)
- Signal processing plugins
- Audio input-output (IO) plugins (see **io_file_t** (p. 629), **MHAIOJack** (p. 111), **io_parser_t** (p. 641), **io_tcp_parser_t** (p. 650))
- **The openMHA toolbox library** (p. 31)

Figure 1 openMHA structure

The openMHA command line application (MHA) (p. 30) acts as a plugin host. It can load signal processing plugins as well as audio input-output (IO) plugins. Additionally, it provides the command line configuration interface and a TCP/IP based configuration interface. Several IO plugins exist: For real-time signal processing, commonly the openMHA **MHAIOJack** (p. 111) plugin (see plugins' manual) is used, which provides an interface to the Jack Audio Connection Kit (JACK). Other IO plugins provide audio file access or TCP/IP-based processing.

openMHA plugins provide the audio signal processing capabilities and audio signal handling. Typically, one openMHA plugin implements one specific algorithm. The complete virtual hearing aid signal processing can be achieved by a combination of several openMHA plugins.

1.2 Platform Services and Conventions

The openMHA platform offers some services and conventions to algorithms implemented in plugins, that make it especially well suited to develop hearing aid algorithms, while still supporting general-purpose signal processing.

1.2.1 Audio Signal Domains

As in most other plugin hosts, the audio signal in the openMHA is processed in audio chunks. However, plugins are not restricted to propagate audio signal as blocks of audio samples in the time domain another option is to propagate the audio signal in the short time Fourier transform (STFT) domain, i.e. as spectra of blocks of audio signal, so that not every plugin has to perform its own STFT analysis and synthesis. Since STFT analysis and re-synthesis of acceptable audio quality always introduces an algorithmic delay, sharing STFT data is a necessity for a hearing aid signal processing platform, because the overall delay of the complete processing has to be as short as possible.

Similar to some other platforms, the openMHA allows also arbitrary data to be exchanged between plugins through a mechanism called **algorithm communication variables** (p. 23) or short "AC vars". This mechanism is commonly used to share data such as filter coefficients or filter states.

1.2.2 Real-Time Safe Complex Configuration Changes

Hearing aid algorithms in the openMHA can export configuration settings that may be changed by the user at run time.

To ensure real-time safe signal processing, the audio processing will normally be done in a signal processing thread with real-time priority, while user interaction with configuration parameters would be performed in a configuration thread with normal priority, so that the audio processing does not get interrupted by configuration tasks. Two types of problems may occur when the user is changing parameters in such a setup:

- The change of a simple parameter exposed to the user may cause an involved recalculation of internal runtime parameters that the algorithm actually uses in processing. The duration required to perform this recalculation may be a significant portion of (or take even longer than) the time available to process one block of audio signal. In hearing aid usage, it is not acceptable to halt audio processing for the duration that the recalculation may require.
- If the user needs to change multiple parameters to reach a desired configuration state of an algorithm from the original configuration state, then it may not be acceptable that processing is performed while some of the parameters have already been changed while others still retain their original values. It is also not acceptable to interrupt signal processing until all pending configuration changes have been performed.

The openMHA provides a mechanism in its toolbox library to enable real-time safe configuration changes in openMHA plugins:

Basically, existing runtime configurations are used in the processing thread until the work of creating an updated runtime configuration has been completed in the configuration thread.

In hearing aids, it is more acceptable to continue to use an outdated configuration for a few more milliseconds than blocking all processing.

The openMHA toolbox library provides an easy-to-use mechanism to integrate real-time safe runtime configuration updates into every plugin.

1.2.3 Plugins can Themselves Host Other Plugins

An openMHA plugin can itself act as a plugin host. This allows to combine analysis and re-synthesis methods in a single plugin. We call plugins that can themselves load other plugins "bridge plugins" in the openMHA.

When such a bridge plugin is then called by the openMHA to process one block of signal, it will first perform its analysis, then invoke (as a function call) the signal processing in the loaded plugin to process the block of signal in the analysis domain, wait to receive a processed block of signal in the analysis domain back from the loaded plugin when the signal processing function call to that plugin returns, then perform the re-synthesis transform, and finally return the block of processed signal in the original domain back to the caller of the bridge plugin.

1.2.4 Central Calibration

The purpose of hearing aid signal processing is to enhance the sound for hearing impaired listeners. Hearing impairment generally means that people suffering from it have increased hearing thresholds, i.e. soft sounds that are audible for normal hearing listeners may be imperceptible for hearing impaired listeners. To provide accurate signal enhancement for hearing impaired people, hearing aid signal processing algorithms have to be able to determine the absolute physical sound pressure level corresponding to a digital signal given to any openMHA plugin for processing. Inside the openMHA, we achieve this with the following convention: The single-precision floating point time-domain sound signal samples, that are processed inside the openMHA plugins in blocks of short durations, have the physical pressure unit Pascal ($1\text{Pa} = 1\text{N}/\text{m}^2$). With this convention in place, all plugins can determine the absolute physical sound pressure level from the sound samples that they process: E.g. plugins can compute the rms (root mean squared) sound pressure in Pascal of the current block by computing $\text{rms} = \sqrt{\sum_i x_i^2}$, where x_i refer to the samples of the audio signal in a single audio channel, and the corresponding free-field sound pressure level L in dB SPL FF as $L = 20 \log_{10}(\text{rms}/20\mu\text{Pa})$. ($20\mu\text{Pa}$ is the sound pressure at 0dB SPL FF).

A derived convention is employed in the spectral domain for STFT signals: The sum of the squared magnitudes of all spectral bins computes rms of the signal in the current STFT block: $\text{rms} = \sqrt{\sum_i |X_i|^2}$, the X_i refer to the complex values of the STFT spectral bins. The STFT bins

of the negative frequencies are not stored, since they contain the complex conjugate values of the corresponding positive frequencies. When summing over all bins to compute the `rms` as above, care must be taken to also account for the negative frequencies. Note that the bins corresponding to 0Hz and to the Nyquist frequency have no corresponding negative frequency bin. The sound pressure level in dB can be computed from the `rms` in the same way as in the time domain.

Due to the dependency of the calibration on the hardware used, it is the responsibility of the user of the openMHA to perform calibration measurements and adapt the openMHA settings to make sure that this calibration convention is met. We provide the plugin `transducers` which can be configured to perform the necessary signal adjustments.

3.1 Concept of Variables and Data Exchange in the openMHA

Accessibility of configuration variables and data exchange between plugins (processing blocks) are an important issue in the openMHA. In general, variable types in the openMHA are distinguished by their different access methods. The variable types in the openMHA are:

Accessibility of configuration variables and data exchange between plugins (processing blocks) are an important issue in the openMHA. In general, variable types in the openMHA are distinguished by their different access methods. The variable types in the openMHA are:

- **Configuration variables** : Read and write accesses are possible through the openMHA configuration language interface. Configuration variables are implemented as C++ classes with a public data member of the underlying C type. Configuration variables can be read and modified from "outside" using the configuration language. The plugin which provides the configuration variable can use the exposed data member directly. All accesses through the openMHA configuration language are checked for data type, valid range, and access restrictions.
- **Monitor variables** : Read access is possible through the openMHA configuration language. Write access is only possible from the C++ code. Internally, monitor variables have a similar C++ class interface as configuration variables.
- **AC variables (algorithm communication variables (p. 23))**: Any C or C++ data structure can be shared within an openMHA chain. Access management and name space is realised in openMHA chain plugin ('mhachain'). AC variables are not available to the openMHA configuration language interface, although a read-only converter plugin `acmon` is available.

- Runtime configuration** : Algorithms usually derive more parameters (runtime configuration) from the openMHA configuration language variables. When a configuration variable changes through configuration language write access, then the runtime configuration has to be recomputed. Plugin developers are encouraged to encapsulate the runtime configuration in a C++ class, which recomputes the runtime configuration from configuration variables in the constructor. The openMHA supports lock-free and thread-safe replacement of the runtime configuration instance (see **example5.cpp** (p. 15) and references therein).

Figure 2 Variable types in the openMHA

Variables that describe physical facts to the MHA user should be given in SI units, e.g. meters for distances (not centimeters or inches), seconds for times (not milliseconds or minutes) etc for reasons of uniformity and simplicity of handling derived units.

The C++ data types are shown in the figure below. These variables can be accessed via the openMHA host application using the openMHA configuration language. For more details see the openMHA application manual.

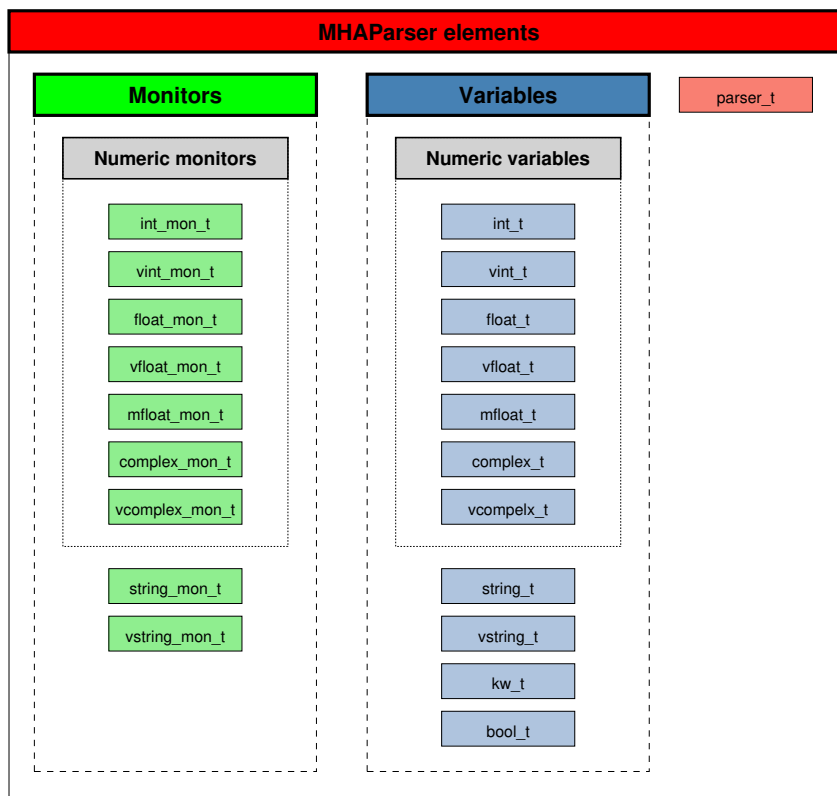

Figure 3 MHAParser elements

3.2 Writing openMHA Plugins. A step-by-step tutorial

Plugins are C++ code that is compiled and linked against the openMHA library. The compiler needs to be instructed on how to find the openMHA headers and library and to link against the openMHA library. There are two possible options: One can compile openMHA and then create a copy of an example plugin directory and customize from there. See `COMPILATION.md` for more information on how to compile openMHA.

On Ubuntu it is also possible to install the `openmha-dev` package and include `config.mk` into the user's Makefile. Example 21 provides an example plugin and Makefile for this scenario.

openMHA contains a small number of example plugins as C++ source code. They are meant to help developers in understanding the concepts of openMHA plugin programming starting from the simplest example and increasing in complexity. This tutorial explains the basic parts of the example files.

3.2.1 example1.cpp

The example plugin file `example1.cpp` (p. 1624) demonstrates the easiest way to implement an openMHA Plugin. It attenuates the sound signal in the first channel by multiplying the sound samples with a factor. The plugin class `MHAPlugin::plugin_t` (p. 1199) exports several methods, but only two of them need a non-empty implementation:

- `prepare()`
 - The `prepare()` method in the parent class `mha_plugin_t<>` is a pure virtual method and needs an implementation so that the plugin class can be instantiated.
- `process()`
 - The `process()` method is called whenever a new block of audio arrives and needs signal processing by this plugin.

```
#include "mha_plugin.hh"
class example1_t : public MHAPlugin::plugin_t<int> {
public:
    example1_t(MHA_AC::algo_comm_t & iac, const std::string & configured_name)
        : MHAPlugin::plugin_t<int>("", iac)
    { (void)configured_name; /* ignore 2nd parameter */ }
    void release(void)
    { /* Do nothing in release */ }
```

Every plugin implementation should include the `'mha_plugin.hh'` (p. 1692) header file. C++ helper classes for plugin development are declared in this header file, and most header files needed for plugin development are included by `mha_plugin.hh` (p. 1692).

The class `example1_t` (p. 487) inherits from the class `MHAPlugin::plugin_t` (p. 1199), which in turn inherits from `MHAParser::parser_t` (p. 1149) – the configuration language interface in the method "parse". Our plugin class therefore inherits the "parse" method from `MHAParser::parser_t` (p. 1149), which integrates the plugin into the global openMHA configuration tree.

The constructor has to accept two parameters of types `algo_comm_t` and `std::string`, respectively. In this simple example, we do not make use of them.

The `release()` method is used to free resources after signal processing. In this simple example, we do not allocate resources, so there is no need to free them.

```

3.2.1.1 The prepare method    void prepare(mhaconfig_t & signal_info)
{
    if (signal_info.domain != MHA_WAVEFORM)
        throw MHA_Error(__FILE__, __LINE__,
            "This plugin can only process waveform signals.");
    if (signal_info.channels < 1)
        throw MHA_Error(__FILE__, __LINE__,
            "This plugin requires at least one input channel.");
}

```

Parameters

<i>signal_info</i>	Contains information about the input signal's dimensions, see mhaconfig_t (p. 905).
--------------------	--

The `prepare()` method of the plugin is called before the signal processing starts, when the input signal dimensions like domain, number of channels, frames per block, and sampling rate are known. The `prepare()` method can check these values and raise an exception if the plugin cannot cope with them, as is done here. The plugin can also change these values if the signal processing performed in the plugin results in an output signal with different parameters. This plugin does not change the signal's parameters, therefore they are not modified here.

```

3.2.1.2 The signal processing method    mha_wave_t * process(mha_wave_t * signal)
{
    unsigned int channel = 0; // channels and frames counting starts with 0
    float factor = 0.1f;
    unsigned int frame;
    // Scale channel number "channel" by "factor":
    for(frame = 0; frame < signal->num_frames; frame++) {
        // Waveform channels are stored interleaved.
        signal->buf[signal->num_channels * frame + channel] *= factor;
    }
    // Algorithms may process data in-place and return the input signal
    // structure as their output signal:
    return signal;
}
};

```

Parameters

<i>signal</i>	Pointer to the input signal structure mha_wave_t (p. 894).
---------------	---

Returns

Pointer to the output signal structure. The input signal structure may be reused if the signal has the same domain and dimensions.

The plugin works with time domain input signal (indicated by the data type **mha_wave_t** (p. 894) of the process method's parameter). It scales the first channel by a factor of 0.1. The output signal reuses the structure that previously contained the input signal (in-place processing).

3.2.1.3 Connecting the C++ class with the C plugin interface Plugins have to export C functions as their interface (to avoid C++ name-mangling issues and other incompatibilities when mixing plugins compiled with different C++ compilers).

MHAPLUGIN_CALLBACKS (example1, example1_t, wave, wave)

This macro takes care of accessing the C++ class from the C functions required as the plugin's interface. It implements the C functions and calls the corresponding C++ instance methods. Plugin classes should be derived from the template class **MHAPLugin::plugin_t** (p. 1199) to be compatible with the C interface wrapper.

This macro also catches C++ exceptions of type **MHA_Error** (p. 818), when raised in the methods of the plugin class, and reports the error using an error flag as the return value of the underlying C function. It is therefore important to note that only C++ exceptions of type **MHA_Error** (p. 818) may be raised by your plugin. If your code uses different Exception classes, you will have to catch them yourself before control leaves your plugin class, and maybe report the error by throwing an instance of **MHA_Error** (p. 818). This is important, because: (1) C++ exceptions cannot cross the plugin interface, which is in C, and (2) there is no error handling code for your exception classes in the openMHA framework anyways.

3.2.2 example2.cpp

This is another simple example of openMHA plugin written in C++. This plugin also scales one channel of the input signal, working in the time domain. The scale factor and which channel to scale (index number) are made accessible to the configuration language.

The algorithm is again implemented as a C++ class.

```
class example2_t : public MHAPLugin::plugin_t<int> {
    MHAParser::int_t scale_ch;
    MHAParser::float_t factor;
public:
    example2_t(MHA_AC::algo_comm_t & iac, const std::string & configured_name);
    void prepare(mhaconfig_t & signal_info);
    void release(void);
    mha_wave_t * process(mha_wave_t * signal);
};
```

Parameters

<i>scale_ch</i>	– the channel number to be scaled
<i>factor</i>	– the scale factor of the scaling.

This class again inherits from the template class **MHAPLugin::plugin_t** (p. 1199) for integration with the openMHA configuration language. The two data members serve as externally visible configuration variables. All methods of this class have a non-empty implementation.

3.2.2.1 Constructor example2_t::example2_t(MHA_AC::algo_comm_t & iac, const std::string & configured_name)
: MHAPLugin::plugin_t<int>("This plugin multiplies the sound signal" in one audio channel by a factor", iac),
scale_ch("Index of audio channel to scale. Indices start from 0.", "0", "[0, (")
factor("The scaling factor that is applied to the selected channel.", "0.1", "[0, (")

```
{
    insert_item("channel", &scale_ch);
    insert_item("factor", &factor);
    (void)configured_name; // Ignore 2nd parameter
}
```

The constructor invokes the superclass constructor with a string parameter. This string parameter serves as the help text that describes the functionality of the plugin. The constructor registers configuration variables with the openMHA configuration tree and sets their default values and permitted ranges. The minimum permitted value for both variables is zero, and there is no maximum limit (apart from the limitations of the underlying C data type). The configuration variables have to be registered with the parser node instance using the `MHAParser::parser_t::insert_item` (p. 1151) method.

3.2.2.2 The prepare method

```
void example2_t::prepare(mhaconfig_t & signal_info)
{
    if (signal_info.domain != MHA_WAVEFORM)
        throw MHA_Error(__FILE__, __LINE__,
            "This plugin can only process waveform signals.");
    // The user may have configured scale_ch before prepare is called.
    // Check that the configured channel is present in the input signal.
    if (signal_info.channels <= unsigned(scale_ch.data))
        throw MHA_Error(__FILE__, __LINE__,
            "This plugin requires at least %d input channels.",
            scale_ch.data + 1);
    // Adjust the range of the channel configuration variable so that it
    // cannot be set to an out-of-range value during processing.
    using MHAParser::StrCnv::val2str;
    scale_ch.set_range("[0," + val2str(int(signal_info.channels)) + "[");
}
```

Parameters

<code>signal_info</code>	– contains information about the input signal's parameters, see <code>mhaconfig_t</code> (p. 905).
--------------------------	--

The user may have changed the configuration variables before preparing the openMHA plugin. A consequence of this is that it is not sufficient any more to check if the input signal has at least 1 audio channel.

Instead, this prepare method checks that the input signal has enough channels so that the current value of `scale_ch.data` is a valid channel index, i.e. $0 \leq \text{scale_ch.data} < \text{signal_info.channels}$. The prepare method does not have to check that $0 \leq \text{scale_ch.data}$, since this is guaranteed by the valid range setting of the configuration variable.

The prepare method then modifies the valid range of the `scale_ch` variable, it modifies the upper bound so that the user cannot set the variable to a channel index higher than the available channels. Setting the range is done using a string parameter. The prepare method concatenates a string of the form "[0,n[". `n` is the number of channels in the input signal, and is used here as an exclusive upper boundary. To convert the number of channels into a string, a helper function for string conversion from the openMHA Toolbox is used. This function is overloaded and works for several data types.

It is safe to assume that the value of configuration variables does not change while the prepare method executes, since openMHA preparation is triggered from a configuration language

command, and the openMHA configuration language parser is busy and cannot accept other commands until all openMHA plugins are prepared (or one of them stops the process by raising an exception). As we will see later in this tutorial, the same assumption cannot be made for the process method.

3.2.2.3 The release method

```
void example2_t::release(void)
{
    scale_ch.set_range("0,[" );
}
```

The release method should undo the state changes that were performed by the prepare method. In this example, the prepare method has reduced the valid range of the `scale_ch`, so that only valid channels could be selected during signal processing.

The release method reverts this change by setting the valid range back to its original value, "[0,[".

3.2.2.4 The signal processing method

```
mha_wave_t * example2_t::process(mha_wave_t * signal)
{
    unsigned int frame;
    for(frame = 0; frame < signal->num_frames; frame++)
        value(signal, frame, scale_ch.data) *= factor.data;
    return signal;
}
```

The processing function uses the current values of the configuration variables to scale every frame in the selected audio channel.

Note that the value of each configuration variable can change while the processing method executes, since the process method usually executes in a different thread than the configuration interface.

For this simple plugin, this is not a problem, but for more advanced plugins, it has to be taken into consideration. The next section takes a closer look at the problem.

Consistency Assume that one thread reads the value stored in a variable while another thread writes a new value to that variable concurrently. In this case, you may have a consistency problem. You would perhaps expect that the value retrieved from the variable either (a) the old value, or (b) the new value, but not (c) something else. Yet generally case (c) is a possibility.

Fortunately, for some data types on PC systems, case (c) cannot happen. These are 32bit wide data types with a 4-byte alignment. Therefore, the values in **MHAParser::int_t** (p. 1116) and **MHAParser::float_t** (p. 1110) are always consistent, but this is not the case for vectors, strings, or complex values. With these, you can get a mixture of the bit patterns of old and new values, or you can even cause a memory access violation in case a vector or string grows and has to be reallocated to a different memory address.

There is also a consistency problem if you take the combination of two "safe" datatypes. The openMHA provides a mechanism that can cope with these types of problems. This thread-safe runtime configuration update mechanism is introduced in example 5.

3.2.3 example3.cpp

This example introduces the openMHA Event mechanism. Plugins that provide configuration variable can receive a callback from the parser base class when a configuration variable is accessed through the configuration language interface.

The third example performs the same processing as before, but now only even channel indices are permitted when selecting the audio channel to scale. This restriction cannot be ensured by setting the range of the channel index configuration variable. Instead, the event mechanism of openMHA configuration variables is used. Configuration variables emit 4 different events, and your plugin can connect callback methods that are called when the events are triggered. These events are:

writeaccess

- triggered on write access to a configuration variable.

valuechanged

- triggered when write access to a configuration variable actually changes the value of this variable.

readaccess

- triggered after the value of the configuration variable has been read.

preadaccess

- triggered before the value of a configuration variable is read, i.e. the value of the requested variable can be changed by the callback to implement computation on demand.

All of these callbacks are executed in the configuration thread. Therefore, the callback implementation does not have to be realtime-safe. No other updates of configuration language variables through the configuration language can happen in parallel, but your processing method can execute in parallel and may change values.

3.2.3.1 Data member declarations

```
class example3_t : public MHAPlugin::plugin_t<int> {
    MHAParser::int_t scale_ch;
    MHAParser::float_t factor;
    MHAParser::int_mon_t prepared;
    MHAEvents::patchbay_t<example3_t> patchbay;
```

This plugin exposes another configuration variable, "prepared", that keeps track of the prepared state of the plugin. This is a read-only (monitor) integer variable, i.e. its value can only be changed by your plugin's C++ code. When using the configuration language interface, the value of this variable can only be read, but not changed.

The patchbay member is an instance of a connector class that connects event sources with callbacks.

3.2.3.2 Method declarations

```

/* Callbacks triggered by Events */
void on_scale_ch_writeaccess();
void on_scale_ch_valuechanged();
void on_scale_ch_readaccess();
void on_prereadaccess();
public:
example3_t(MHA_AC::algo_comm_t & iac, const std::string & configured_name);
void prepare(mhaconfig_t & signal_info);
void release(void);
mha_wave_t * process(mha_wave_t * signal);
};

```

This plugin exposes 4 callback methods that are triggered by events. Multiple events (from the same or different configuration variables) can be connected to the same callback method, if desired.

This example plugin uses the `valuechanged` event to check that the `scale_ch` configuration variable is only set to valid values.

The other callbacks only cause log messages to stdout, but the comments in the logging callbacks give a hint when listening on the events would be useful.

3.2.3.3 Example 3 constructor

```

example3_t::example3_t(MHA_AC::algo_comm_t & iac, const std::string &
: MHAPlugin::plugin_t<int>("This plugin multiplies the sound signal"
    " in one audio channel by a factor",iac),
scale_ch("Index of audio channel to scale. Indices start from 0."
    " Only channels with even indices may be scaled.",
    "0",
    "[0, [",
factor("The scaling factor that is applied to the selected channel.",
    "0.1",
    "[0, [",
prepared("State of this plugin: 0 = unprepared, 1 = prepared")
{
insert_item("channel", &scale_ch);
insert_item("factor", &factor);
prepared.data = 0;
insert_item("prepared", &prepared);

patchbay.connect(&scale_ch.writeaccess, this,
    &example3_t::on_scale_ch_writeaccess);
patchbay.connect(&scale_ch.valuechanged, this,
    &example3_t::on_scale_ch_valuechanged);
patchbay.connect(&scale_ch.readaccess, this,
    &example3_t::on_scale_ch_readaccess);
patchbay.connect(&scale_ch.prereadaccess, this,
    &example3_t::on_prereadaccess);
patchbay.connect(&factor.prereadaccess, this,
    &example3_t::on_prereadaccess);
patchbay.connect(&prepared.prereadaccess, this,
    &example3_t::on_prereadaccess);
}

```

The constructor of a monitor variable does not require a parameter for setting the initial value. The only parameter here is the help text describing the contents of the read-only variable. If the initial value should differ from 0, then the `.data` member of the configuration variable has to be set to the initial value in the plugin constructor's body explicitly, as is done here for demonstration although the initial value of this monitor variable is 0.

Events and callback methods are then connected using the `patchbay` member variable.

3.2.3.4 The prepare method

```
void example3_t::prepare(mhaconfig_t & signal_info)
{
    if (signal_info.domain != MHA_WAVEFORM)
        throw MHA_Error(__FILE__, __LINE__,
            "This plugin can only process waveform signals.");
    // The user may have configured scale_ch before prepare is called.
    // Check that the configured channel is present in the input signal.
    if (signal_info.channels <= unsigned(scale_ch.data))
        throw MHA_Error(__FILE__, __LINE__,
            "This plugin requires at least %d input channels.",
            scale_ch.data + 1);

    // bookkeeping
    prepared.data = 1;
}
```

The prepare method checks whether the current setting of the `scale_ch` variable is possible with the input signal dimension. It does not adjust the range of the variable, since the range alone is not sufficient to ensure all future settings are also valid: The scale channel index has to be even.

3.2.3.5 The release method

```
void example3_t::release(void)
{
    prepared.data = 0;
}
```

The release method is needed for tracking the prepared state only in this example.

3.2.3.6 The signal processing method

```
mha_wave_t * example3_t::process(mha_wave_t * signal)
{
    unsigned int frame;
    for(frame = 0; frame < signal->num_frames; frame++)
        value(signal, frame, scale_ch.data) *= factor.data;
    return signal;
}
```

The signal processing member function is the same as in example 2.

3.2.3.7 The callback methods

```
void example3_t::on_scale_ch_writeaccess()
{
    printf("Write access: Attempt to set scale_ch=%d.\n", scale_ch.data);
    // Can be used to track any writeaccess to the configuration, even
    // if it does not change the value. E.g. setting the name of the
    // sound file in a string configuration variable can cause a sound
    // file player plugin to start playing the sound file from the
    // beginning.
}
void example3_t::on_scale_ch_valuechanged()
{
    if (scale_ch.data & 1)
        throw MHA_Error(__FILE__, __LINE__,
            "Attempt to set scale_ch to non-even value %d",
            scale_ch.data);
    // Can be used to recompute a runtime configuration only if some
    // configuration variable actually changed.
}
void example3_t::on_scale_ch_readaccess()
{
    printf("scale_ch has been read.\n");
    // A configuration variable used as an accumulator can be reset
    // after it has been read.
}
void example3_t::on_prereadaccess()
{
    printf("A configuration language variable is about to be read.\n");
    // Can be used to compute the value on demand.
}
```

```

}
MHAPLUGIN_CALLBACKS (example3, example3_t, wave, wave)

```

When the `writeaccess` or `valuechanged` callbacks throw an `MHAError` exception, then the change made to the value of the configuration variable is reverted.

If multiple event sources are connected to a single callback method, then it is not possible to determine which event has caused the callback to execute. Often, this information is not crucial, i.e. when the answer to a change of any variable in a set of variables is the same, e.g. the recomputation of a new runtime configuration that takes all variables of this set as input.

3.2.4 example4.cpp

This plugin is the same as example 3 except that it works on the spectral domain (STFT).

3.2.4.1 The Prepare method

```

void example4_t::prepare(mhaconfig_t & signal_info)
{
    if (signal_info.domain != MHA_SPECTRUM)
        throw MHA_Error(__FILE__, __LINE__,
            "This plugin can only process spectrum signals.");
    // The user may have configured scale_ch before prepare is called.
    // Check that the configured channel is present in the input signal.
    if (signal_info.channels <= unsigned(scale_ch.data))
        throw MHA_Error(__FILE__, __LINE__,
            "This plugin requires at least %d input channels.",
            scale_ch.data + 1);

    // bookkeeping
    prepared.data = 1;
}

```

The prepare method now checks that the signal domain is `MHA_SPECTRUM`.

3.2.4.2 The signal processing method

```

mha_spec_t * example4_t::process(mha_spec_t * signal)
{
    unsigned int bin;
    // spectral signal is stored non-interleaved.
    mha_complex_t * channeldata =
        signal->buf + signal->num_frames * scale_ch.data;
    for(bin = 0; bin < signal->num_frames; bin++)
        channeldata[bin] *= factor.data;
    return signal;
}

```

The signal processing member function works on the spectral signal instead of the wave signal as before.

The `mha_spec_t` (p. 848) instance stores the complex (`mha_complex_t` (p. 799)) spectral signal for positive frequencies only (since the waveform signal is always real). The `num_frames` member of `mha_spec_t` (p. 848) actually denotes the number of STFT bins.

Please note that different from `mha_wave_t` (p. 894), a multichannel signal in `mha_spec_t` (p. 848) is stored non-interleaved in the signal buffer.

Some arithmetic operations are defined on struct `mha_complex_t` (p. 799) to facilitate efficient complex computations. The `*=` operator used here (defined for real and for complex arguments) is one of them.

3.2.4.3 Connecting the C++ class with the C plugin interface

MHAPLUGIN_CALLBACKS (example4, example4_t, spec, spec)

When connecting a class that performs spectral processing with the C interface, use `spec` instead of `wave` as the domain indicator.

3.2.5 example5.cpp

Many algorithms use complex operations to transform the user space variables into run time configurations. If this takes a noticeable time (e.g. more than 100-500 μ sec), the update of the runtime configuration can not take place in the real time processing thread. Furthermore, the parallel access to complex structures may cause unpredictable results if variables are read while only parts of them are written to memory (cf. section **Consistency** (p. 10)). To handle these situations, a special C++ template class **MHAPLugin::plugin_t** (p. 1199) was designed. This class helps keeping all access to the configuration language variables in the **configuration** thread rather than in the **processing** thread.

The runtime configuration class `example5_t` (p. 501) is the parameter of the template class **MHAPLugin::plugin_t** (p. 1199). Its constructor converts the user variables into a runtime configuration. Because the constructor executes in the configuration thread, there is no harm if the constructor takes a long time. All other member functions and data members of the runtime configurations are accessed only from the signal processing thread (real-time thread).

```
class example5_t {
public:
    example5_t(unsigned int, unsigned int, mha_real_t);
    mha_spec_t* process(mha_spec_t*);
private:
    unsigned int channel;
    mha_real_t scale;
};
```

The plugin interface class inherits from the plugin template class **MHAPLugin::plugin_t** (p. 1199), parameterised by the runtime configuration. Configuration changes (write access to the variables) will emit a write access event of the changed variables. These events can be connected to member functions of the interface class by the help of a **MHAEvents::patchbay_t** (p. 915) instance.

```
class plugin_interface_t : public MHAPLugin::plugin_t<example5_t> {
public:
    plugin_interface_t(MHA_AC::algo_comm_t & iac,
                      const std::string & configured_name);
    mha_spec_t* process(mha_spec_t*);
    void prepare(mhaconfig_t&);
private:
    void update_cfg();
    /* integer variable of MHA-parser: */
    MHAParser::int_t scale_ch;
    /* float variable of MHA-parser: */
    MHAParser::float_t factor;
    /* patch bay for connecting configuration parser
       events with local member functions: */
    MHAEvents::patchbay_t<plugin_interface_t> patchbay;
};
```

The constructor of the runtime configuration analyses and validates the user variables. If the configuration is invalid, an exception of type **MHA_Error** (p. 818) is thrown. This will cause the openMHA configuration language command which caused the change to fail: The modified

configuration language variable is then reset to its original value, and the error message will contain the message string of the **MHA_Error** (p. 818) exception.

```
example5_t::example5_t(unsigned int ichannel,
                      unsigned int numchannels,
                      mha_real_t iscale)
: channel(ichannel),scale(iscale)
{
    if( channel >= numchannels )
        throw MHA_Error(__FILE__,__LINE__,
                        "Invalid channel number %u (only %u channels configured).",
                        channel,numchannels);
}
```

In this example, the run time configuration class **example5_t** (p. 501) has a signal processing member function. In this function, the selected channel is scaled by the given scaling factor.

```
mha_spec_t* example5_t::process(mha_spec_t* spec)
{
    /* Scale channel number "scale_ch" by "factor": */
    for(unsigned int fr = 0; fr < spec->num_frames; fr++){
        spec->buf[fr + channel * spec->num_frames].re *= scale;
        spec->buf[fr + channel * spec->num_frames].im *= scale;
    }
    return spec;
}
```

The constructor of the example plugin class is similar to the previous examples. A callback triggered on write access to the variables is registered using the **MHAEvents::patchbay_t** (p. 915) instance.

```
plugin_interface_t::plugin_interface_t(MHA_AC::algo_comm_t & iac,
                                       const std::string &)
: MHAPlugin::plugin_t<example5_t>("example plugin scaling a spectral signal",iac),
  /* initialzing variable 'scale_ch' with MHAParser::int_t(char* name, ... ) */
  scale_ch("channel number to be scaled","0","[0,["),
  /* initialzing variable 'factor' with MHAParser::float_t(char* name, ... ) */
  factor("scale factor","1.0","[0,2]")
{
    /* Register variables to the configuration parser: */
    insert_item("channel",&scale_ch);
    insert_item("factor",&factor);
    /*
     * On write access to the parser variables a notify callback of
     * this class will be called. That funtion will update the runtime
     * configuration.
     */
    patchbay.connect(&scale_ch.writeaccess,this,&plugin_interface_t::update_cfg);
    patchbay.connect(&factor.writeaccess,this,&plugin_interface_t::update_cfg);
}
```

The processing function can gather the latest valid runtime configuration by a call of `poll_config`. On success, the class member `cfg` points to this configuration. On error, if there is no usable runtime configuration instance, an exception is thrown. In this example, the prepare method ensures that there is a valid runtime configuration, so that in this example, no error can be raised at this point. The prepare method is always executed before the process method is called. The runtime configuration class in this example provides a signal processing method. The process method of the plugin interface calls the process method of this instance to perform the actual signal processing.

```
mha_spec_t* plugin_interface_t::process(mha_spec_t* spec)
{
    poll_config();
    return cfg->process(spec);
}
```

The prepare method ensures that a valid runtime configuration exists by creating a new runtime configuration from the current configuration language variables. If the configuraion is invalid,

then an exception of type **MHA_Error** (p. 818) is raised and the preparation of the openMHA fails with an error message.

```
void plugin_interface_t::prepare(mhaconfig_t& tfcfg)
{
    if( tfcfg.domain != MHA_SPECTRUM )
        throw MHA_Error(__FILE__, __LINE__,
            "Example5: Only spectral processing is supported.");
    /* remember the transform configuration (i.e. channel numbers): */
    tftype = tfcfg;
    /* make sure that a valid runtime configuration exists: */
    update_cfg();
}
```

The `update_cfg` member function is called when the value of a configuration language variable changes, or from the `prepare` method. It allocates a new runtime configuration and registers it for later access from the real time processing thread. The function **push_config** (p. 1197) stores the configuration in a FiFo queue of runtime configurations. Once they are inserted in the FiFo, the **MHAPLugin::plugin_t** (p. 1199) template is responsible for deleting runtime configuration instances stored in the FiFo. You don't need to keep track of the created instances, and you must not delete them yourself.

```
void plugin_interface_t::update_cfg()
{
    if( tftype.channels )
        push_config(new example5_t(scale_ch.data,tftype.channels,factor.data));
}
```

In the end of the example code file, the macro **MHAPLUGIN_CALLBACKS** (p. 1695) defines all ANSI-C interface functions and passes them to the corresponding C++ class member functions (partly defined by the **MHAPLugin::plugin_t** (p. 1199) template class). All exceptions of type **MHA_Error** (p. 818) are caught and transformed into an appropriate error code and error message.

```
MHAPLUGIN_CALLBACKS(example5,plugin_interface_t,spec,spec)
```

3.2.6 example6.cpp

This example is the same as the previous one, except that it additionally creates an 'Algorithm Communication Variable' (AC variable). It calculates the RMS level of a given channel and stores it into this variable. The variable can be accessed by any other algorithm in the same chain. To store the data onto disk, the 'acsave' plugin can be used. 'acmon' is a plugin which converts AC variables into parsable monitor variables.

In the constructor of the plugin class the variable `rmsdb` is registered under the name `example6_rmslev` as a one-dimensional AC variable of type float. For registration of other types, read access and other detailed informations please see **Communication between algorithms** (p. 23).

```
example6_t::example6_t(MHA_AC::algo_comm_t & iac, const std::string &
    : MHAPLugin::plugin_t<cfg_t>("Example rms level meter plugin",iac),
    /* initializing variable 'channel_no' with MHAParser::int_t(char* name, ....) */
    channel_no("channel in which the RMS level is measured","0","[0,[")
{
    /* Register variables to the configuration parser: */
    insert_item("channel",&channel_no);
    /*
    * On write access to the parser variables a notify callback of
    * this class will be called. That function will update the runtime
    * configuration.
    */
    patchbay.connect(&channel_no.writeaccess,this,&example6_t::update_cfg);
```

```
/*  
 * Propagate the level variable to all algorithms in the  
 * processing chain. If multiple instances of this algorithm are  
 * required, than it is necessary to use different names for this  
 * variable (i.e. prefixing the name with the algorithm name  
 * passed to MHAInit).  
 */  
ac.insert_var_float("example6_rmslev", &rmsdb );  
}
```

3.2.7 Debugging openMHA plugins

Suppose you would want to step through the code of your openMHA plugin with a debugger. This example details how to use the GDB debugger to inspect the `example6_t::prepare()` (p. 503) and `example6_t::process()` (p. 503) routines of `example6.cpp` (p. 17) example 6.

First, make sure that your plugin is compiled with the compiler option to include debugging symbols: Apply the `-ggdb` switch to all `gcc`, `g++` invocations.

Once the plugin is compiled with debugging symbols, create a test configuration. For example 6, assuming there is an audio file named `input.wav` in your working directory, you could create a configuration file named `'debugexample6.cfg'`, with the following content:

```
# debugexample6.cfg
fragsize = 64
srate = 44100
nchannels_in = 2
iolib = MHAIOFile

io.in = input.wav
io.out = output.wav
mhalib = example6
mha.channel = 1
cmd=start
```

Assuming all your binaries and shared-object libraries are in your `'bin'` directory (see [README.md](#)), you could start `gdb` using

```
$ export MHA_LIBRARY_PATH=$PWD/bin
$ gdb $MHA_LIBRARY_PATH/mha
```

Set breakpoints in `prepare` and `process` methods, and start execution. Note that specifying the breakpoint by symbol (`example6_t::prepare` (p. 503)) does not yet work, as the symbol lives in the openMHA plugin that has not yet been loaded. Specifying by line number works, however. Specifying the breakpoint by symbol also works once the plugin is loaded (i.e. when the debugger stops in the first break point). You can set the breakpoints like this (example shown here is run in `gdb` version 7.11.1):

```
(gdb) run ?read:debugexample6.cfg
Starting program: {openMHA_directory}/bin/mha ?read:debugexample6.cfg
[Thread debugging using libthread_db enabled]
Using host libthread_db library "/lib/x86_64-linux-gnu/libthread_db.so.1".
The Open Master Hearing Aid (openMHA) server
Copyright (c) 2005-2021 HoerTech gGmbH, D-26129 Oldenburg, Germany
```

```
This program comes with ABSOLUTELY NO WARRANTY; for details see file COPYING.
This is free software, and you are welcome to redistribute it
under the terms of the GNU AFFERO GENERAL PUBLIC LICENSE, Version 3;
for details see file COPYING.
```

```

Breakpoint 1, example6_t::prepare (this=0x6478b0, tfcfg=...)
  at example6.cpp:192
192     if( tfcfg.domain != MHA_WAVEFORM )
(gdb) b example6.cpp:162
Breakpoint 2 at 0x7ffff589744a: file example6.cpp, line 162.
(gdb) c
Continuing.

```

Where '{openMHA_directory}' is the directory where openMHA is located (which should also be your working directory in this case). Next stop is the `process()` method. You can now examine and change the variables, step through the program as needed (using, for example 'n' to step in the next line):

```

Breakpoint 2, example6_t::process (this=0x7ffff6a06c0d, wave=0x10a8b550)
  at example6.cpp:162
162     {
(gdb) n
163     poll_config();
(gdb)

```

3.2.8 Writing unit tests for openMHA plugins

This section introduces how to test a plugin with C++ unit tests using the Googletest framework. In order to execute the tests, navigate to the openMHA root directory and run `make unit-tests` in your terminal. Afterwards you may execute `make unit-tests` in the plugin directory in order to only execute the very test you are working on.

3.2.8.1 example7 As an example, unit tests for plugin `example7.cpp` (p.1626) are written, which is functionally the same as plugin `example1.cpp` (p.1624) (see section `example1.cpp` (p.6)). In order to write unit tests for your plugin it must have its class/function declarations in a header file (.hh) so you can include it in the unit test file. The class/function definitions are contained in the respective source file (.cpp).

The unit tests are written using a test fixture class (here: `example7_testing`) which will be inherited by the individual tests (`TEST_F`). This enables us to use the members in `example7_testing` in multiple tests without the need for redundant declarations.

```

#include "mha_algo_comm.hh"
#include "mha_signal.hh"
#include "example7.hh"
#include <gtest/gtest.h>
class example7_testing : public ::testing::Test {
public:
  MHA_AC::algo_comm_class_t acspace;
  MHA_AC::algo_comm_t & ac = {acspace};
  mhaconfig_t signal_properties {
    .channels = 2U,
    .domain = MHA_WAVEFORM,
    .fragsize = 10U,
    .wndlen = 0U,
    .fftlens = 0U,
    .srate = 44100.0f
  };
  example7_t ex7 = {ac,"algo"};
  MHASignal::waveform_t wave_input{signal_properties.fragsize,signal_properties.channels};
};

```

The test fixture class is derived from the `::testing::Test` class declared in `gtest.h`. The constructor of `example7_t` (p. 505) needs three parameters, namely a handle to the algorithm communication variable space and two strings. A container for audio signals for repeatedly passing blocks of the input signal to the plugin under test is also allocated by the test fixture class. It is defined as an instance of `MHASignal::waveform_t` (p. 1310) with the name `wave_input` and its values are zero upon initialization.

```
TEST_F(example7_testing, test_state_methods) {
    EXPECT_FALSE(ex7.is_prepared());
    ex7.prepare_(signal_properties);
    acspace.set_prepared(true);
    EXPECT_TRUE(ex7.is_prepared());
    acspace.set_prepared(false);
    ex7.release_();
    EXPECT_FALSE(ex7.is_prepared());
}
```

The first test checks whether the state methods work as expected. Next to the actual processing there are often certain variables in each individual openMHA plugin that need to be allocated beforehand or wiped from memory afterwards. The methods that are used to do this are `prepare()` and `release()`. In order to assert that they were called and that we switched states accordingly we use the methods `prepare_()` and `release_()` (Note: the underscore!) that are defined in the plugin base class `mha_plugin_t<>`. These methods keep track of the state, call `prepare()` and `release()` and do additional bookkeeping. To ensure that the state methods work as expected the Googletest methods `EXPECT_FALSE` and `EXPECT_TRUE` are used.

```
TEST_F(example7_testing, test_functionality) {
    ex7.prepare_(signal_properties);
    acspace.set_prepared(true);
    wave_input.assign(1.0f);
    EXPECT_FLOAT_EQ(1.0f, value(wave_input, 4, 0));
    EXPECT_FLOAT_EQ(1.0f, value(wave_input, 5, 0));
    EXPECT_FLOAT_EQ(1.0f, value(wave_input, 4, 1));
    EXPECT_FLOAT_EQ(1.0f, value(wave_input, 5, 1));
    ex7.process(&wave_input);
    EXPECT_FLOAT_EQ(0.1f, value(wave_input, 4, 0));
    EXPECT_FLOAT_EQ(0.1f, value(wave_input, 5, 0));
    EXPECT_FLOAT_EQ(1.0f, value(wave_input, 4, 1));
    EXPECT_FLOAT_EQ(1.0f, value(wave_input, 5, 1));
    acspace.set_prepared(false);
    ex7.release_();
}
```

In this test the goal is to assess the main feature of the plugin (`example7_t` (p. 505)), which is the same as in `example1_t` (p. 487), namely altering the signal's first channel by a constant factor of 0.1. The variable `wave_input` is the signal that will be processed by the plugin. In order to assert the success, the elements in `wave_input` are set to a constant value of 1, because they are 0 upon initialization. During the `process()` function all elements of the first channel of `wave_input` are multiplied by the factor 0.1. Before `process()` is called the value assigned to `wave_input` is checked via the method `EXPECT_FLOAT_EQ` provided by Googletest. The values of `wave_input` are retrieved by the method `value()` (p. 46) by passing the desired sample position and channel number as second and third input parameter, respectively. Here, we checked the values of two frames in each channel to show the difference before and after processing; the frame indices were chosen randomly. After calling `process()`, the values contained in `wave_input` are checked again to make sure that the plugin worked as intended.

3.3 The MHA Framework interface

3.4 Communication between algorithms

Algorithms within one chain can share variables for communication with other algorithms. This mechanism allows interaction between algorithms (i.e. separation of noise estimation and noise reduction algorithms, combination of dynamic compression and noise estimation). Through a set of simple C functions, algorithms can propagate variables of any type, even C++ classes, to other algorithms.

Collaboration diagram for Communication between algorithms:

Files

- file **mha_algo_comm.hh**
Header file for Algorithm Communication.

Classes

- struct **MHA_AC::comm_var_t**
Algorithm communication variable structure.
- class **MHA_AC::spectrum_t**
- class **MHA_AC::waveform_t**
- class **MHA_AC::ac2matrix_t**
Copy AC variable to a matrix.
- class **MHA_AC::acspace2matrix_t**
Copy all or a subset of all numeric AC variables into an array of matrixes.
- class **MHA_AC::scalar_t** < **numeric_t**, **MHA_AC_TYPECODE** >

Functions

- **mha_spec_t MHA_AC::get_var_spectrum** (**algo_comm_t** &ac, const std::string &name)
Convert an AC variable into a spectrum.
- **mha_wave_t MHA_AC::get_var_waveform** (**algo_comm_t** &ac, const std::string &name)
Convert an AC variable into a waveform.
- int **MHA_AC::get_var_int** (**algo_comm_t** &ac, const std::string &name)
Return value of an integer scalar AC variable.
- float **MHA_AC::get_var_float** (**algo_comm_t** &ac, const std::string &name)
Return value of an floating point scalar AC variable.
- std::vector< float > **MHA_AC::get_var_vfloat** (**algo_comm_t** &ac, const std::string &name)
Return value of an floating point vector AC variable as standard vector of floats.

3.4.1 Detailed Description

Algorithms within one chain can share variables for communication with other algorithms. This mechanism allows interaction between algorithms (i.e. separation of noise estimation and noise reduction algorithms, combination of dynamic compression and noise estimation). Through a set of simple C functions, algorithms can propagate variables of any type, even C++ classes, to other algorithms.

An algorithm communication handle (`algo_comm_t`) is passed at initialisation time to the constructor of each plugin class **constructor** (p. 1199). This handle contains a reference handle, `algo_comm_t::handle`, and a number of function pointers, `algo_comm_t::insert_var` etc.. An algorithm communication variable is accessed through objects of type `comm_var_t`.

For openMHA users, openMHA provides generic plugins to inspect and store AC variables of numeric types:

- plugin `acmon` mirrors AC variables of numeric types in readonly configuration variables (called monitors),
- plugin `acsave` stores AC variables into Matlab or text files. Plugin developers may also want to use these plugins to inspect any AC variables published by their own plugins during testing.

As a developer of openMHA plugin(s), please observe the following best practices in plugins using AC variables:

1. Plugins publishing AC variables:

- insert all variables during `prepare()`
- re-insert all variables during each `process()`
- memory used for storing AC variable values is allocated and owned by the publishing plugin and needs to remain valid until the next call to `process()` or `release()` of the same plugin.

2. Plugins consuming AC variable published by other plugins:

- poll required variables (and check validity) again during each `process()` before accessing their values.

3.4.2 Function Documentation

```
3.4.2.1 get_var_spectrum()  mha_spec_t MHA_AC::get_var_spectrum (
    algo_comm_t & ac,
    const std::string & name )
```

Convert an AC variable into a spectrum.

This function reads an AC variable and tries to convert it into a valid spectrum. The spectrum variable is only valid during the current call of the plugin's process() method and should not be stored for later reuse.

The stride of the AC variable is used as the number of spectral bins per channel. The complex values of the spectrum are not copied, the `buf` pointer of the returned spectrum points to the original memory of the AC variable.

Parameters

<i>ac</i>	AC handle
<i>name</i>	Name of the variable

Returns

Spectrum structure

```
3.4.2.2 get_var_waveform()  mha_wave_t MHA_AC::get_var_waveform (
    algo_comm_t & ac,
    const std::string & name )
```

Convert an AC variable into a waveform.

This function reads an AC variable and tries to convert it into a valid block of waveform signal. The waveform variable only valid during the current call of the plugin's process() method and should not be stored for later reuse.

The stride of the AC variable is used as the number of audio channels. The single-precision floating-point sample values are not copied, the `buf` pointer of the returned waveform points to the original memory of the AC variable.

Parameters

<i>ac</i>	AC handle
<i>name</i>	Name of the variable

Returns

waveform structure

```
3.4.2.3 get_var_int() int MHA_AC::get_var_int (
    algo_comm_t & ac,
    const std::string & name )
```

Return value of an integer scalar AC variable.

Parameters

<i>ac</i>	AC handle
<i>name</i>	Name of the variable

Returns

Variable value

```
3.4.2.4 get_var_float() float MHA_AC::get_var_float (
    algo_comm_t & ac,
    const std::string & name )
```

Return value of an floating point scalar AC variable.

Parameters

<i>ac</i>	AC handle
<i>name</i>	Name of the variable

Returns

Variable value

```
3.4.2.5 get_var_vfloat() std::vector< float > MHA_AC::get_var_vfloat (
    algo_comm_t & ac,
    const std::string & name )
```

Return value of an floating point vector AC variable as standard vector of floats.

Because this function allocates memory for the return value, it should not be called during signal processing, but only from the plugin prepare() method.

Parameters

<i>ac</i>	AC handle
<i>name</i>	Name of the variable

Returns

Variable value

3.5 Error handling in the openMHA

Errors are reported to the user via the **MHA_Error** (p. 818) exception.

Collaboration diagram for Error handling in the openMHA:

Classes

- class **MHA_Error**
Error reporting exception class.

Macros

- #define **MHA_ErrorMsg**(x) **MHA_Error**(__FILE__, __LINE__, "%s", x)
Throw an openMHA error with a text message.
- #define **MHA_assert**(x) if(!x) throw **MHA_Error**(__FILE__, __LINE__, "\"%s\" is false.", #x)
*Assertion macro, which throws an **MHA_Error** (p. 818).*
- #define **MHA_assert_equal**(a, b) if(a != b) throw **MHA_Error**(__FILE__, __LINE__, "\"%s == %s\" is false (%s = %g, %s = %g).", #a, #b, #a, (double)(a), #b, (double)(b))
*Equality assertion macro, which throws an **MHA_Error** (p. 818) with the values.*

Functions

- void **mha_debug** (const char *fmt,...) __attribute__((__format__(printf, 1, 2)))
Print an info message (stderr on Linux, OutputDebugString in Windows).

3.5.1 Detailed Description

Errors are reported to the user via the **MHA_Error** (p. 818) exception.

3.5.2 Macro Definition Documentation

3.5.2.1 MHA_ErrorMsg #define MHA_ErrorMsg(
x) **MHA_Error**(__FILE__, __LINE__, "%s", x)

Throw an openMHA error with a text message.

Parameters

<i>x</i>	Text message.
----------	---------------

3.5.2.2 MHA_assert `#define MHA_assert(
 x) if(!(x)) throw MHA_Error(__FILE__, __LINE__, "\"%s\" is false.", #x)`

Assertion macro, which throws an **MHA_Error** (p. 818).

Parameters

<i>x</i>	Boolean expression which should be true.
----------	--

3.5.2.3 MHA_assert_equal `#define MHA_assert_equal(
 a,
 b) if(a != b) throw MHA_Error(__FILE__, __LINE__, "\"%s == %s\" is
 false (%s = %g, %s = %g).", #a, #b, #a, (double) (a), #b, (double) (b))`

Equality assertion macro, which throws an **MHA_Error** (p. 818) with the values.

Parameters

<i>a</i>	Numeric expression which can be converted to double (for printing).
<i>b</i>	Numeric expression which should be equal to <i>a</i>

3.5.3 Function Documentation

3.5.3.1 mha_debug() `void mha_debug (
 const char * fmt,
 ...)`

Print an info message (stderr on Linux, OutputDebugString in Windows).

3.6 The openMHA configuration language

openMHA Plugins that should use the openMHA configuration language for their configuration have to be implemented in C++ and need to include `mha_parser.hh` (p. 1688). All required classes and functions for parser access are declared in the namespace `MHAParser` (p. 123). The plugin class should be derived from the class `MHAParser::parser_t` (p. 1149) (or `MHAPlugin::plugin_t` (p. 1199)), which symbolises a sub-parser node in the openMHA script hierarchy. Variables of many types can be registered to the sub-parser node by calling the member function `insert_item` (p. 1151).

openMHA Plugins that should use the openMHA configuration language for their configuration have to be implemented in C++ and need to include `mha_parser.hh` (p. 1688). All required classes and functions for parser access are declared in the namespace `MHAParser` (p. 123). The plugin class should be derived from the class `MHAParser::parser_t` (p. 1149) (or `MHAPlugin::plugin_t` (p. 1199)), which symbolises a sub-parser node in the openMHA script hierarchy. Variables of many types can be registered to the sub-parser node by calling the member function `insert_item` (p. 1151).

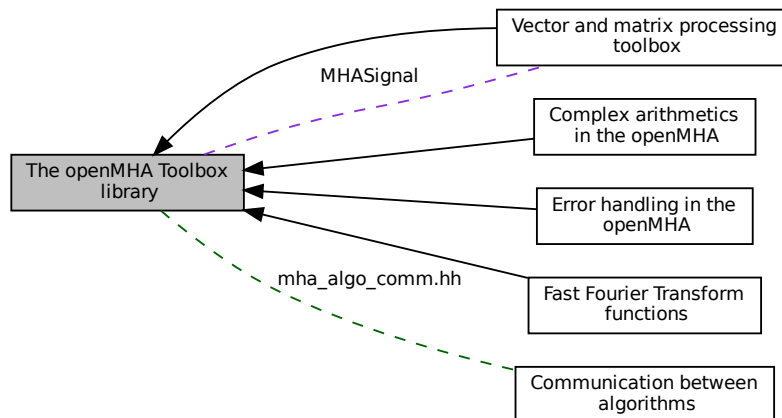

The openMHA Plugin template class `MHAPlugin::plugin_t` (p. 1199) together with the Plugin macro `MHAPLUGIN_CALLBACKS` (p. 1695) provide the callback mappings and correct inheritance. If your plugin is based on that template class, you simply have to use the `insert_item` command to give access to your variables, everything else is managed internally.

A complete list of all openMHA script items is given in the description of the `MHAParser` (p. 123) namespace.

3.7 The openMHA Toolbox library

The openMHA toolbox is a static C++ library which makes it more comfortable to develop openMHA plugins. It contains the openMHA script language classes.

Collaboration diagram for The openMHA Toolbox library:

Modules

- **Error handling in the openMHA**

*Errors are reported to the user via the **MHA_Error** (p. 818) exception.*

- **Vector and matrix processing toolbox**

*The vector and matrix processing toolbox consists of a number of classes defined in the namespace **MHASignal** (p. 137), and many functions and operators for use with the structures **mha_wave_t** (p. 894) and **mha_spec_t** (p. 848).*

- **Complex arithmetics in the openMHA**

- **Fast Fourier Transform functions**

Files

- file **mha_algo_comm.hh**

Header file for Algorithm Communication.

- file **mha_filter.hh**

Header file for IIR filter classes.

- file **mha_signal.hh**

Header file for audio signal handling and processing classes.

- file **mha_tablelookup.hh**

Header file for table lookup classes.

Namespaces

- **MHAOvFilter**
Namespace for overlapping FFT based filter bank classes and functions.
- **MHAFilter**
Namespace for IIR and FIR filter classes.
- **MHAParser**
Name space for the openMHA-Parser configuration language.
- **MHASignal**
Namespace for audio signal handling and processing classes.
- **MHATableLookup**
Namespace for table lookup classes.

3.7.1 Detailed Description

The openMHA toolbox is a static C++ library which makes it more comfortable to develop openMHA plugins. It contains the openMHA script language classes.

3.8 Vector and matrix processing toolbox

The vector and matrix processing toolbox consists of a number of classes defined in the namespace **MHASignal** (p. 137), and many functions and operators for use with the structures **mha_↔_wave_t** (p. 894) and **mha_spec_t** (p. 848).

Collaboration diagram for Vector and matrix processing toolbox:

Namespaces

- **MHASignal**
Namespace for audio signal handling and processing classes.
- **MHAWindow**
Collection of Window types.

Classes

- struct **mha_wave_t**
Waveform signal structure.
- struct **mha_audio_descriptor_t**
*Description of an audio fragment (planned as a replacement of **mhaconfig_t** (p. 905)).*
- struct **mha_audio_t**
*An audio fragment in the openMHA (planned as a replacement of **mha_wave_t** (p. 894) and **mha_spec_t** (p. 848)).*
- class **MHASignal::spectrum_t**
*a signal processing class for spectral data (based on **mha_spec_t** (p. 848))*
- class **MHASignal::waveform_t**
*signal processing class for waveform data (based on **mha_wave_t** (p. 894))*
- class **MHASignal::doublebuffer_t**
Double-buffering class.
- class **MHASignal::hilbert_t**
Hilbert transformation of a waveform segment.
- class **MHASignal::minphase_t**
Minimal phase function.
- class **MHASignal::uint_vector_t**
Vector of unsigned values, used for size and index description of n-dimensional matrixes.

- class **MHASignal::matrix_t**
n-dimensional matrix with real or complex floating point values.
- class **MHAParser::window_t**
MHA configuration interface for a window function generator.
- class **MHASignal::delay_wave_t**
Delayline containing wave fragments.
- class **MHASignal::async_rmslevel_t**
Class for asynchronous level metering.

Typedefs

- typedef float **mha_real_t**
openMHA type for real numbers

Functions

- **mha_wave_t range** (**mha_wave_t** s, unsigned int k0, unsigned int len)
Return a time interval from a waveform chunk.
- **mha_spec_t channels** (**mha_spec_t** s, unsigned int ch_start, unsigned int nch)
Return a channel interval from a spectrum.
- **mha_real_t MHASignal::bin2freq** (**mha_real_t** bin, unsigned fftlen, **mha_real_t** ←
t srate)
conversion from fft bin index to frequency
- **mha_real_t MHASignal::freq2bin** (**mha_real_t** freq, unsigned fftlen, **mha_real_t** ←
t srate)
conversion from frequency to fft bin index
- **mha_real_t MHASignal::smp2rad** (**mha_real_t** samples, unsigned bin, unsigned
fftlen)
conversion from delay in samples to phase shift
- **mha_real_t MHASignal::rad2smp** (**mha_real_t** phase_shift, unsigned bin, unsigned
fftlen)
conversion from phase shift to delay in samples
- template<class elem_type >
std::vector< elem_type > **MHASignal::dupvec** (std::vector< elem_type > vec, unsigned
n)
Duplicate last vector element to match desired size.
- template<class elem_type >
std::vector< elem_type > **MHASignal::dupvec_chk** (std::vector< elem_type > vec, un-
signed n)
Duplicate last vector element to match desired size, check for dimension.
- bool **equal_dim** (const **mha_wave_t** &a, const **mha_wave_t** &b)
Test for equal dimension of waveform structures.
- bool **equal_dim** (const **mha_wave_t** &a, const **mhaconfig_t** &b)
Test for match of waveform dimension with mhaconfig structure.

- bool **equal_dim** (const **mha_spec_t** &a, const **mha_spec_t** &b)
Test for equal dimension of spectrum structures.
- bool **equal_dim** (const **mha_spec_t** &a, const **mhaconfig_t** &b)
Test for match of spectrum dimension with mhaconfig structure.
- bool **equal_dim** (const **mha_wave_t** &a, const **mha_spec_t** &b)
Test for equal dimension of waveform/spectrum structures.
- bool **equal_dim** (const **mha_spec_t** &a, const **mha_wave_t** &b)
Test for equal dimension of waveform/spectrum structures.
- void **integrate** (**mha_wave_t** &s)
Numeric integration of a signal vector (real values)
- void **integrate** (**mha_spec_t** &s)
Numeric integration of a signal vector (complex values)
- unsigned int **size** (const **mha_wave_t** &s)
Return size of a waveform structure.
- unsigned int **size** (const **mha_spec_t** &s)
Return size of a spectrum structure.
- unsigned int **size** (const **mha_wave_t** *s)
Return size of a waveform structure.
- unsigned int **size** (const **mha_spec_t** *s)
Return size of a spectrum structure.
- void **clear** (**mha_wave_t** &s)
Set all values of waveform to zero.
- void **clear** (**mha_wave_t** *s)
Set all values of waveform to zero.
- void **clear** (**mha_spec_t** &s)
Set all values of spectrum to zero.
- void **clear** (**mha_spec_t** *s)
Set all values of spectrum to zero.
- void **assign** (**mha_wave_t** self, **mha_real_t** val)
Set all values of waveform 'self' to 'val'.
- void **assign** (**mha_wave_t** self, const **mha_wave_t** &val)
Set all values of waveform 'self' to 'val'.
- void **assign** (**mha_spec_t** self, const **mha_spec_t** &val)
Set all values of spectrum 'self' to 'val'.
- void **timeshift** (**mha_wave_t** &self, int shift)
Time shift of waveform chunk.
- **mha_real_t** & **value** (**mha_wave_t** *s, unsigned int fr, unsigned int ch)
Access an element of a waveform structure.
- const **mha_real_t** & **value** (const **mha_wave_t** *s, unsigned int fr, unsigned int ch)
Constant access to an element of a waveform structure.
- **mha_complex_t** & **value** (**mha_spec_t** *s, unsigned int fr, unsigned int ch)
Access to an element of a spectrum.
- const **mha_complex_t** & **value** (const **mha_spec_t** *s, unsigned int fr, unsigned int ch)
Constant access to an element of a spectrum.
- **mha_real_t** & **value** (**mha_wave_t** &s, unsigned int fr, unsigned int ch)

- Access to an element of a waveform structure.*

 - `const mha_real_t & value` (`const mha_wave_t &s`, unsigned int fr, unsigned int ch)

Constant access to an element of a waveform structure.
- `mha_complex_t & value` (`mha_spec_t &s`, unsigned int fr, unsigned int ch)

Access to an element of a spectrum.
- `const mha_complex_t & value` (`const mha_spec_t &s`, unsigned int fr, unsigned int ch)

Constant access to an element of a spectrum.
- `std::vector< float > std_vector_float` (`const mha_wave_t &`)

Converts a `mha_wave_t` (p. 894) structure into a `std::vector<float>` (interleaved order).
- `std::vector< std::vector< float > > std_vector_vector_float` (`const mha_wave_t &`)

Converts a `mha_wave_t` (p. 894) structure into a `std::vector< std::vector<float> >` (outer vector represents channels).
- `std::vector< std::vector< mha_complex_t > > std_vector_vector_complex` (`const mha_spec_t &`)

Converts a `mha_spec_t` (p. 848) structure into a `std::vector< std::vector<mha_complex_t> >` (outer vector represents channels).
- `mha_wave_t & operator+=` (`mha_wave_t &`, `const mha_real_t &`)

Addition operator.
- `mha_wave_t & operator+=` (`mha_wave_t &`, `const mha_wave_t &`)

Addition operator.
- `mha_wave_t & operator-=` (`mha_wave_t &`, `const mha_wave_t &`)

Subtraction operator.
- `mha_spec_t & operator-=` (`mha_spec_t &`, `const mha_spec_t &`)

Subtraction operator.
- `mha_wave_t & operator*=` (`mha_wave_t &`, `const mha_real_t &`)

Element-wise multiplication operator.
- `mha_wave_t & operator*=` (`mha_wave_t &`, `const mha_wave_t &`)

Element-wise multiplication operator.
- `mha_spec_t & operator*=` (`mha_spec_t &`, `const mha_real_t &`)

Element-wise multiplication operator.
- `mha_spec_t & operator*=` (`mha_spec_t &`, `const mha_wave_t &`)

Element-wise multiplication operator.
- `mha_spec_t & operator*=` (`mha_spec_t &`, `const mha_spec_t &`)

Element-wise multiplication operator.
- `mha_spec_t & operator/=` (`mha_spec_t &`, `const mha_spec_t &`)

Element-wise division operator.
- `mha_wave_t & operator/=` (`mha_wave_t &`, `const mha_wave_t &`)

Element-wise division operator.
- `mha_spec_t & operator+=` (`mha_spec_t &`, `const mha_spec_t &`)

Addition operator.
- `mha_spec_t & operator+=` (`mha_spec_t &`, `const mha_real_t &`)

Addition operator.
- `mha_wave_t & operator^=` (`mha_wave_t &self`, `const mha_real_t &arg`)

Exponent operator.

- void **MHASignal::copy_channel** (**mha_spec_t** &self, const **mha_spec_t** &src, unsigned sch, unsigned dch)
Copy one channel of a source signal.
- void **MHASignal::copy_channel** (**mha_wave_t** &self, const **mha_wave_t** &src, unsigned src_channel, unsigned dest_channel)
Copy one channel of a source signal.
- **mha_real_t MHASignal::rmslevel** (const **mha_spec_t** &s, unsigned int channel, unsigned int fftlen)
Return RMS level of a spectrum channel.
- **mha_real_t MHASignal::colored_intensity** (const **mha_spec_t** &s, unsigned int channel, unsigned int fftlen, **mha_real_t** *sqfreq_response=NULLPTR)
Colored spectrum intensity.
- **mha_real_t MHASignal::maxabs** (const **mha_spec_t** &s, unsigned int channel)
Find maximal absolute value.
- **mha_real_t MHASignal::rmslevel** (const **mha_wave_t** &s, unsigned int channel)
Return RMS level of a waveform channel.
- **mha_real_t MHASignal::maxabs** (const **mha_wave_t** &s, unsigned int channel)
Find maximal absolute value.
- **mha_real_t MHASignal::maxabs** (const **mha_wave_t** &s)
Find maximal absolute value.
- **mha_real_t MHASignal::max** (const **mha_wave_t** &s)
Find maximal value.
- **mha_real_t MHASignal::min** (const **mha_wave_t** &s)
Find minimal value.
- **mha_real_t MHASignal::sumsqr_channel** (const **mha_wave_t** &s, unsigned int channel)
Calculate sum of squared values in one channel.
- **mha_real_t MHASignal::sumsqr_frame** (const **mha_wave_t** &s, unsigned int frame)
Calculate sum over all channels of squared values.
- void **conjugate** (**mha_spec_t** &self)
*Replace (!) the value of this **mha_spec_t** (p. 848) with its conjugate.*

3.8.1 Detailed Description

The vector and matrix processing toolbox consists of a number of classes defined in the namespace **MHASignal** (p. 137), and many functions and operators for use with the structures **mha_↔_wave_t** (p. 894) and **mha_spec_t** (p. 848).

3.8.2 Typedef Documentation

3.8.2.1 `mha_real_t` `typedef float mha_real_t`

openMHA type for real numbers

This type is expected to be always the C-type 'float' (IEEE 754 single).

3.8.3 Function Documentation

3.8.3.1 `range()` `mha_wave_t range (` `mha_wave_t s,` `unsigned int k0,` `unsigned int len)`

Return a time interval from a waveform chunk.

A waveform chunk containing a time interval of a larger waveform chunk is returned. The number of channels remains constant. The data of the output waveform structure points to the data of the input structure, i.e., write access to the output waveform chunk modifies the corresponding entries in the input chunk.

Parameters

<code>s</code>	Waveform structure
<code>k0</code>	Index of first value in output
<code>len</code>	Number of frames in output

Returns

Waveform structure representing the sub-interval.

3.8.3.2 `channels()` `mha_spec_t channels (` `mha_spec_t s,` `unsigned int ch_start,` `unsigned int nch)`

Return a channel interval from a spectrum.

Parameters

<i>s</i>	Input spectrum
<i>ch_start</i>	Index of first channel in output
<i>nch</i>	Number of channels in output

Returns

Spectrum structure representing the sub-interval.

3.8.3.3 bin2freq() `mha_real_t MHASignal::bin2freq (`
`mha_real_t bin,`
`unsigned fftlen,`
`mha_real_t srate) [inline]`

conversion from fft bin index to frequency

Parameters

<i>bin</i>	index of fft bin, index 0 has dc
<i>fftlen</i>	FFT length
<i>srate</i>	sampling frequency / Hz

Returns

frequency of fft bin / Hz

3.8.3.4 freq2bin() `mha_real_t MHASignal::freq2bin (`
`mha_real_t freq,`
`unsigned fftlen,`
`mha_real_t srate) [inline]`

conversion from frequency to fft bin index

Parameters

<i>freq</i>	frequency / Hz
<i>fftlen</i>	FFT length
<i>srate</i>	sampling frequency / Hz

Returns

0-based index of fft bin, generally has non-zero fractional part

```
3.8.3.5 smp2rad()  mha_real_t MHA_Signal::smp2rad (
    mha_real_t samples,
    unsigned bin,
    unsigned fftlen ) [inline]
```

conversion from delay in samples to phase shift

Compute phase shift that needs to be applied to fft spectrum to achieve the desired delay.

Parameters

<i>samples</i>	delay in samples. Positive delay: shift current signal to future.
<i>bin</i>	index of fft bin, index 0 has dc (index 0 and nyquist bin cannot be delayed)
<i>fftlen</i>	FFT length

Returns

The phase shift in radiant that needs to be applied to fft bin to achieve the desired delay. A positive delay requires a negative phase shift. If required phase shift is $>\pi$ or $<-\pi$, then the desired delay cannot be applied in the fft domain with given parameters. Required phase shifts close to π should not be used. If bin is 0 or nyquist, returns 0 phase shift.

```
3.8.3.6 rad2smp()  mha_real_t MHA_Signal::rad2smp (
    mha_real_t phase_shift,
    unsigned bin,
    unsigned fftlen ) [inline]
```

conversion from phase shift to delay in samples

Compute delay in samples that is achieved by a phase shift.

Parameters

<i>phase_shift</i>	phase shift in radiant
<i>bin</i>	index of fft bin, index 0 has dc (index 0 and nyquist bin cannot be delayed)
<i>fftlen</i>	FFT length

Returns

The delay in samples achieved by applying the phase shift. A negative phase shift causes a positive delay: shifts current signal to future.

```
3.8.3.7 dupvec()  template<class elem_type >
std::vector<elem_type> MHASignal::dupvec (
    std::vector< elem_type > vec,
    unsigned n )
```

Duplicate last vector element to match desired size.

Parameters

<i>vec</i>	Input vector.
<i>n</i>	Target number of elements.

Return values

<i>Resized</i>	vector.
----------------	---------

```
3.8.3.8 dupvec_chk()  template<class elem_type >
std::vector<elem_type> MHASignal::dupvec_chk (
    std::vector< elem_type > vec,
    unsigned n )
```

Duplicate last vector element to match desired size, check for dimension.

The input dimension can be either 1 or the target length.

Parameters

<i>vec</i>	Input vector.
<i>n</i>	Target number of elements.

Return values

<i>Resized</i>	vector.
----------------	---------

3.8.3.9 equal_dim() [1/6] `bool equal_dim (`
 `const mha_wave_t & a,`
 `const mha_wave_t & b) [inline]`

Test for equal dimension of waveform structures.

3.8.3.10 equal_dim() [2/6] `bool equal_dim (`
 `const mha_wave_t & a,`
 `const mhaconfig_t & b) [inline]`

Test for match of waveform dimension with mhaconfig structure.

3.8.3.11 equal_dim() [3/6] `bool equal_dim (`
 `const mha_spec_t & a,`
 `const mha_spec_t & b) [inline]`

Test for equal dimension of spectrum structures.

3.8.3.12 equal_dim() [4/6] `bool equal_dim (`
 `const mha_spec_t & a,`
 `const mhaconfig_t & b) [inline]`

Test for match of spectrum dimension with mhaconfig structure.

3.8.3.13 equal_dim() [5/6] `bool equal_dim (`
 `const mha_wave_t & a,`
 `const mha_spec_t & b) [inline]`

Test for equal dimension of waveform/spectrum structures.

Warning

Waveform structures `mha_wave_t` (p. 894) use interleaved data order, while spectrum structures `mha_spec_t` (p. 848) use non-interleaved.

```
3.8.3.14 equal_dim() [6/6] bool equal_dim (  
    const mha_spec_t & a,  
    const mha_wave_t & b ) [inline]
```

Test for equal dimension of waveform/spectrum structures.

Warning

Waveform structures **mha_wave_t** (p. 894) use interleaved data order, while spectrum structures **mha_spec_t** (p. 848) use non-interleaved.

```
3.8.3.15 integrate() [1/2] void integrate (  
    mha_wave_t & s )
```

Numeric integration of a signal vector (real values)

Parameters

s	Input signal vector
---	---------------------

```
3.8.3.16 integrate() [2/2] void integrate (  
    mha_spec_t & s )
```

Numeric integration of a signal vector (complex values)

Parameters

s	Input signal vector
---	---------------------

```
3.8.3.17 size() [1/4] unsigned int size (  
    const mha_wave_t & s ) [inline]
```

Return size of a waveform structure.

3.8.3.18 size() [2/4] unsigned int size (
 const **mha_spec_t** & s) [inline]

Return size of a spectrum structure.

3.8.3.19 size() [3/4] unsigned int size (
 const **mha_wave_t** * s) [inline]

Return size of a waveform structure.

3.8.3.20 size() [4/4] unsigned int size (
 const **mha_spec_t** * s) [inline]

Return size of a spectrum structure.

3.8.3.21 clear() [1/4] void clear (
 mha_wave_t & s) [inline]

Set all values of waveform to zero.

3.8.3.22 clear() [2/4] void clear (
 mha_wave_t * s) [inline]

Set all values of waveform to zero.

3.8.3.23 clear() [3/4] void clear (
 mha_spec_t & s) [inline]

Set all values of spectrum to zero.

3.8.3.24 clear() [4/4] void clear (
 mha_spec_t * s) [inline]

Set all values of spectrum to zero.

3.8.3.25 assign() [1/3] void assign (
 mha_wave_t self,
 mha_real_t val) [inline]

Set all values of waveform 'self' to 'val'.

Parameters

<i>self</i>	Waveform to be modified.
<i>val</i>	Value to be assigned to all entries of waveform.

3.8.3.26 assign() [2/3] `void assign (`
`mha_wave_t self,`
`const mha_wave_t & val)`

Set all values of waveform 'self' to 'val'.

Parameters

<i>self</i>	Waveform to be modified.
<i>val</i>	Source waveform structure.

3.8.3.27 assign() [3/3] `void assign (`
`mha_spec_t self,`
`const mha_spec_t & val)`

Set all values of spectrum 'self' to 'val'.

Parameters

<i>self</i>	Spectrum to be modified.
<i>val</i>	Source spectrum.

3.8.3.28 timeshift() `void timeshift (`
`mha_wave_t & self,`
`int shift)`

Time shift of waveform chunk.

Shifted areas are filled with zeros.

Parameters

<i>self</i>	Waveform chunk to be shifted
<i>shift</i>	Shift amount, positive values shift to later times

3.8.3.29 value() [1/8] `mha_real_t& value (`
`mha_wave_t * s,`
`unsigned int fr,`
`unsigned int ch) [inline]`

Access an element of a waveform structure.

Parameters

<i>s</i>	Waveform structure
<i>fr</i>	Frame number
<i>ch</i>	Channel number

Returns

Reference to element

3.8.3.30 value() [2/8] `const mha_real_t& value (`
`const mha_wave_t * s,`
`unsigned int fr,`
`unsigned int ch) [inline]`

Constant access to an element of a waveform structure.

Parameters

<i>s</i>	Waveform structure
<i>fr</i>	Frame number
<i>ch</i>	Channel number

Returns

Reference to element

3.8.3.31 value() [3/8] `mha_complex_t& value (`
`mha_spec_t * s,`
`unsigned int fr,`
`unsigned int ch) [inline]`

Access to an element of a spectrum.

Parameters

<i>s</i>	Spectrum structure
<i>fr</i>	Bin number
<i>ch</i>	Channel number

Returns

Reference to element

3.8.3.32 value() [4/8] `const mha_complex_t& value (`
`const mha_spec_t * s,`
`unsigned int fr,`
`unsigned int ch) [inline]`

Constant access to an element of a spectrum.

Parameters

<i>s</i>	Spectrum structure
<i>fr</i>	Bin number
<i>ch</i>	Channel number

Returns

Reference to element

3.8.3.33 value() [5/8] `mha_real_t& value (`
`mha_wave_t & s,`
`unsigned int fr,`
`unsigned int ch) [inline]`

Access to an element of a waveform structure.

Parameters

<i>s</i>	Waveform structure
<i>fr</i>	Frame number
<i>ch</i>	Channel number

Returns

Reference to element

```
3.8.3.34 value() [6/8] const mha_real_t& value (
    const mha_wave_t & s,
    unsigned int fr,
    unsigned int ch ) [inline]
```

Constant access to an element of a waveform structure.

Parameters

<i>s</i>	Waveform structure
<i>fr</i>	Frame number
<i>ch</i>	Channel number

Returns

Reference to element

```
3.8.3.35 value() [7/8] mha_complex_t& value (
    mha_spec_t & s,
    unsigned int fr,
    unsigned int ch ) [inline]
```

Access to an element of a spectrum.

Parameters

<i>s</i>	Spectrum structure
<i>fr</i>	Bin number
<i>ch</i>	Channel number

Returns

Reference to element

```
3.8.3.36 value() [8/8] const mha_complex_t& value (
    const mha_spec_t & s,
    unsigned int fr,
    unsigned int ch ) [inline]
```

Constant access to an element of a spectrum.

Parameters

<i>s</i>	Spectrum structure
<i>fr</i>	Bin number
<i>ch</i>	Channel number

Returns

Reference to element

```
3.8.3.37 std_vector_float() std::vector<float> std_vector_float (
    const mha_wave_t & )
```

Converts a **mha_wave_t** (p. 894) structure into a `std::vector<float>` (interleaved order).**Warning**

This function is not real-time safe. Do not use in signal processing thread.

```
3.8.3.38 std_vector_vector_float() std::vector<std::vector<float> > std_vector_↵
vector_float (
    const mha_wave_t & )
```

Converts a **mha_wave_t** (p. 894) structure into a `std::vector< std::vector<float> >` (outer vector represents channels).**Warning**

This function is not real-time safe. Do not use in signal processing thread.

3.8.3.39 std_vector_vector_complex() `std::vector<std::vector< mha_complex_t > >`
`std_vector_vector_complex (`
 `const mha_spec_t &)`

Converts a **mha_spec_t** (p. 848) structure into a `std::vector< std::vector<mha_complex_t> >`
 (outer vector represents channels).

Warning

This function is not real-time safe. Do not use in signal processing thread.

3.8.3.40 operator+=() [1/4] `mha_wave_t& operator+= (`
 `mha_wave_t & ,`
 `const mha_real_t &)`

Addition operator.

3.8.3.41 operator+=() [2/4] `mha_wave_t& operator+= (`
 `mha_wave_t & ,`
 `const mha_wave_t &)`

Addition operator.

3.8.3.42 operator-=() [1/2] `mha_wave_t& operator-= (`
 `mha_wave_t & ,`
 `const mha_wave_t &)`

Subtraction operator.

3.8.3.43 operator-=() [2/2] `mha_spec_t& operator-= (`
 `mha_spec_t & ,`
 `const mha_spec_t &)`

Subtraction operator.

3.8.3.44 operator*=() [1/5] `mha_wave_t& operator*= (`
 `mha_wave_t & ,`
 `const mha_real_t &)`

Element-wise multiplication operator.

3.8.3.45 operator*=() [2/5] `mha_wave_t& operator*= (`
 `mha_wave_t & ,`
 `const mha_wave_t &)`

Element-wise multiplication operator.

3.8.3.46 operator*=() [3/5] `mha_spec_t& operator*= (`
 `mha_spec_t & ,`
 `const mha_real_t &)`

Element-wise multiplication operator.

3.8.3.47 operator*=() [4/5] `mha_spec_t& operator*= (`
 `mha_spec_t & ,`
 `const mha_wave_t &)`

Element-wise multiplication operator.

3.8.3.48 operator*=() [5/5] `mha_spec_t& operator*= (`
 `mha_spec_t & ,`
 `const mha_spec_t &)`

Element-wise multiplication operator.

3.8.3.49 operator/=() [1/2] `mha_spec_t& operator/= (`
`mha_spec_t & ,`
`const mha_spec_t &)`

Element-wise division operator.

3.8.3.50 operator/=() [2/2] `mha_wave_t& operator/= (`
`mha_wave_t & ,`
`const mha_wave_t &)`

Element-wise division operator.

3.8.3.51 operator+=() [3/4] `mha_spec_t& operator+= (`
`mha_spec_t & ,`
`const mha_spec_t &)`

Addition operator.

3.8.3.52 operator+=() [4/4] `mha_spec_t& operator+= (`
`mha_spec_t & ,`
`const mha_real_t &)`

Addition operator.

3.8.3.53 operator^=() `mha_wave_t& operator^= (`
`mha_wave_t & self,`
`const mha_real_t & arg)`

Exponent operator.

Warning

This overwrites the xor operator!

3.8.3.54 copy_channel() [1/2] `void MHASignal::copy_channel (`
`mha_spec_t & self,`
`const mha_spec_t & src,`
`unsigned sch,`
`unsigned dch)`

Copy one channel of a source signal.

Parameters

<i>self</i>	Destination.
<i>src</i>	Source
<i>sch</i>	Source channel number
<i>dch</i>	Destination channel number

3.8.3.55 copy_channel() [2/2] `void MHASignal::copy_channel (`
`mha_wave_t & self,`
`const mha_wave_t & src,`
`unsigned src_channel,`
`unsigned dest_channel)`

Copy one channel of a source signal.

Parameters

<i>self</i>	Destination.
<i>src</i>	Source
<i>src_channel</i>	Source channel number
<i>dest_channel</i>	Destination channel number

3.8.3.56 rmslevel() [1/2] `mha_real_t MHASignal::rmslevel (`
`const mha_spec_t & s,`
`unsigned int channel,`
`unsigned int fftlen)`

Return RMS level of a spectrum channel.

Computes the RMS level of the signal in Pascal in the given channel.

Takes into account the the negative frequency bins that are not stored (**Central Calibration** (p. 3)).

Parameters

<i>s</i>	Input spectrum
<i>channel</i>	Channel number to be tested
<i>fftlen</i>	FFT length (to correctly count the level of the Nyquist bin)

Returns

RMS level in Pa

3.8.3.57 colored_intensity() `mha_real_t MHASignal::colored_intensity (`
`const mha_spec_t & s,`
`unsigned int channel,`
`unsigned int fftlen,`
`mha_real_t * sqfreq_response = nullptr)`

Colored spectrum intensity.

computes the squared sum of the spectrum after filtering with the frequency response. Takes into account the negative frequency bins that are not stored (**Central Calibration** (p.3)).

Parameters

<i>s</i>	Input spectrum
<i>channel</i>	Channel number to be tested
<i>fftlen</i>	FFT length (to correctly count the level of the Nyquist bin)
<i>sqfreq_response</i>	An array with one squared weighting factor for every fft bin. Array length must be equal to <code>s->num_frames</code> . <code>nullptr</code> can be given for equal weighting of all frequencies.

Returns

sum of squares. Root of this is the colored level in Pa

3.8.3.58 maxabs() [1/3] `mha_real_t MHASignal::maxabs (`
`const mha_spec_t & s,`
`unsigned int channel)`

Find maximal absolute value.

Parameters

<i>s</i>	Input signal
<i>channel</i>	Channel to be tested

Returns

maximum absolute value

3.8.3.59 rmslevel() [2/2] `mha_real_t` MHASignal::rmslevel (
 const `mha_wave_t` & *s*,
 unsigned int *channel*)

Return RMS level of a waveform channel.

Parameters

<i>s</i>	Input waveform signal
<i>channel</i>	Channel number to be tested

Returns

RMS level in Pa

3.8.3.60 maxabs() [2/3] `mha_real_t` MHASignal::maxabs (
 const `mha_wave_t` & *s*,
 unsigned int *channel*)

Find maximal absolute value.

Parameters

<i>s</i>	Input signal
<i>channel</i>	Channel to be tested

Returns

maximum absolute value

3.8.3.61 maxabs() [3/3] `mha_real_t` MHASignal::maxabs (
 const `mha_wave_t` & *s*)

Find maximal absolute value.

Parameters

s	Input signal
---	--------------

Returns

maximum absolute value

3.8.3.62 max() `mha_real_t MHASignal::max (`
`const mha_wave_t & s)`

Find maximal value.

Parameters

s	Input signal
---	--------------

Returns

maximum absolute value

3.8.3.63 min() `mha_real_t MHASignal::min (`
`const mha_wave_t & s)`

Find minimal value.

Parameters

s	Input signal
---	--------------

Returns

maximum absolute value

3.8.3.64 sumsqr_channel() `mha_real_t MHA_Signal::sumsqr_channel (`
`const mha_wave_t & s,`
`unsigned int channel)`

Calculate sum of squared values in one channel.

Parameters

<code>s</code>	Input signal
<code>channel</code>	Channel

Returns

$$\sum x^2$$

3.8.3.65 sumsqr_frame() `mha_real_t MHA_Signal::sumsqr_frame (`
`const mha_wave_t & s,`
`unsigned int frame)`

Calculate sum over all channels of squared values.

Parameters

<code>s</code>	Input signal
<code>frame</code>	Frame number

Returns

$$\sum x^2$$

3.8.3.66 conjugate() `void conjugate (`
`mha_spec_t & self) [inline]`

Replace (!) the value of this `mha_spec_t` (p. 848) with its conjugate.

3.9 Complex arithmetics in the openMHA

Collaboration diagram for Complex arithmetics in the openMHA:

Classes

- struct **mha_complex_t**
Type for complex floating point values.

Functions

- **mha_complex_t & set (mha_complex_t &self, mha_real_t real, mha_real_t imag=0)**
*Assign real and imaginary parts to a **mha_complex_t** (p. 799) variable.*
- **mha_complex_t mha_complex (mha_real_t real, mha_real_t imag=0)**
*Create a new **mha_complex_t** (p. 799) with specified real and imaginary parts.*
- **mha_complex_t & set (mha_complex_t &self, const std::complex< mha_real_t > & stdcomplex)**
*Assign a **mha_complex_t** (p. 799) variable from a **std::complex**.*
- **std::complex< mha_real_t > stdcomplex (const mha_complex_t &self)**
*Create a **std::complex** from **mha_complex_t** (p. 799).*
- **mha_complex_t & expi (mha_complex_t &self, mha_real_t angle)**
*replaces the value of the given **mha_complex_t** (p. 799) with $\exp(i*b)$.*
- **double angle (const mha_complex_t &self)**
Computes the angle of a complex number in the complex plane.
- **mha_complex_t & operator+= (mha_complex_t &self, const mha_complex_t &other)**
Addition of two complex numbers, overwriting the first.
- **mha_complex_t operator+ (const mha_complex_t &self, const mha_complex_t &other)**
Addition of two complex numbers, result is a temporary object.
- **mha_complex_t & operator+= (mha_complex_t &self, mha_real_t other_real)**
Addition of a complex and a real number, overwriting the complex.
- **mha_complex_t operator+ (const mha_complex_t &self, mha_real_t other_real)**
Addition of a complex and a real number, result is a temporary object.

- **mha_complex_t & operator-=** (**mha_complex_t** &self, const **mha_complex_t** &other)
Subtraction of two complex numbers, overwriting the first.
- **mha_complex_t operator-** (const **mha_complex_t** &self, const **mha_complex_t** &other)
Subtraction of two complex numbers, result is a temporary object.
- **mha_complex_t & operator-=** (**mha_complex_t** &self, **mha_real_t** other_real)
Subtraction of a complex and a real number, overwriting the complex.
- **mha_complex_t operator-** (const **mha_complex_t** &self, **mha_real_t** other_real)
Subtraction of a complex and a real number, result is a temporary object.
- **mha_complex_t & operator* =** (**mha_complex_t** &self, const **mha_complex_t** &other)
Multiplication of two complex numbers, overwriting the first.
- **mha_complex_t operator*** (const **mha_complex_t** &self, const **mha_complex_t** &other)
Multiplication of two complex numbers, result is a temporary object.
- **mha_complex_t & operator* =** (**mha_complex_t** &self, **mha_real_t** other_real)
Multiplication of a complex and a real number, overwriting the complex.
- **mha_complex_t & expi** (**mha_complex_t** &self, **mha_real_t** angle, **mha_real_t** factor)
*replaces (!) the value of the given **mha_complex_t** (p. 799) with $a * \exp(i*b)$*
- **mha_complex_t operator*** (const **mha_complex_t** &self, **mha_real_t** other_real)
Multiplication of a complex and a real number, result is a temporary object.
- **mha_real_t abs2** (const **mha_complex_t** &self)
Compute the square of the absolute value of a complex value.
- **mha_real_t abs** (const **mha_complex_t** &self)
Compute the absolute value of a complex value.
- **mha_complex_t & operator/=** (**mha_complex_t** &self, **mha_real_t** other_real)
Division of a complex and a real number, overwriting the complex.
- **mha_complex_t operator/** (const **mha_complex_t** &self, **mha_real_t** other_real)
Division of a complex and a real number, result is a temporary object.
- **mha_complex_t & safe_div** (**mha_complex_t** &self, const **mha_complex_t** &other, **mha_real_t** eps, **mha_real_t** eps2)
- **mha_complex_t & operator/=** (**mha_complex_t** &self, const **mha_complex_t** &other)
Division of two complex numbers, overwriting the first.
- **mha_complex_t operator/** (const **mha_complex_t** &self, const **mha_complex_t** &other)
Division of two complex numbers, result is a temporary object.
- **mha_complex_t operator-** (const **mha_complex_t** &self)
Unary minus on a complex results in a negative temporary object.
- bool **operator==** (const **mha_complex_t** &x, const **mha_complex_t** &y)
Compare two complex numbers for equality.
- bool **operator!=** (const **mha_complex_t** &x, const **mha_complex_t** &y)
Compare two complex numbers for inequality.
- void **conjugate** (**mha_complex_t** &self)
*Replace (!) the value of this **mha_complex_t** (p. 799) with its conjugate.*
- **mha_complex_t _conjugate** (const **mha_complex_t** &self)

- Compute the conjugate of this complex value.*
- void **reciprocal** (**mha_complex_t** &self)
 - Replace the value of this complex with its reciprocal.*
- **mha_complex_t** **_reciprocal** (const **mha_complex_t** &self)
 - compute the reciprocal of this complex value.*
- void **normalize** (**mha_complex_t** &self)
 - Divide a complex by its absolute value, thereby normalizing it (projecting onto the unit circle).*
- void **normalize** (**mha_complex_t** &self, **mha_real_t** margin)
 - Divide a complex by its absolute value, thereby normalizing it (projecting onto the unit circle), with a safety margin.*
- bool **almost** (const **mha_complex_t** &self, const **mha_complex_t** &other, **mha_real_t** times_epsilon=1e2)
 - Compare two complex numbers for equality except for a small relative error.*
- bool **operator<** (const **mha_complex_t** &x, const **mha_complex_t** &y)
 - Compares the absolute values of two complex numbers.*

3.9.1 Detailed Description

3.9.2 Function Documentation

3.9.2.1 set() [1/2] **mha_complex_t**& set (
 mha_complex_t & self,
 mha_real_t real,
 mha_real_t imag = 0) [inline]

Assign real and imaginary parts to a **mha_complex_t** (p. 799) variable.

Parameters

<i>self</i>	The mha_complex_t (p. 799) variable whose value is about to change.
<i>real</i>	The new real part.
<i>imag</i>	The new imaginary part.

Returns

A reference to the changed variable.

```
3.9.2.2 mha_complex() mha_complex_t mha_complex (
    mha_real_t real,
    mha_real_t imag = 0 ) [inline]
```

Create a new `mha_complex_t` (p. 799) with specified real and imaginary parts.

Parameters

<i>real</i>	The real part.
<i>imag</i>	The imaginary part.

Returns

The new value.

```
3.9.2.3 set() [2/2] mha_complex_t& set (
    mha_complex_t & self,
    const std::complex< mha_real_t > & stdcomplex ) [inline]
```

Assign a `mha_complex_t` (p. 799) variable from a `std::complex`.

Parameters

<i>self</i>	The <code>mha_complex_t</code> (p. 799) variable whose value is about to change.
<i>stdcomplex</i>	The new complex value.

Returns

A reference to the changed variable.

```
3.9.2.4 stdcomplex() std::complex< mha_real_t> stdcomplex (
    const mha_complex_t & self ) [inline]
```

Create a `std::complex` from `mha_complex_t` (p. 799).

```
3.9.2.5 expi() [1/2] mha_complex_t& expi (
    mha_complex_t & self,
    mha_real_t angle ) [inline]
```

replaces the value of the given `mha_complex_t` (p. 799) with $\exp(i*b)$.

Parameters

<i>self</i>	The <code>mha_complex_t</code> (p. 799) variable whose value is about to change.
<i>angle</i>	The angle in the complex plane [rad].

Returns

A reference to the changed variable.

```
3.9.2.6 angle() double angle (
    const mha_complex_t & self ) [inline]
```

Computes the angle of a complex number in the complex plane.

Parameters

<i>self</i>	The complex number whose angle is needed.
-------------	---

Returns

The angle of a complex number in the complex plane.

```
3.9.2.7 operator+=() [1/2] mha_complex_t& operator+= (
    mha_complex_t & self,
    const mha_complex_t & other ) [inline]
```

Addition of two complex numbers, overwriting the first.

```
3.9.2.8 operator+() [1/2] mha_complex_t operator+ (
    const mha_complex_t & self,
    const mha_complex_t & other ) [inline]
```

Addition of two complex numbers, result is a temporary object.

```
3.9.2.9 operator+=() [2/2] mha_complex_t& operator+= (  
    mha_complex_t & self,  
    mha_real_t other_real ) [inline]
```

Addition of a complex and a real number, overwriting the complex.

```
3.9.2.10 operator+() [2/2] mha_complex_t operator+ (  
    const mha_complex_t & self,  
    mha_real_t other_real ) [inline]
```

Addition of a complex and a real number, result is a temporary object.

```
3.9.2.11 operator-=() [1/2] mha_complex_t& operator-= (  
    mha_complex_t & self,  
    const mha_complex_t & other ) [inline]
```

Subtraction of two complex numbers, overwriting the first.

```
3.9.2.12 operator-() [1/3] mha_complex_t operator- (  
    const mha_complex_t & self,  
    const mha_complex_t & other ) [inline]
```

Subtraction of two complex numbers, result is a temporary object.

```
3.9.2.13 operator-=( ) [2/2] mha_complex_t& operator-=(  
    mha_complex_t & self,  
    mha_real_t other_real ) [inline]
```

Subtraction of a complex and a real number, overwriting the complex.

3.9.2.14 operator-() [2/3] `mha_complex_t` operator- (
 const `mha_complex_t` & *self*,
 `mha_real_t` *other_real*) [inline]

Subtraction of a complex and a real number, result is a temporary object.

3.9.2.15 operator*=() [1/2] `mha_complex_t&` operator*= (
 `mha_complex_t` & *self*,
 const `mha_complex_t` & *other*) [inline]

Multiplication of two complex numbers, overwriting the first.

3.9.2.16 operator*() [1/2] `mha_complex_t` operator* (
 const `mha_complex_t` & *self*,
 const `mha_complex_t` & *other*) [inline]

Multiplication of two complex numbers, result is a temporary object.

3.9.2.17 operator*=() [2/2] `mha_complex_t&` operator*= (
 `mha_complex_t` & *self*,
 `mha_real_t` *other_real*) [inline]

Multiplication of a complex and a real number, overwriting the complex.

3.9.2.18 expi() [2/2] `mha_complex_t&` expi (
 `mha_complex_t` & *self*,
 `mha_real_t` *angle*,
 `mha_real_t` *factor*) [inline]

replaces (!) the value of the given `mha_complex_t` (p. 799) with a * exp(i*b)

Parameters

<i>self</i>	The <code>mha_complex_t</code> (p. 799) variable whose value is about to change.
<i>angle</i>	The imaginary exponent.
<i>factor</i>	The absolute value of the result.

Returns

A reference to the changed variable.

```
3.9.2.19 operator*() [2/2] mha_complex_t operator* (  
const mha_complex_t & self,  
mha_real_t other_real ) [inline]
```

Multiplication of a complex and a real number, result is a temporary object.

```
3.9.2.20 abs2() mha_real_t abs2 (  
const mha_complex_t & self ) [inline]
```

Compute the square of the absolute value of a complex value.

Returns

The square of the absolute value of self.

```
3.9.2.21 abs() mha_real_t abs (  
const mha_complex_t & self ) [inline]
```

Compute the absolute value of a complex value.

Returns

The absolute value of self.

```
3.9.2.22 operator/=(()) [1/2] mha_complex_t& operator/=(  
mha_complex_t & self,  
mha_real_t other_real ) [inline]
```

Division of a complex and a real number, overwriting the complex.

3.9.2.23 operator/() [1/2] `mha_complex_t operator/ (`
`const mha_complex_t & self,`
`mha_real_t other_real) [inline]`

Division of a complex and a real number, result is a temporary object.

3.9.2.24 safe_div() `mha_complex_t& safe_div (`
`mha_complex_t & self,`
`const mha_complex_t & other,`
`mha_real_t eps,`
`mha_real_t eps2) [inline]`

Safe division of two complex numbers, overwriting the first. If $\text{abs}(\text{divisor}) < \text{eps}$, then divisor is replaced by eps . $\text{eps2} = \text{eps} * \text{eps}$.

3.9.2.25 operator/=() [2/2] `mha_complex_t& operator/=(`
`mha_complex_t & self,`
`const mha_complex_t & other) [inline]`

Division of two complex numbers, overwriting the first.

3.9.2.26 operator/() [2/2] `mha_complex_t operator/ (`
`const mha_complex_t & self,`
`const mha_complex_t & other) [inline]`

Division of two complex numbers, result is a temporary object.

3.9.2.27 operator-() [3/3] `mha_complex_t operator- (`
`const mha_complex_t & self) [inline]`

Unary minus on a complex results in a negative temporary object.

```
3.9.2.28 operator==( ) bool operator== (
    const mha_complex_t & x,
    const mha_complex_t & y ) [inline]
```

Compare two complex numbers for equality.

```
3.9.2.29 operator!=( ) bool operator!= (
    const mha_complex_t & x,
    const mha_complex_t & y ) [inline]
```

Compare two complex numbers for inequality.

```
3.9.2.30 conjugate( ) void conjugate (
    mha_complex_t & self ) [inline]
```

Replace (!) the value of this **mha_complex_t** (p. 799) with its conjugate.

```
3.9.2.31 _conjugate( ) mha_complex_t _conjugate (
    const mha_complex_t & self ) [inline]
```

Compute the conjugate of this complex value.

Returns

A temporary object holding the conjugate value.

```
3.9.2.32 reciprocal( ) void reciprocal (
    mha_complex_t & self ) [inline]
```

Replace the value of this complex with its reciprocal.

3.9.2.33 `_reciprocal()` `mha_complex_t _reciprocal (`
`const mha_complex_t & self) [inline]`

compute the reciprocal of this complex value.

Returns

A temporary object holding the reciprocal value.

3.9.2.34 `normalize()` [1/2] `void normalize (`
`mha_complex_t & self) [inline]`

Divide a complex by its absolute value, thereby normalizing it (projecting onto the unit circle).

3.9.2.35 `normalize()` [2/2] `void normalize (`
`mha_complex_t & self,`
`mha_real_t margin) [inline]`

Divide a complex by its absolute value, thereby normalizing it (projecting onto the unit circle), with a safety margin.

3.9.2.36 `almost()` `bool almost (`
`const mha_complex_t & self,`
`const mha_complex_t & other,`
`mha_real_t times_epsilon = 1e2) [inline]`

Compare two complex numbers for equality except for a small relative error.

Parameters

<i>self</i>	The first complex number.
<i>other</i>	The second complex number.
<i>times_epsilon</i>	Permitted relative error is this number multiplied with the machine accuracy for this Floating point format (<code>std::numeric_limits<mha_real_t>::epsilon</code>)

Returns

true if the relative difference is below `times_epsilon * std::numeric_limits<mha_real_t>::epsilon`

```
3.9.2.37 operator<() bool operator< (  
    const mha_complex_t & x,  
    const mha_complex_t & y ) [inline]
```

Compares the absolute values of two complex numbers.

3.10 Fast Fourier Transform functions

Collaboration diagram for Fast Fourier Transform functions:

Typedefs

- typedef void * **mha_fft_t**
Handle for an FFT object.

Functions

- **mha_fft_t mha_fft_new** (unsigned int n)
Create a new FFT handle.
- void **mha_fft_free** (**mha_fft_t** h)
Destroy an FFT handle.
- void **mha_fft_wave2spec** (**mha_fft_t** h, const **mha_wave_t** *in, **mha_spec_t** *out)
Transform waveform segment into spectrum.
- void **mha_fft_wave2spec** (**mha_fft_t** h, const **mha_wave_t** *in, **mha_spec_t** *out, bool swaps)
Transform waveform segment into spectrum.
- void **mha_fft_spec2wave** (**mha_fft_t** h, const **mha_spec_t** *in, **mha_wave_t** *out)
Transform spectrum into waveform segment.
- void **mha_fft_spec2wave** (**mha_fft_t** h, const **mha_spec_t** *in, **mha_wave_t** *out, unsigned int offset)
Transform spectrum into waveform segment. out may have fewer number of frames than needed for a complete iFFT. Only as many frames are written into out as fit, starting with offset of the complete iFFT.
- void **mha_fft_forward** (**mha_fft_t** h, **mha_spec_t** *sIn, **mha_spec_t** *sOut)
Complex to complex FFT (forward).
- void **mha_fft_backward** (**mha_fft_t** h, **mha_spec_t** *sIn, **mha_spec_t** *sOut)
Complex to complex FFT (backward).
- void **mha_fft_forward_scale** (**mha_fft_t** h, **mha_spec_t** *sIn, **mha_spec_t** *sOut)
Complex to complex FFT (forward).
- void **mha_fft_backward_scale** (**mha_fft_t** h, **mha_spec_t** *sIn, **mha_spec_t** *sOut)
Complex to complex FFT (backward).

- void `mha_fft_wave2spec_scale` (`mha_fft_t` h, const `mha_wave_t` *in, `mha_spec_t` *out)
Transform waveform segment into spectrum.
- void `mha_fft_spec2wave_scale` (`mha_fft_t` h, const `mha_spec_t` *in, `mha_wave_t` *out)
Transform spectrum into waveform segment.

3.10.1 Detailed Description

3.10.2 Typedef Documentation

3.10.2.1 `mha_fft_t` `typedef void* mha_fft_t`

Handle for an FFT object.

This FFT object is used by the functions `mha_fft_wave2spec` and `mha_fft_spec2wave`. The F↔FT back-end is the FFTW library. The back-end is completely hidden, including external header files or linking external libraries is not required.

3.10.3 Function Documentation

3.10.3.1 `mha_fft_new()` `mha_fft_t` `mha_fft_new` (`unsigned int` n)

Create a new FFT handle.

Parameters

<i>n</i>	FFT length.
----------	-------------

Create a new FFT handle.

Parameters

<i>n</i>	FFT length
----------	------------

Return values

<i>FFT</i>	object
------------	--------

3.10.3.2 mha_fft_free() `void mha_fft_free (mha_fft_t h)`

Destroy an FFT handle.

Parameters

<i>h</i>	Handle to be destroyed.
----------	-------------------------

Destroy an FFT handle.

Parameters

<i>h</i>	FFT object to be removed
----------	--------------------------

3.10.3.3 mha_fft_wave2spec() [1/2] `void mha_fft_wave2spec (mha_fft_t h, const mha_wave_t * in, mha_spec_t * out)`

Tranform waveform segment into spectrum.

Parameters

<i>h</i>	FFT handle.
<i>in</i>	Input waveform segment.
<i>out</i>	Output spectrum.

Tranform waveform segment into spectrum.

Parameters

<i>h</i>	FFT object handle
<i>in</i>	pointer to input waveform signal
<i>out</i>	pointer to output spectrum signal (has to be allocated)

3.10.3.4 mha_fft_wave2spec() [2/2] `void mha_fft_wave2spec (`
`mha_fft_t h,`
`const mha_wave_t * in,`
`mha_spec_t * out,`
`bool swaps)`

Transform waveform segment into spectrum.

Like normal wave2spec, but swaps wave buffer halves before transforming if the swaps parameter is true.

Warning: These openMHA FFTs adopt a nonstandard scaling scheme in which the forward transform scales by 1/N and the backward does not scale. We would recommend using the '_scale' methods instead.

Parameters

<i>h</i>	FFT handle.
<i>in</i>	Input waveform segment.
<i>out</i>	Output spectrum.
<i>swaps</i>	Function swaps the first and second half of the waveform buffer before the FFT transform when this parameter is set to true.

3.10.3.5 mha_fft_spec2wave() [1/2] `void mha_fft_spec2wave (`
`mha_fft_t h,`
`const mha_spec_t * in,`
`mha_wave_t * out)`

Transform spectrum into waveform segment.

Warning: These openMHA FFTs adopt a nonstandard scaling scheme in which the forward transform scales by 1/N and the backward does not scale. We would recommend using the '_scale' methods instead.

Parameters

<i>h</i>	FFT handle.
<i>in</i>	Input spectrum.
<i>out</i>	Output waveform segment.

Tranform spectrum into waveform segment.

Parameters

<i>h</i>	FFT object handle
<i>in</i>	pointer to input spectrum
<i>out</i>	pointer to output waveform signal (has to be allocated)

3.10.3.6 mha_fft_spec2wave() [2/2] `void mha_fft_spec2wave (`
`mha_fft_t h,`
`const mha_spec_t * in,`
`mha_wave_t * out,`
`unsigned int offset)`

Tranform spectrum into waveform segment. *out* may have fewer number of frames than needed for a complete iFFT. Only as many frames are written into *out* as fit, starting with offset *offset* of the complete iFFT.

Warning: These openMHA FFTs adopt a nonstandard scaling scheme in which the forward transform scales by 1/N and the backward does not scale. We would recommend using the '*_scale*' methods instead.

Parameters

<i>h</i>	FFT handle.
<i>in</i>	Input spectrum.
<i>out</i>	Output waveform segment.
<i>offset</i>	Offset into iFFT wave buffer

Tranform spectrum into waveform segment. *out* may have fewer number of frames than needed for a complete iFFT. Only as many frames are written into *out* as fit, starting with offset *offset* of the complete iFFT.

Only part of the iFFT is tranferred into the *out* buffer.

Out may have fewer number of freames than needed for a complete iFFT. Only as many frames are written into *out* as fit, starting with offset *offset* of the complete iFFT.

Parameters

<i>h</i>	FFT object handle
<i>in</i>	pointer to input spectrum
<i>out</i>	pointer to output waveform signal (has to be allocated)
<i>offset</i>	Offset into complete iFFT buffer.

3.10.3.7 mha_fft_forward() `void mha_fft_forward (`
`mha_fft_t h,`
`mha_spec_t * sIn,`
`mha_spec_t * sOut)`

Complex to complex FFT (forward).

sIn and sOut need to have nfft bins (please note that **mha_spec_t** (p. 848) typically has nfft/2+1 bins for half-complex representation).

Warning: These openMHA FFTs adopt a nonstandard scaling scheme in which the forward transform scales by 1/N and the backward does not scale. We would recommend using the '_scale' methods instead.

Parameters

<i>h</i>	FFT handle.
<i>sIn</i>	Input spectrum.
<i>sOut</i>	Output spectrum.

3.10.3.8 mha_fft_backward() `void mha_fft_backward (`
`mha_fft_t h,`
`mha_spec_t * sIn,`
`mha_spec_t * sOut)`

Complex to complex FFT (backward).

sIn and sOut need to have nfft bins (please note that **mha_spec_t** (p. 848) typically has nfft/2+1 bins for half-complex representation).

Warning: These openMHA FFTs adopt a nonstandard scaling scheme in which the forward transform scales by 1/N and the backward does not scale. We would recommend using the '_scale' methods instead.

Parameters

<i>h</i>	FFT handle.
<i>sIn</i>	Input spectrum.
<i>sOut</i>	Output spectrum.

3.10.3.9 mha_fft_forward_scale() `void mha_fft_forward_scale (`
`mha_fft_t h,`
`mha_spec_t * sIn,`
`mha_spec_t * sOut)`

Complex to complex FFT (forward).

sIn and sOut need to have nfft bins (please note that **mha_spec_t** (p. 848) typically has nfft/2+1 bins for half-complex representation).

The `_scale` methods use standard DFT scaling: There is no scaling in the forward transformation, and 1/N scaling for the backward.

Parameters

<i>h</i>	FFT handle.
<i>sIn</i>	Input spectrum.
<i>sOut</i>	Output spectrum.

3.10.3.10 mha_fft_backward_scale() `void mha_fft_backward_scale (`
`mha_fft_t h,`
`mha_spec_t * sIn,`
`mha_spec_t * sOut)`

Complex to complex FFT (backward).

sIn and sOut need to have nfft bins (please note that **mha_spec_t** (p. 848) typically has nfft/2+1 bins for half-complex representation).

The `_scale` methods use standard DFT scaling: There is no scaling in the forward transformation, and 1/N scaling for the backward.

Parameters

<i>h</i>	FFT handle.
<i>sIn</i>	Input spectrum.
<i>sOut</i>	Output spectrum.

3.10.3.11 mha_fft_wave2spec_scale() `void mha_fft_wave2spec_scale (`
 `mha_fft_t h,`
 `const mha_wave_t * in,`
 `mha_spec_t * out)`

Transform waveform segment into spectrum.

The `_scale` methods use standard DFT scaling: There is no scaling in the forward transformation, and 1/N scaling for the backward.

Parameters

<i>h</i>	FFT handle.
<i>in</i>	Input waveform segment.
<i>out</i>	Output spectrum.

3.10.3.12 mha_fft_spec2wave_scale() `void mha_fft_spec2wave_scale (`
 `mha_fft_t h,`
 `const mha_spec_t * in,`
 `mha_wave_t * out)`

Transform spectrum into waveform segment.

The `_scale` methods use standard DFT scaling: There is no scaling in the forward transformation, and 1/N scaling for the backward.

Parameters

<i>h</i>	FFT handle.
<i>in</i>	Input spectrum.
<i>out</i>	Output waveform segment.

4 Namespace Documentation

4.1 ac2lsl Namespace Reference

All types for the **ac2lsl** (p. 78) plugins live in this namespace.

Classes

- class **ac2lsl_t**
*Plugin class of **ac2lsl** (p. 78).*
- class **cfg_t**
*Runtime configuration class of the **ac2lsl** (p. 78) plugin.*
- class **save_var_base_t**
Interface for ac to lsl bridge variable.
- class **save_var_t**
Implementation for all ac to lsl bridges except complex types.
- class **save_var_t<mha_complex_t>**
*Template specialization of the **ac2lsl** (p. 78) bridge to take care of complex numbers.*
- struct **type_info**

Variables

- const std::map< int, **type_info** > **types**

4.1.1 Detailed Description

All types for the **ac2lsl** (p. 78) plugins live in this namespace.

4.1.2 Variable Documentation

4.1.2.1 **types** `const std::map<int, type_info> ac2lsl::types`

4.2 ac2xdf Namespace Reference

Classes

- class **ac2xdf_if_t**
*Plugin interface class of plugin **ac2xdf** (p. 79).*
- class **ac2xdf_rt_t**
- class **acwriter_base_t**
*Base class for all **acwriter_t** (p. 200)'s.*
- class **acwriter_t**
- class **output_file_t**
***output_file_t** (p. 206) represents one XDF output file.*

Functions

- `std::string to_iso8601 (time_t tm)`

Variables

- `const std::unordered_map< std::type_index, std::string > types`

4.2.1 Function Documentation

4.2.1.1 to_iso8601() `std::string ac2xdf::to_iso8601 (time_t tm)`

4.2.2 Variable Documentation

4.2.2.1 types `const std::unordered_map<std::type_index, std::string> ac2xdf::types`

4.3 ac_proc Namespace Reference

Classes

- class **interface_t**

4.4 acmon Namespace Reference

Namespace for displaying ac variables as parser monitors.

Classes

- class **ac_monitor_t**
A class for converting AC variables to Parser monitors of correct type.
- class **acmon_t**

4.4.1 Detailed Description

Namespace for displaying ac variables as parser monitors.

4.5 acsave Namespace Reference

Classes

- class **acsave_t**
- class **cfg_t**
- struct **mat4head_t**
- class **save_var_t**

4.6 addsndfile Namespace Reference

Classes

- class **addsndfile_if_t**
- class **level_adapt_t**
- class **resampled_soundfile_t**
Reads sound from file and resamples it if necessary and wanted.
- class **sndfile_t**
- class **waveform_proxy_t**
*Class helps to specify which instance of MHASignal_waveform_t parent instance is meant in **resampled_soundfile_t** (p. 279).*

Typedefs

- typedef **MHAPLugin::config_t**< **level_adapt_t** > **level_adaptor**
- typedef **MHAPLugin::plugin_t**< **sndfile_t** > **wave_reader**

Enumerations

- enum **addsndfile_resampling_mode_t** { DONT_RESAMPLE_PERMISSIVE, DONT_RESAMPLE_STRICT, DO_RESAMPLE }
Specifies the resampling mode in `resampled_soundfile_t`.

Functions

- static unsigned **resampled_num_frames** (unsigned num_source_frames, float source_rate, float target_rate, **addsndfile_resampling_mode_t** resampling_mode)

4.6.1 Typedef Documentation

4.6.1.1 level_adaptor typedef `MHAPugin::config_t< level_adapt_t>` `addsndfile::level_adaptor`

4.6.1.2 wave_reader typedef `MHAPugin::plugin_t< sndfile_t>` `addsndfile::wave_reader`

4.6.2 Enumeration Type Documentation

4.6.2.1 addsndfile_resampling_mode_t enum `addsndfile::addsndfile_resampling_mode_t`

Specifies the resampling mode in `resampled_soundfile_t` (p. 279).

Enumerator

DONT_RESAMPLE_PERMISSIVE	
DONT_RESAMPLE_STRICT	Do not resample, if the sample rate of the MHA differs from the sample rate of the sound file, raise an error.
DO_RESAMPLE	Resample.

4.6.3 Function Documentation

4.6.3.1 resampled_num_frames() static unsigned addsndfile::resampled_num_frames
(
 unsigned num_source_frames,
 float source_rate,
 float target_rate,
 addsndfile_resampling_mode_t resampling_mode) [static]

4.7 ADM Namespace Reference

Classes

- class **ADM**
 Adaptive differential microphone, working for speech frequency range.
- class **Delay**
 A delay-line class.
- class **Linearphase_FIR**
 An efficient linear-phase fir filter implementation.

Functions

- static double **subsampldelay_coeff** (double samples, double f_design, double fs=1.0)
 compute IIR coefficient for subsample delay

Variables

- const double **PI** = 3.14159265358979312
- const double **C** = 340
- const double **DELAY_FREQ** = 2000
- const double **START_BETA** = 0.5

4.7.1 Function Documentation

4.7.1.1 subsampldelay_coeff() static double ADM::subsampldelay_coeff (
 double samples,
 double f_design,
 double fs = 1.0) [static]

compute IIR coefficient for subsample delay

Parameters

<i>samples</i>	Constraint: $0.0 \leq \text{samples} < 1.0$; Amount of sub-sample delay
<i>f_design</i>	design frequency (subsample delay is accurate for this frequency)
<i>fs</i>	sampling rate

Returns

IIR coefficient for subsample delay

4.7.2 Variable Documentation

4.7.2.1 PI `const double ADM::PI = 3.14159265358979312`

4.7.2.2 C `const double ADM::C = 340`

4.7.2.3 DELAY_FREQ `const double ADM::DELAY_FREQ = 2000`

4.7.2.4 START_BETA `const double ADM::START_BETA = 0.5`

4.8 audiometerbackend Namespace Reference

Classes

- class **audiometer_if_t**
- class **level_adapt_t**
- class **Inn3rdoct_t**
- class **signal_gen_t**
- class **sine_t**

Typedefs

- typedef **MHAPLugin::config_t**< **level_adapt_t** > **level_adaptor**
- typedef **MHAPLugin::plugin_t**< **signal_gen_t** > **generator**

Functions

- static unsigned int **gcd** (unsigned int a, unsigned int b)
- **MHASignal::waveform_t return_sig** (unsigned int sigtype, unsigned int fs, unsigned int f)

4.8.1 Typedef Documentation

4.8.1.1 level_adaptor typedef **MHAPLugin::config_t**< **level_adapt_t**> **audiometerbackend**↔
::level_adaptor

4.8.1.2 generator typedef **MHAPLugin::plugin_t**< **signal_gen_t**> **audiometerbackend**↔
::generator

4.8.2 Function Documentation

4.8.2.1 gcd() static unsigned int **audiometerbackend::gcd** (
 unsigned int *a*,
 unsigned int *b*) [inline], [static]

4.8.2.2 return_sig() **MHASignal::waveform_t** **audiometerbackend::return_sig** (
 unsigned int *sigtype*,
 unsigned int *fs*,
 unsigned int *f*)

4.9 AuditoryProfile Namespace Reference

Namespace for classes and functions around the auditory profile (e.g., audiogram handling)

Classes

- class **fmap_t**
A class to store frequency dependent data (e.g., HTL and UCL).
- class **parser_t**
Class to make the auditory profile accessible through the parser interface.
- class **profile_t**
The Auditory Profile class.

4.9.1 Detailed Description

Namespace for classes and functions around the auditory profile (e.g., audiogram handling)

The auditory profile as defined by HearCom or BMBF Modellbasierte Hoergeraete is stored in the class **AuditoryProfile::profile_t** (p. 346). Until a complete definition is available, only the currently needed elements are implemented.

4.10 coherence Namespace Reference

Classes

- class **cohflt_if_t**
- class **cohflt_t**
- class **vars_t**

Functions

- void **getcipd** (**mha_complex_t** &c, **mha_real_t** &a, const **mha_complex_t** &xl, const **mha_complex_t** &xr)

4.10.1 Function Documentation

4.10.1.1 getcipd() `void coherence::getcipd (`
 `mha_complex_t & c,`
 `mha_real_t & a,`
 `const mha_complex_t & xl,`
 `const mha_complex_t & xr) [inline]`

4.11 cpuload Namespace Reference

Classes

- class `cpuload_cfg_t`
- class `cpuload_if_t`

4.12 dbasync_native Namespace Reference

Classes

- class `db_if_t`
- class `dbasync_t`
- class `delay_check_t`

Enumerations

- enum { `INVALID_THREAD_PRIORITY = 999999999` }

Functions

- static void * `thread_start` (void *instance)
- static unsigned `gcd` (unsigned a, unsigned b)

4.12.1 Enumeration Type Documentation

4.12.1.1 anonymous enum `anonymous enum`

Enumerator

INVALID_THREAD_PRIORITY

4.12.2 Function Documentation

4.12.2.1 thread_start() `static void* dbasync_native::thread_start (void * instance) [static]`

4.12.2.2 gcd() `static unsigned dbasync_native::gcd (unsigned a, unsigned b) [inline], [static]`

4.13 dc Namespace Reference

Namespace containing all classes of the `dc` plugin which performs dynamic compression.

Classes

- class `dc_if_t`
Plugin interface class of the dynamic compression plugin `dc`.
- class `dc_t`
Runtime configuration class of dynamic compression plugin `dc`.
- class `dc_vars_t`
Collection of configuration variables of the `dc` plugin.
- class `dc_vars_validator_t`
Consistency checker.

4.13.1 Detailed Description

Namespace containing all classes of the `dc` plugin which performs dynamic compression.

4.14 dc_simple Namespace Reference

Classes

- class **dc_if_t**
*interface class for **dc_simple** (p. 88)*
- class **dc_t**
*Runtime config class for **dc_simple** (p. 88) plugin.*
- class **dc_vars_t**
*class for **dc_simple** (p. 88) plugin which registers variables to **MHAParser** (p. 123).*
- class **dc_vars_validator_t**
Helper class to check sizes of configuration variable vectors.
- class **level_smoother_t**
Class which computes smoothed input levels on individual bands, using an attack and release filter, which are a first order low pass filter and a maximum tracker filter, respectively.

Typedefs

- typedef **MHAPPlugin::plugin_t< dc_t > DC**
Define alternate name for runtime_cfg_t.
- typedef **MHAPPlugin::config_t< level_smoother_t > LEVEL**
Define alternate name for config_t.

Functions

- void **test_fail** (const std::vector< float > &v, unsigned int s, const std::string &name)
Checks size of vector.
- std::vector< float > **force_resize** (const std::vector< float > &v, unsigned int s, const std::string &name)
Creates a copy of vector v with s elements, provided that v has either s elements or 1 elements.
- **mha_real_t not_zero** (mha_real_t x, const std::string &comment)
Helper function to throw an error if x is 0.

4.14.1 Typedef Documentation

4.14.1.1 DC typedef **MHAPPlugin::plugin_t< dc_t > dc_simple::DC**

Define alternate name for runtime_cfg_t.

4.14.1.2 LEVEL `typedef MHAPugin::config_t< level_smoother_t> dc_simple::LEVEL`

Define alternate name for `config_t`.

4.14.2 Function Documentation

4.14.2.1 test_fail() `void dc_simple::test_fail (`
`const std::vector< float > & v,`
`unsigned int s,`
`const std::string & name)`

Checks size of vector.

Parameters

in	<i>v</i>	The vector to check the size of.
in	<i>s</i>	Expected size of vector <i>v</i> .
in	<i>name</i>	Name of vector to include in error message when size does not match.

Exceptions

<i>MHA_Error</i> (p. 818)	if the size of <i>v</i> is neither <i>s</i> nor 1.
----------------------------------	--

4.14.2.2 force_resize() `std::vector< float > dc_simple::force_resize (`
`const std::vector< float > & v,`
`unsigned int s,`
`const std::string & name)`

Creates a copy of vector *v* with *s* elements, provided that *v* has either *s* elements or 1 elements.

Parameters

in	<i>v</i>	The vector to copy elements from.
in	<i>s</i>	The desired number of elements in the output vector.
in	<i>name</i>	Name of vector to include in error message when input size does not match expectation.

Returns

A copy of v with s elements.

Exceptions

<i>MHA_Error</i> (p. 818)	if size of v is neither s nor 1.
----------------------------------	--------------------------------------

```
4.14.2.3 not_zero() mha_real_t dc_simple::not_zero (
    mha_real_t x,
    const std::string & comment )
```

Helper function to throw an error if x is 0.

Parameters

in	x	The value to check.
in	<i>comment</i>	Optional explanation for error message.

Exceptions

<i>MHA_Error</i> (p. 818)	if $x == 0$.
----------------------------------	---------------

4.15 delay Namespace Reference**Classes**

- class **interface_t**

4.16 delaysum Namespace Reference

This namespace contains the delaysum plugin.

Classes

- class **delaysum_wave_if_t**
Interface class for the delaysum plugin.
- class **delaysum_wave_t**
Runtime configuration of the delaysum_wave plugin.

4.16.1 Detailed Description

This namespace contains the delaysum plugin.

4.17 delaysum_spec Namespace Reference

Classes

- class **delaysum_spec_if_t**
- class **delaysum_t**

4.18 double2acvar Namespace Reference

Classes

- class **double2acvar_t**
*Plugin interface class for **double2acvar** (p. 91).*

4.19 DynComp Namespace Reference

dynamic compression related classes and functions

Classes

- class **dc_afterburn_rt_t**
Real-time class for after burn effect.
- class **dc_afterburn_t**
Afterburn class, to be defined as a member of compressors.
- class **dc_afterburn_vars_t**
*Variables for **dc_afterburn_t** (p. 473) class.*
- class **gaintable_t**
Gain table class.

Functions

- **mha_real_t interp1** (const std::vector< **mha_real_t** > &vX, const std::vector< **mha_real_t** > &vY, **mha_real_t** X)
One-dimensional linear interpolation.
- **mha_real_t interp2** (const std::vector< **mha_real_t** > &vX, const std::vector< **mha_real_t** > &vY, const std::vector< std::vector< **mha_real_t** > > &mZ, **mha_real_t** X, **mha_real_t** Y)
Linear interpolation in a two-dimensional field.

4.19.1 Detailed Description

dynamic compression related classes and functions

4.19.2 Function Documentation

4.19.2.1 interp1() `mha_real_t DynComp::interp1 (`
`const std::vector< mha_real_t > & vX,`
`const std::vector< mha_real_t > & vY,`
`mha_real_t X)`

One-dimensional linear interpolation.

Parameters

<code>vX</code>	Vector with input samples.
<code>vY</code>	Vector with values at input samples.
<code>X</code>	Input value to be interpolated.

Return values

<i>Interpolated</i>	value $Y(X)$ at position X .
---------------------	--------------------------------

4.19.2.2 interp2() `mha_real_t DynComp::interp2 (`
`const std::vector< mha_real_t > & vX,`
`const std::vector< mha_real_t > & vY,`
`const std::vector< std::vector< mha_real_t > > & mZ,`
`mha_real_t X,`
`mha_real_t Y)`

Linear interpolation in a two-dimensional field.

Parameters

<code>vX</code>	Vector with input samples, first dimension.
<code>vY</code>	Vector with input samples, second dimension.
<code>mZ</code>	Field with values at input samples.
<code>X</code>	First dimension of input value to be interpolated.
<code>Y</code>	Second dimension of input value to be interpolated.

Return values

<i>Interpolated</i>	value $Z(X,Y)$ at position X,Y .
---------------------	------------------------------------

4.20 equalize Namespace Reference

Classes

- class `cfg_t`
- class `freqgains_t`

4.21 fader_wave Namespace Reference

Classes

- class `fader_wave_if_t`
- class `level_adapt_t`

Typedefs

- typedef `MHAPLugin::plugin_t< level_adapt_t > level_adaptor`

4.21.1 Typedef Documentation

4.21.1.1 level_adaptor typedef `MHAPLugin::plugin_t< level_adapt_t > fader_wave↔
::level_adaptor`

4.22 fftbpow Namespace Reference

Namespace for the fftbpow plugin.

Classes

- class **fffbpow_interface_t**
Interface class for fffbpow plugin.
- class **fffbpow_t**
Run time configuration for the fffbpow plugin.

4.22.1 Detailed Description

Namespace for the fffbpow plugin.

4.23 fffilter Namespace Reference

Classes

- class **fffilter_t**
- class **interface_t**

Functions

- unsigned int **irs_length** (const **MHAParser::mfloat_t** &irs)
- unsigned int **irs_validator** (const **MHAParser::mfloat_t** &irs, const unsigned int &**channels**, const unsigned int &fragsize, const unsigned int &ffflen)

4.23.1 Function Documentation

4.23.1.1 **irs_length()** `unsigned int fffilter::irs_length (const MHAParser::mfloat_t & irs)`

Return the length of the longest vector in irs.

Parameters

<i>irs</i>	"Matrix" of floats parser variable
------------	------------------------------------

Returns

length of the longest vector in *irs*, or 1 if all vectors are empty

```
4.23.1.2 irs_validator() unsigned int fftfilter::irs_validator (
    const MHAParser::mfloat_t & irs,
    const unsigned int & channels,
    const unsigned int & fragsize,
    const unsigned int & fftlen )
```

Validity checks. Throws Error if parameters are invalid: Number of channels must be > 0, *fftl*en must be >= *fragsize*. The number of rows in *irs* has to match the number of channels, or has to be exactly 1. None of the row vectors may be empty. The longest supported impulse response is (*fftl*en - *fragsize* + 1). Impulse responses longer than (*fftl*en - *fragsize* + 1) would cause temporal aliasing.

Parameters

<i>irs</i>	The matrix containing the impulse responses (one response per channel, or the same response for every channels) as set by the parser.
<i>channels</i>	The number of prepared audio channels for this MHA plugin.
<i>fragsize</i>	The block size (samples per channel) for waveform audio data
<i>fftl</i> en	FFT length used for filtering.

Returns

the length of the longest impulse response vector in *irs*.

4.24 fftfilterbank Namespace Reference**Classes**

- class **fftfb_interface_t**
- class **fftfb_plug_t**

4.25 fshift Namespace Reference

All types for the fshift plugin live in this namespace.

Classes

- class **fshift_config_t**
fshift runtime config class
- class **fshift_t**
fshift plugin interface class

Functions

- int **fft_find_bin** (**mha_real_t** frequency, unsigned fftlen, **mha_real_t** srate)
Finds bin number of FFT bin nearest to the given frequency.

4.25.1 Detailed Description

All types for the fshift plugin live in this namespace.

4.25.2 Function Documentation

4.25.2.1 fft_find_bin() `int fshift::fft_find_bin (`
`mha_real_t frequency,`
`unsigned fftlen,`
`mha_real_t srate)`

Finds bin number of FFT bin nearest to the given frequency.

Parameters

<i>frequency</i>	The frequency for which to look. Has to be in range [-srate/2,+srate/2]
<i>fftlen</i>	Length of the FFT.
<i>srate</i>	Sampling rate of the waveform from which the FFT originates.

Returns

Bin number of the FFT bin corresponding to frequency

4.26 fshift_hilbert Namespace Reference

All types for the hilbert frequency shifter live in this namespace.

Classes

- class `frequency_translator_t`
- class `hilbert_shifter_t`

4.26.1 Detailed Description

All types for the hilbert frequency shifter live in this namespace.

4.27 gain Namespace Reference

Classes

- class `gain_if_t`
- class `scaler_t`

4.28 gsc_adaptive_stage Namespace Reference

Classes

- class `gsc_adaptive_stage`
- class `gsc_adaptive_stage_if`
Plugin interface class.

Variables

- constexpr `mha_real_t DELT =1e-12`
Small constant to ensure no division by zero occurs.

4.28.1 Variable Documentation

4.28.1.1 `DELT` constexpr `mha_real_t gsc_adaptive_stage::DELT =1e-12` [constexpr]

Small constant to ensure no division by zero occurs.

4.29 `gtfb_analyzer` Namespace Reference

Classes

- struct `gtfb_analyzer_cfg_t`
Configuration for Gammatone Filterbank Analyzer.
- class `gtfb_analyzer_t`
Gammatone Filterbank Analyzer Plugin.

4.30 `level_matching` Namespace Reference

Classes

- class `channel_pair`
- class `level_matching_config_t`
- class `level_matching_t`

4.31 `Isl2ac` Namespace Reference

Classes

- class `cfg_t`
Runtime configuration class of the `Isl2ac` (p. 98) plugin.
- class `Isl2ac_t`
Plugin class of `Isl2ac` (p. 98).
- class `save_var_base_t`
- class `save_var_t`
LSL to AC bridge variable.
- class `save_var_t< std::string >`
Specialication for marker streams.

Enumerations

- enum `overrun_behavior` { `overrun_behavior::Discard =0`, `overrun_behavior::↔Ignore` }

4.31.1 Enumeration Type Documentation

4.31.1.1 `overrun_behavior` enum `Isl2ac::overrun_behavior` [strong]

Enumerator

Discard	
Ignore	

4.32 matlab_wrapper Namespace Reference

Namespace where all classes of the matlab wrapper plugin live.

Classes

- class **callback**
Utility class connecting a user_config_t instance to its corresponding configuration parser.
- class **matlab_wrapper_rt_cfg_t**
Thin wrapper around the emxArray containing the user defined configuration variables.
- class **matlab_wrapper_t**
Matlab wrapper plugin interface class.
- struct **types**
- struct **types**< **MHA_SPECTRUM** >
- struct **types**< **MHA_WAVEFORM** >

4.32.1 Detailed Description

Namespace where all classes of the matlab wrapper plugin live.

4.33 matrixmixer Namespace Reference

Classes

- class **cfg_t**
- class **matmix_t**

4.34 mconv Namespace Reference

Classes

- class **MConv**

4.35 MHA_AC Namespace Reference

Classes

- class **ac2matrix_helper_t**
- class **ac2matrix_t**
Copy AC variable to a matrix.
- class **acspace2matrix_t**
Copy all or a subset of all numeric AC variables into an array of matrixes.
- class **algo_comm_class_t**
AC variable space implementation.
- class **algo_comm_t**
Algorithm communication variable space interface.
- class **comm_var_map_t**
Storage class for the AC variable space.
- struct **comm_var_t**
Algorithm communication variable structure.
- class **scalar_t**
- class **spectrum_t**
- class **stat_t**
- class **waveform_t**

Typedefs

- typedef **scalar_t**< int, **MHA_AC_INT** > **int_t**
Convenience class for inserting an integer variable into the AC space.
- typedef **scalar_t**< float, **MHA_AC_FLOAT** > **float_t**
Convenience class for inserting a single-precision floating-point variable into the AC space.
- typedef **scalar_t**< double, **MHA_AC_DOUBLE** > **double_t**
Convenience class for inserting a double-precision floating-point variable into the AC space.

Functions

- **mha_spec_t get_var_spectrum** (**algo_comm_t** &ac, const std::string &name)
Convert an AC variable into a spectrum.
- **mha_wave_t get_var_waveform** (**algo_comm_t** &ac, const std::string &name)
Convert an AC variable into a waveform.
- int **get_var_int** (**algo_comm_t** &ac, const std::string &name)
Return value of an integer scalar AC variable.
- float **get_var_float** (**algo_comm_t** &ac, const std::string &name)
Return value of an floating point scalar AC variable.
- std::vector< float > **get_var_vfloat** (**algo_comm_t** &ac, const std::string &name)
Return value of an floating point vector AC variable as standard vector of floats.

4.35.1 Typedef Documentation

4.35.1.1 int_t typedef scalar_t<int, MHA_AC_INT> MHA_AC::int_t

Convenience class for inserting an integer variable into the AC space.

4.35.1.2 float_t typedef scalar_t<float, MHA_AC_FLOAT> MHA_AC::float_t

Convenience class for inserting a single-precision floating-point variable into the AC space.

4.35.1.3 double_t typedef scalar_t<double, MHA_AC_DOUBLE> MHA_AC::double_t

Convenience class for inserting a double-precision floating-point variable into the AC space.

4.36 mha_error_helpers Namespace Reference

Functions

- unsigned **digits** (unsigned n)
Compute number of decimal digits required to represent an unsigned integer.
- unsigned **snprintf_required_length** (const char *formatstring,...)
snprintf_required_length Compute the number of bytes (excluding the terminating nul) required to store the result of an snprintf.

4.36.1 Function Documentation

4.36.1.1 digits() unsigned mha_error_helpers::digits (
 unsigned n)

Compute number of decimal digits required to represent an unsigned integer.

Parameters

<i>n</i>	The unsigned integer that we want to know the number of required decimal digits for. return The number of decimal digits in <i>n</i> .
----------	--

4.36.1.2 `snprintf_required_length()` `unsigned mha_error_helpers::snprintf_required_length (`
`const char * formatstring,`
`...)`

`snprintf_required_length` Compute the number of bytes (excluding the terminating nul) required to store the result of an `snprintf`.

Parameters

<i>formatstring</i>	The format string with standard printf <i>formatstring</i>
---------------------	--

Returns

the number of bytes required by `printf` without the terminating nul

4.37 MHA_TCP Namespace Reference

A Namespace for TCP helper classes.

Classes

- class **Async_Notify**
Portable Multiplexable cross-thread notification.
- class **Client**
A portable class for a tcp client connections.
- class **Connection**
Connection (p. 857) *handles Communication between client and server, is used on both sides.*
- class **Event_Watcher**
OS-independent event watcher, uses select on Unix and WaitForMultipleObjects on Windows.
- struct **OS_EVENT_TYPE**
- class **Server**
- class **sock_init_t**
- class **Sockaccept_Event**

- class **Socketread_Event**
Watch socket for incoming data.
- class **Socketwrite_Event**
- class **Thread**
A very simple class for portable threads.
- class **Timeout_Event**
- class **Timeout_Watcher**
OS-independent event watcher with internal fixed-end-time timeout.
- class **Wakeup_Event**
A base class for asynchronous wakeup events.

Typedefs

- typedef int **SOCKET**

Functions

- std::string **STRERROR** (int err)
Portable conversion from error number to error string.
- std::string **HSTRERROR** (int err)
Portable conversion from hostname error number to error string.
- int **N_ERRNO** ()
Portable access to last network error number.
- int **H_ERRNO** ()
Portable access to last hostname error number.
- int **G_ERRNO** ()
Portable access to last non-network error number.
- double **dtime** ()
Time access function for system's high resolution time, retrieve current time as double.
- double **dtime** (const struct timeval &tv)
Time access function for unix' high resolution time, converts struct timeval to double.
- struct timeval **stime** (double d)
Time access function for unix' high resolution time, converts time from double to struct timeval.

Variables

- class **MHA_TCP::sock_init_t** **sock_initializer**

4.37.1 Detailed Description

A Namespace for TCP helper classes.

4.37.2 Typedef Documentation

4.37.2.1 SOCKET `typedef int MHA_TCP::SOCKET`

4.37.3 Function Documentation

4.37.3.1 STRERROR() `std::string MHA_TCP::STRERROR (int err)`

Portable conversion from error number to error string.

4.37.3.2 HSTRERROR() `std::string MHA_TCP::HSTRERROR (int err)`

Portable conversion from hostname error number to error string.

4.37.3.3 N_ERRNO() `int MHA_TCP::N_ERRNO ()`

Portable access to last network error number.

4.37.3.4 H_ERRNO() `int MHA_TCP::H_ERRNO ()`

Portable access to last hostname error number.

4.37.3.5 G_ERRNO() `int MHA_TCP::G_ERRNO ()`

Portable access to last non-network error number.

4.37.3.6 dtime() [1/2] `double MHA_TCP::dtime ()`

Time access function for system's high resolution time, retrieve current time as double.

4.37.3.7 dtime() [2/2] `double MHA_TCP::dtime (const struct timeval & tv)`

Time access function for unix' high resolution time, converts struct timeval to double.

4.37.3.8 stime() `struct timeval MHA_TCP::stime (double d)`

Time access function for unix' high resolution time, converts time from double to struct timeval.

4.37.4 Variable Documentation**4.37.4.1 sock_initializer** `class MHA_TCP::sock_init_t MHA_TCP::sock_initializer`**4.38 mha_tcp Namespace Reference**

namespace for network communication classes of MHA

Classes

- class **buffered_socket_t**

An asio TCP socket with an associated streambuf buffer for receiving lines of text, as well as string buffers for sending responses.

- class **server_t**

Class for accepting TCP connections from clients.

4.38.1 Detailed Description

namespace for network communication classes of MHA

4.39 mhachain Namespace Reference

Classes

- class **chain_base_t**
- class **mhachain_t**
- class **plugs_t**

4.40 MHAEvents Namespace Reference

Collection of event handling classes.

Classes

- class **connector_base_t**
- class **connector_t**
- class **emitter_t**
Class for emitting openMHA events.
- class **patchbay_t**
Patchbay which connects any event emitter with any member function of the parameter class.

4.40.1 Detailed Description

Collection of event handling classes.

4.41 MHAFilter Namespace Reference

Namespace for IIR and FIR filter classes.

Classes

- class **adapt_filter_param_t**
- class **adapt_filter_state_t**
- class **adapt_filter_t**
Adaptive filter.
- class **blockprocessing_polyphase_resampling_t**
A class that does polyphase resampling and takes into account block processing.
- class **complex_bandpass_t**
Complex bandpass filter.
- class **diff_t**
Differentiator class (non-normalized)
- class **fftfilter_t**
FFT based FIR filter implementation.
- class **fftfilterbank_t**
FFT based FIR filterbank implementation.
- class **filter_t**
Generic IIR filter class.
- class **gamma_filt_t**
Class for gammatone filter.
- class **iir_filter_state_t**
- class **iir_filter_t**
IIR filter class wrapper for integration into parser structure.
- class **iir_ord1_real_t**
First order recursive filter.
- class **o1_ar_filter_t**
First order attack-release lowpass filter.
- class **o1flt_lowpass_t**
First order low pass filter.
- class **o1flt_maxtrack_t**
First order maximum tracker.
- class **o1flt_mintrack_t**
First order minimum tracker.
- class **partitioned_convolution_t**
A filter class for partitioned convolution.
- class **polyphase_resampling_t**
A class that performs polyphase resampling.
- class **resampling_filter_t**
Hann shaped low pass filter for resampling.
- class **smoothspec_t**
Smooth spectral gains, create a windowed impulse response.
- class **thirdoctave_analyzer_t**
- struct **transfer_function_t**
a structure containing a source channel number, a target channel number, and an impulse response.
- struct **transfer_matrix_t**
A sparse matrix of transfer function partitionss.

Functions

- `template<typename T , typename std::enable_if< std::is_floating_point< T >::value, T >::type * = nullptr> void make_friendly_number (T &x)`
- `void o1_lp_coeffs (const mha_real_t tau, const mha_real_t fs, mha_real_t &c1, mha_real_t &c2)`
Set first order filter coefficients from time constant and sampling rate.
- `void butter_stop_ord1 (double *A, double *B, double f1, double f2, double fs)`
Setup a first order butterworth band stop filter.
- `std::vector< float > fir_lp (float f_pass_, float f_stop_, float fs_, unsigned order_)`
Setup a nth order fir low pass filter.
- `MHASignal::waveform_t * spec2fir (const mha_spec_t *spec, const unsigned int fftlen, const MHAWindow::base_t &>window, const bool minphase)`
Create a windowed impulse response/FIR filter coefficients from a spectrum.
- `unsigned gcd (unsigned a, unsigned b)`
greatest common divisor
- `double sinc (double x)`
sin(x)/x function, coping with x=0.
- `std::pair< unsigned, unsigned > resampling_factors (float source_sampling_rate, float target_sampling_rate, float factor=1.0f)`
Computes rational resampling factor from two sampling rates.

4.41.1 Detailed Description

Namespace for IIR and FIR filter classes.

4.41.2 Function Documentation

4.41.2.1 make_friendly_number() `template<typename T , typename std::enable_if< std::is_floating_point< T >::value, T >::type * = nullptr> void MHAFilter::make_friendly_number (T & x) [inline]`

4.41.2.2 o1_lp_coeffs() `void MHAFilter::o1_lp_coeffs (const mha_real_t tau, const mha_real_t fs, mha_real_t & c1, mha_real_t & c2)`

Set first order filter coefficients from time constant and sampling rate.

Parameters

<i>tau</i>	Time constant
<i>fs</i>	Sampling rate

Return values

<i>c1</i>	Recursive filter coefficient
<i>c2</i>	Non-recursive filter coefficient

4.41.2.3 butter_stop_ord1() `void MHAFilter::butter_stop_ord1 (`
`double * A,`
`double * B,`
`double f1,`
`double f2,`
`double fs)`

Setup a first order butterworth band stop filter.

This function calculates the filter coefficients of a first order butterworth band stop filter.

Return values

<i>A</i>	recursive filter coefficients
<i>B</i>	non recursive filter coefficients

Parameters

<i>f1</i>	lower frequency
<i>f2</i>	upper frequency
<i>fs</i>	sample frequency

4.41.2.4 fir_lp() `std::vector< float > MHAFilter::fir_lp (`
`float f_pass_,`
`float f_stop_,`
`float fs_,`
`unsigned order_)`

Setup a nth order fir low pass filter.

This function calculates the filter coefficients of a nth order fir low pass filter filter. Frequency arguments above the nyquist frequency are accepted but the spectral response is truncated at the nyquist frequency

Returns

vector containing filter coefficients

Precondition

f_pass_ must be smaller or equal to f_stop_.

Parameters

<i>f_pass_</i>	Upper passband frequency
<i>f_stop_</i>	Lower stopband frequency
<i>fs_</i>	sample frequency

4.41.2.5 spec2fir() `MHASignal::waveform_t * MHAFilter::spec2fir (`
`const mha_spec_t * spec,`
`const unsigned int fftlen,`
`const MHAWindow::base_t & window,`
`const bool minphase)`

Create a windowed impulse response/FIR filter coefficients from a spectrum.

Parameters

<i>spec</i>	Input spectrum
<i>fftlen</i>	FFT length of spectrum
<i>window</i>	Window shape (with length, e.g. initialized with MHAWindow::hanning(54)).
<i>minphase</i>	Flag, true if original phase should be discarded and replaced by a minimal phase function.

4.41.2.6 gcd() `unsigned MHAFilter::gcd (`
`unsigned a,`
`unsigned b) [inline]`

greatest common divisor

4.41.2.7 sinc() `double MHAFilter::sinc (`
`double x)`

$\sin(x)/x$ function, coping with $x=0$.

This is the historical sinc function, not the normalized sinc function.

4.41.2.8 resampling_factors() `std::pair< unsigned, unsigned > MHAFilter::resampling↔`
`_factors (`
`float source_sampling_rate,`
`float target_sampling_rate,`
`float factor = 1.0f)`

Computes rational resampling factor from two sampling rates.

The function will fail if either `sampling_rate * factor` is not an integer

Parameters

<i>source_sampling_rate</i>	The original sampling rate
<i>target_sampling_rate</i>	The desired sampling rate
<i>factor</i>	A helper factor to use for non-integer sampling rates

Returns

a pair that contains first the upsampling factor and second the downsampling factor required for the specified resampling.

Exceptions

<i>MHA_Error</i> (p. 818)	if no rational resampling factor can be found.
----------------------------------	--

4.42 MHAIOJack Namespace Reference

JACK IO.

Classes

- class `io_jack_t`
Main class for JACK IO.

4.42.1 Detailed Description

JACK IO.

4.43 MHAIOJackdb Namespace Reference

Classes

- class `io_jack_t`
Main class for JACK IO.

4.44 MHAIOPortAudio Namespace Reference

Classes

- class `device_info_t`
- class `io_portaudio_t`
Main class for Portaudio sound IO.
- class `stream_info_t`

Functions

- static `std::string parserFriendlyName` (const `std::string` &in)

4.44.1 Function Documentation

4.44.1.1 `parserFriendlyName()` `static std::string MHAIOPortAudio::parserFriendlyName (const std::string & in) [static]`

4.45 mhaioutils Namespace Reference

Functions

- `template<typename T >`
`T to_int_clamped (float val)`

4.45.1 Function Documentation

4.45.1.1 to_int_clamped() `template<typename T >`
`T mhaioutils::to_int_clamped (`
`float val)`

4.46 MHAJack Namespace Reference

Classes and functions for openMHA and JACK interaction.

Classes

- class **client_avg_t**
Generic JACK client for averaging a system response across time.
- class **client_noncont_t**
Generic client for synchronous playback and recording of waveform fragments.
- class **client_t**
Generic asynchronous JACK client.
- class **port_t**
Class for one channel/port.

Functions

- `void io (mha_wave_t *s_out, mha_wave_t *s_in, const std::string &name, const std::vector< std::string > &p_out, const std::vector< std::string > &p_in, float *srate=NULL, unsigned int *fragsize=NULL, bool use_jack_transport=false)`
Functional form of generic client for synchronous playback and recording of waveform fragments.
- `std::vector< unsigned int > get_port_capture_latency (const std::vector< std::string > &ports)`
Return the JACK port latency of ports.
- `std::vector< int > get_port_capture_latency_int (const std::vector< std::string > &ports)`
Return the JACK port latency of ports.
- `std::vector< unsigned int > get_port_playback_latency (const std::vector< std::string > &ports)`
Return the JACK port latency of ports.
- `std::vector< int > get_port_playback_latency_int (const std::vector< std::string > &ports)`

4.46.1 Detailed Description

Classes and functions for openMHA and JACK interaction.

4.46.2 Function Documentation

4.46.2.1 io() `void MHAJack::io (`
 `mha_wave_t * s_out,`
 `mha_wave_t * s_in,`
 `const std::string & name,`
 `const std::vector< std::string > & p_out,`
 `const std::vector< std::string > & p_in,`
 `float * srate = NULL,`
 `unsigned int * fragsize = NULL,`
 `bool use_jack_transport = false)`

Functional form of generic client for synchronous playback and recording of waveform fragments.

4.46.2.2 get_port_capture_latency() `std::vector< unsigned int > MHAJack::get_↔`
`port_capture_latency (`
 `const std::vector< std::string > & ports)`

Return the JACK port latency of ports.

Parameters

<i>ports</i>	Ports to be tested
--------------	--------------------

Returns

Latency vector (one entry for each port)

4.46.2.3 get_port_capture_latency_int() `std::vector< int > MHAJack::get_port_↔`
`capture_latency_int (`
 `const std::vector< std::string > & ports)`

Return the JACK port latency of ports.

Parameters

<i>ports</i>	Ports to be tested
--------------	--------------------

Returns

Latency vector (one entry for each port)

```
4.46.2.4 get_port_playback_latency() std::vector< unsigned int > MHAJack::get_↔
port_playback_latency (
    const std::vector< std::string > & ports )
```

Return the JACK port latency of ports.

Parameters

<i>ports</i>	Ports to be tested
--------------	--------------------

Returns

Latency vector (one entry for each port)

```
4.46.2.5 get_port_playback_latency_int() std::vector< int > MHAJack::get_↔
port_playback_latency_int (
    const std::vector< std::string > & ports )
```

4.47 MHAMultiSrc Namespace Reference

Collection of classes for selecting audio chunks from multiple sources.

Classes

- class **base_t**
Base class for source selection.
- class **channel_t**
- class **channels_t**
- class **spectrum_t**
- class **waveform_t**

4.47.1 Detailed Description

Collection of classes for selecting audio chunks from multiple sources.

4.48 MHAOvIFilter Namespace Reference

Namespace for overlapping FFT based filter bank classes and functions.

Namespaces

- **barkscale**
- **FreqScaleFun**
Transform functions from linear scale in Hz to new frequency scales.
- **ShapeFun**
Shape functions for overlapping filters.

Classes

- class **band_descriptor_t**
- class **fftfb_ac_info_t**
- class **fftfb_t**
FFT based overlapping filter bank.
- class **fftfb_vars_t**
Set of configuration variables for FFT-based overlapping filters.
- class **fscale_bw_t**
- class **fscale_t**
- class **fspacing_t**
Class for frequency spacing, used by filterbank shape generator class.
- class **overlap_save_filterbank_analytic_t**
- class **overlap_save_filterbank_t**
*A time-domain minimal phase filter bank with frequency shapes from **MHAOvIFilter::fftfb_t** (p. 1054).*
- class **scale_var_t**

Typedefs

- typedef **mha_real_t()** **scale_fun_t(mha_real_t)**

4.48.1 Detailed Description

Namespace for overlapping FFT based filter bank classes and functions.

4.48.2 Typedef Documentation

4.48.2.1 scale_fun_t typedef `mha_real_t()` MHAOvFilter::scale_fun_t(`mha_real_t`)

4.49 MHAOvFilter::barkscale Namespace Reference

Classes

- class `bark2hz_t`
- class `hz2bark_t`

Variables

- `mha_real_t` `vfreq` [`BARKSCALE_ENTRIES`]
- `mha_real_t` `vbark` [`BARKSCALE_ENTRIES`]

4.49.1 Variable Documentation

4.49.1.1 vfreq `mha_real_t` MHAOvFilter::barkscale::vfreq

4.49.1.2 vbark `mha_real_t` MHAOvFilter::barkscale::vbark

4.50 MHAOvFilter::FreqScaleFun Namespace Reference

Transform functions from linear scale in Hz to new frequency scales.

Functions

- `mha_real_t hz2hz (mha_real_t x)`
Dummy scale transformation Hz to Hz.
- `mha_real_t hz2khz (mha_real_t x)`
- `mha_real_t hz2octave (mha_real_t x)`
- `mha_real_t hz2third_octave (mha_real_t x)`
- `mha_real_t hz2bark (mha_real_t x)`
Transformation to bark scale.
- `mha_real_t hz2bark_analytic (mha_real_t)`
- `mha_real_t hz2erb (mha_real_t)`
- `mha_real_t hz2erb_glasberg1990 (mha_real_t)`
- `mha_real_t hz2log (mha_real_t x)`
Third octave frequency scale.
- `mha_real_t inv_scale (mha_real_t, mha_real_t(*) (mha_real_t))`

4.50.1 Detailed Description

Transform functions from linear scale in Hz to new frequency scales.

4.50.2 Function Documentation

4.50.2.1 `hz2hz()` `mha_real_t MHAOvIFilter::FreqScaleFun::hz2hz (mha_real_t x)`

Dummy scale transformation Hz to Hz.

This function implements a dummy scale transformation (linear frequency scale).

Parameters

<code>x</code>	Input frequency in Hz
----------------	-----------------------

Returns

Frequency in Hz

4.50.2.2 hz2khz() `mha_real_t MHAOvlFilter::FreqScaleFun::hz2khz (`
`mha_real_t x)`

4.50.2.3 hz2octave() `mha_real_t MHAOvlFilter::FreqScaleFun::hz2octave (`
`mha_real_t x)`

4.50.2.4 hz2third_octave() `mha_real_t MHAOvlFilter::FreqScaleFun::hz2third_octave`
`(`
`mha_real_t x)`

4.50.2.5 hz2bark() `mha_real_t MHAOvlFilter::FreqScaleFun::hz2bark (`
`mha_real_t x)`

Transformation to bark scale.

This function implements a critical band rate (bark) scale.

Parameters

x	Input frequency in Hz
---	-----------------------

Returns

Critical band rate in Bark

4.50.2.6 hz2bark_analytic() `mha_real_t MHAOvlFilter::FreqScaleFun::hz2bark_analytic`
`(`
`mha_real_t x)`

4.50.2.7 hz2erb() `mha_real_t MHAOvlFilter::FreqScaleFun::hz2erb (`
`mha_real_t x)`

4.50.2.8 hz2erb_glasberg1990() `mha_real_t MHAOvIFilter::FreqScaleFun::hz2erb_glasberg1990 (mha_real_t x)`

4.50.2.9 hz2log() `mha_real_t MHAOvIFilter::FreqScaleFun::hz2log (mha_real_t x)`

Third octave frequency scale.

This function implements a third octave scale. Frequencies below 16 Hz are mapped to 16 Hz.

Parameters

<code>x</code>	Frequency in Hz
----------------	-----------------

Returns

Third octaves relative to 1000 Hz

4.50.2.10 inv_scale() `mha_real_t MHAOvIFilter::FreqScaleFun::inv_scale (mha_real_t y, mha_real_t (*) (mha_real_t) fun)`

4.51 MHAOvIFilter::ShapeFun Namespace Reference

Shape functions for overlapping filters.

Functions

- `mha_real_t rect (mha_real_t x)`
Filter shape function for rectangular filters.
- `mha_real_t linear (mha_real_t x)`
Filter shape function for sawtooth filters.
- `mha_real_t hann (mha_real_t x)`
Filter shape function for hanning shaped filters.
- `mha_real_t expflt (mha_real_t)`
- `mha_real_t gauss (mha_real_t)`

4.51.1 Detailed Description

Shape functions for overlapping filters.

4.51.2 Function Documentation

4.51.2.1 `rect()` `mha_real_t MHAOvlFilter::ShapeFun::rect (` `mha_real_t x)`

Filter shape function for rectangular filters.

This function creates rectangular filter shapes. The edge is exactly half way between two center frequencies (on a given scale).

Parameters

<code>x</code>	Input value in the range [-1,1].
----------------	----------------------------------

Returns

Weight function in the range [0,1]

4.51.2.2 `linear()` `mha_real_t MHAOvlFilter::ShapeFun::linear (` `mha_real_t x)`

Filter shape function for sawtooth filters.

This function creates sawtooth filter shapes. They rise linearly from 0 to 1 in the interval from the lower neighbor center frequency to the band center frequency and from 1 to 0 in the interval from the band center frequency to the upper neighbour band center frequency. Linear means linear on a given frequency scale.

Parameters

<code>x</code>	Input value in the range [-1,1].
----------------	----------------------------------

Returns

Weigth function in the range [0,1]

4.51.2.3 hann() `mha_real_t MHAOvlFilter::ShapeFun::hann (mha_real_t x)`

Filter shape function for hanning shaped filters.

This function creates hanning window shaped filters.

Parameters

x	Input value in the range [-1,1].
---	----------------------------------

Returns

Weigth function in the range [0,1]

4.51.2.4 expflt() `mha_real_t MHAOvlFilter::ShapeFun::expflt (mha_real_t x)`

4.51.2.5 gauss() `mha_real_t MHAOvlFilter::ShapeFun::gauss (mha_real_t x)`

4.52 MHAParser Namespace Reference

Name space for the openMHA-Parser configuration language.

Namespaces

- **StrCnv**

String converter namespace.

Classes

- class **base_t**
Base class for all parser items.
- class **bool_mon_t**
Monitor with string value.
- class **bool_t**
Variable with a boolean value ("yes"/"no")
- class **c_ifc_parser_t**
- class **commit_t**
Parser variable with event-emission functionality.
- class **complex_mon_t**
Monitor with complex value.
- class **complex_t**
Variable with complex value.
- class **entry_t**
- class **expression_t**
- class **float_mon_t**
Monitor with float value.
- class **float_t**
Variable with float value.
- class **int_mon_t**
Monitor variable with int value.
- class **int_t**
Variable with integer value.
- class **keyword_list_t**
Keyword list class.
- class **kw_t**
Variable with keyword list value.
- class **mcomplex_mon_t**
Matrix of complex numbers monitor.
- class **mcomplex_t**
Matrix variable with complex value.
- class **mfloat_mon_t**
Matrix of floats monitor.
- class **mfloat_t**
Matrix variable with float value.
- class **mhaconfig_mon_t**
- class **mhapluginloader_t**
Class to create a plugin loader in a parser, including the load logic.
- class **mint_mon_t**
Matrix of ints monitor.
- class **mint_t**
Matrix variable with int value.
- class **monitor_t**

Base class for monitors and variable nodes.

- class **parser_t**
Parser node class.
- class **range_var_t**
Base class for all variables with a numeric value range.
- class **string_mon_t**
Monitor with string value.
- class **string_t**
Variable with a string value.
- class **variable_t**
Base class for variable nodes.
- class **vcomplex_mon_t**
Monitor with vector of complex values.
- class **vcomplex_t**
Vector variable with complex value.
- class **vfloat_mon_t**
Vector of floats monitor.
- class **vfloat_t**
Vector variable with float value.
- class **vint_mon_t**
Vector of ints monitor.
- class **vint_t**
Variable with vector<int> value.
- class **vstring_mon_t**
Vector of monitors with string value.
- class **vstring_t**
Vector variable with string values.
- class **window_t**
MHA configuration interface for a window function generator.

Typedefs

- typedef std::string(base_t::* **opact_t**) (**expression_t** &)
- typedef std::string(base_t::* **query_t**) (const std::string &)

- std::string **all_ids** (**base_t** *, const std::string &, const std::string &= "")
- void **strreplace** (std::string &, const std::string &, const std::string &)
string replace function
- void **envreplace** (std::string &s)

Variables

- const typedef char *(* **c_parse_err_t**)(void *, int)

4.52.1 Detailed Description

Name space for the openMHA-Parser configuration language.

This namespace contains all classes which are needed for the implementation of the openMHA configuration language. For details on the script language itself please see section **The openMHA configuration language** (p. 30).

4.52.2 List of valid MHAParser items

- **Sub-parser:** **parser_t** (p. 1149)
- **Variables:**
 Numeric variables: **int_t** (p. 1116), **vint_t** (p. 1178), **float_t** (p. 1110), **vfloat_t** (p. 1174), **mfloat_t** (p. 1132)
 Other variables: **string_t** (p. 1162), **vstring_t** (p. 1183), **kw_t** (p. 1122), **bool_t** (p. 1094)
- **Monitors:**
 Numeric monitors: **int_mon_t** (p. 1113), **vint_mon_t** (p. 1176), **float_mon_t** (p. 1108), **vfloat_mon_t** (p. 1172), **mfloat_mon_t** (p. 1130), **mcomplex_mon_t** (p. 1126)
 Other monitors: **bool_mon_t** (p. 1092), **string_mon_t** (p. 1160), **vstring_mon_t** (p. 1181)

Members can be inserted into the configuration namespace by using `MHAParser::insert_item()` or the `insert_member()` (p. 1692) macro.

4.52.3 Typedef Documentation

4.52.3.1 opact_t typedef std::string(base_t::* MHAParser::opact_t) (**expression_t** &)

4.52.3.2 query_t typedef std::string(base_t::* MHAParser::query_t) (const std::string &)

4.52.3.3 opact_map_t typedef std::map<std::string, opact_t> MHAParser::opact_map_t

4.52.3.4 query_map_t typedef std::map<std::string, query_t> MHAParser::query_map_t

4.52.3.5 entry_map_t typedef std::list< entry_t> MHAParser::entry_map_t

4.52.3.6 c_parse_cmd_t typedef int(* MHAParser::c_parse_cmd_t) (void *, const char *, char *, unsigned int)

4.52.4 Function Documentation

4.52.4.1 get_precision() int MHAParser::get_precision ()

4.52.4.2 commentate() `std::string MHAParser::commentate (`
`const std::string & s)`

4.52.4.3 trim() `void MHAParser::trim (`
`std::string & s)`

4.52.4.4 cfg_dump() `std::string MHAParser::cfg_dump (`
`base_t * p,`
`const std::string & pref)`

4.52.4.5 cfg_dump_short() `std::string MHAParser::cfg_dump_short (`
`base_t * p,`
`const std::string & pref)`

4.52.4.6 all_dump() `std::string MHAParser::all_dump (`
`base_t * p,`
`const std::string & pref)`

4.52.4.7 mon_dump() `std::string MHAParser::mon_dump (`
`base_t * p,`
`const std::string & pref)`

4.52.4.8 all_ids() `std::string MHAParser::all_ids (`
`base_t * p,`
`const std::string & pref,`
`const std::string & id = "")`

4.52.4.9 strreplace() `void MHAParser::strreplace (`
`std::string & s,`
`const std::string & arg,`
`const std::string & rep)`

string replace function

Parameters

<i>s</i>	target string
<i>arg</i>	search pattern
<i>rep</i>	replace pattern

4.52.4.10 envreplace() `void MHAParser::envreplace (std::string & s)`

4.52.5 Variable Documentation

4.52.5.1 c_parse_err_t `const typedef char*(* MHAParser::c_parse_err_t) (void *, int)`

4.53 MHAParser::StrCnv Namespace Reference

String converter namespace.

Functions

- int **num_brackets** (const std::string &s)
count number of brackets
- int **bracket_balance** (const std::string &s)
- void **str2val** (const std::string &, bool &)
Convert from string.
- void **str2val** (const std::string &, float &)
Convert from string.
- void **str2val** (const std::string &, **mha_complex_t** &)
Convert from string.
- void **str2val** (const std::string &, int &)
Convert from string.
- void **str2val** (const std::string &, **keyword_list_t** &)
Convert from string.
- void **str2val** (const std::string &, std::string &)
Convert from string.

- `template<class arg_t >`
`void str2val (const std::string &s, std::vector< arg_t > &val)`
Converter for vector types.
- `template<> void str2val< mha_real_t > (const std::string &s, std::vector< mha_real_t > &v)`
Converter for vector<mha_real_t> with Matlab-style expansion.
- `template<class arg_t >`
`void str2val (const std::string &s, std::vector< std::vector< arg_t > > &val)`
Converter for matrix types.

Convert to string.
- `std::string val2str (const int &)`
Convert to string.
- `std::string val2str (const keyword_list_t &)`
Convert to string.
- `std::string val2str (const std::string &)`
Convert to string.
- `std::string val2str (const std::vector< float > &)`
Convert to string.
- `std::string val2str (const std::vector< mha_complex_t > &)`
Convert to string.
- `std::string val2str (const std::vector< int > &)`
Convert to string.
- `std::string val2str (const std::vector< std::vector< int > > &)`
Convert to string.
- `std::string val2str (const std::vector< std::string > &)`
Convert to string.
- `std::string val2str (const std::vector< std::vector< float > > &)`
Convert to string.
- `std::string val2str (const std::vector< std::vector< mha_complex_t > > &)`
Convert to string.

4.53.1 Detailed Description

String converter namespace.

The functions defined in this namespace manage the conversions from C++ variables to strings and back. It was tried to keep a matlab compatible string format for vectors and vectors of vectors.

4.53.2 Function Documentation

4.53.2.1 num_brackets() `int MHAParser::StrCnv::num_brackets (const std::string & s)`

count number of brackets

Return number of brackets according to layer depth (vector:2, matrix:4, etc)

Parameters

s	String
---	--------

Returns

Number of brackets, or -1 for empty string, or -2 for invalid brackets

4.53.2.2 bracket_balance() `int MHAParser::StrCnv::bracket_balance (const std::string & s)`

4.53.2.3 str2val() [1/8] `void MHAParser::StrCnv::str2val (const std::string & s, bool & v)`

Convert from string.

4.53.2.4 str2val() [2/8] `void MHAParser::StrCnv::str2val (const std::string & s, float & v)`

Convert from string.

4.53.2.5 str2val() [3/8] void MHAParser::StrCnv::str2val (
const std::string & s,
mha_complex_t & v)

Convert from string.

4.53.2.6 str2val() [4/8] void MHAParser::StrCnv::str2val (
const std::string & s,
int & v)

Convert from string.

4.53.2.7 str2val() [5/8] void MHAParser::StrCnv::str2val (
const std::string & s,
MHAParser::keyword_list_t & v)

Convert from string.

4.53.2.8 str2val() [6/8] void MHAParser::StrCnv::str2val (
const std::string & s,
std::string & v)

Convert from string.

4.53.2.9 str2val() [7/8] template<class arg_t >
void MHAParser::StrCnv::str2val (
const std::string & s,
std::vector< arg_t > & val)

Converter for vector types.

4.53.2.10 str2val<mha_real_t>() template<>

```
void MHAParser::StrCnv::str2val< mha_real_t > (
    const std::string & s,
    std::vector< mha_real_t > & v )
```

Converter for vector<mha_real_t> with Matlab-style expansion.

4.53.2.11 str2val() [8/8] template<class arg_t >

```
void MHAParser::StrCnv::str2val (
    const std::string & s,
    std::vector< std::vector< arg_t > > & val )
```

Converter for matrix types.

4.53.2.12 val2str() [1/13] std::string MHAParser::StrCnv::val2str (
 const bool & v)

Convert to string.

4.53.2.13 val2str() [2/13] std::string MHAParser::StrCnv::val2str (
 const float & v)

Convert to string.

4.53.2.14 val2str() [3/13] std::string MHAParser::StrCnv::val2str (
 const mha_complex_t & v)

Convert to string.

4.53.2.15 val2str() [4/13] std::string MHAParser::StrCnv::val2str (
 const int & v)

Convert to string.

4.53.2.16 val2str() [5/13] `std::string MHAParser::StrCnv::val2str (`
`const keyword_list_t & v)`

Convert to string.

4.53.2.17 val2str() [6/13] `std::string MHAParser::StrCnv::val2str (`
`const std::string & v)`

Convert to string.

4.53.2.18 val2str() [7/13] `std::string MHAParser::StrCnv::val2str (`
`const std::vector< float > & v)`

Convert to string.

4.53.2.19 val2str() [8/13] `std::string MHAParser::StrCnv::val2str (`
`const std::vector< mha_complex_t > & v)`

Convert to string.

4.53.2.20 val2str() [9/13] `std::string MHAParser::StrCnv::val2str (`
`const std::vector< int > & v)`

Convert to string.

4.53.2.21 val2str() [10/13] `std::string MHAParser::StrCnv::val2str (`
`const std::vector< std::vector< int > > & v)`

Convert to string.

4.53.2.22 val2str() [11/13] `std::string MHAParser::StrCnv::val2str (const std::vector< std::string > & v)`

Convert to string.

4.53.2.23 val2str() [12/13] `std::string MHAParser::StrCnv::val2str (const std::vector< std::vector< float > > & v)`

Convert to string.

4.53.2.24 val2str() [13/13] `std::string MHAParser::StrCnv::val2str (const std::vector< std::vector< mha_complex_t > > & v)`

Convert to string.

4.54 MHAPlugin Namespace Reference

Namespace for openMHA plugin class templates and thread-safe runtime configurations.

Classes

- class **cfg_node_t**
A node class for storing MHA plugin runtime configurations as a singly linked list, where the nodes store besides the usual "next" and "data" pointers also a flag that indicates whether this node can be deleted.
- class **config_t**
Template class for thread safe configuration.
- class **plugin_t**
The template class for C++ openMHA plugins.

4.54.1 Detailed Description

Namespace for openMHA plugin class templates and thread-safe runtime configurations.

4.55 MHAPLugin_Resampling Namespace Reference

Classes

- class **resampling_if_t**
- class **resampling_t**

4.56 MHAPLugin_Split Namespace Reference

Classes

- class **domain_handler_t**
Handles domain-specific partial input and output signal.
- class **dummy_threads_t**
Dummy specification of a thread platform: This class implements everything in a single thread.
- class **posix_threads_t**
Posix threads specification of thread platform.
- class **split_t**
Implements split plugin.
- class **splitted_part_t**
*The **splitted_part_t** (p. 1230) instance manages the plugin that performs processing on the reduced set of channels.*
- class **thread_platform_t**
Basic interface for encapsulating thread creation, thread priority setting, and synchronization on any threading platform (i.e., pthreads or win32threads).
- class **uni_processor_t**
An interface to a class that sports a process method with no parameters and no return value.

Enumerations

- enum { **INVALID_THREAD_PRIORITY** = 999999999 }
Invalid thread priority.

4.56.1 Detailed Description

A namespace for the split plugin. Helps testability and documentation.

4.56.2 Enumeration Type Documentation

4.56.2.1 anonymous enum `anonymous_enum`

Invalid thread priority.

Enumerator

INVALID_THREAD_PRIORITY

4.57 MHASignal Namespace Reference

Namespace for audio signal handling and processing classes.

Classes

- class **async_rmslevel_t**
Class for asynchronous level metering.
- class **delay_spec_t**
- class **delay_t**
Class to realize a simple delay of waveform streams.
- class **delay_wave_t**
Delayline containing wave fragments.
- class **doublebuffer_t**
Double-buffering class.
- class **fft_t**
- class **hilbert_fftw_t**
- class **hilbert_t**
Hilbert transformation of a waveform segment.
- class **loop_wavefragment_t**
Copy a fixed waveform fragment to a series of waveform fragments of other size.
- class **matrix_t**
n-dimensional matrix with real or complex floating point values.
- class **minphase_t**
Minimal phase function.
- class **quantizer_t**
Simple simulation of fixpoint quantization.
- class **ringbuffer_t**
A ringbuffer class for time domain audio signal, which makes no assumptions with respect to fragment size.
- class **schroeder_t**
Schroeder tone complex class.
- class **spectrum_t**
a signal processing class for spectral data (based on [mha_spec_t](#) (p. 848))
- class **stat_t**
- class **subsample_delay_t**
implements subsample delay in spectral domain.
- class **uint_vector_t**
Vector of unsigned values, used for size and index description of n-dimensional matrixes.
- class **waveform_t**
signal processing class for waveform data (based on [mha_wave_t](#) (p. 894))

Functions

- void **for_each** (**mha_wave_t** *s, **mha_real_t**(*fun)(**mha_real_t**)
*Apply a function to each element of a **mha_wave_t** (p. 894).*
- **mha_real_t** **lin2db** (**mha_real_t** x, **mha_real_t** eps)
Conversion from linear scale to dB (no SPL reference)
- **mha_real_t** **lin2db** (**mha_real_t** x)
Conversion from linear scale to dB (no SPL reference)
- **mha_real_t** **db2lin** (**mha_real_t** x)
Conversion from dB scale to linear (no SPL reference)
- **mha_real_t** **sq2db** (**mha_real_t** x, **mha_real_t** eps=0.0f)
conversion from squared values to dB (no SPL reference)
- **mha_real_t** **db2sq** (**mha_real_t** x)
conversion from dB to squared values (no SPL reference)
- **mha_real_t** **pa2dbspl** (**mha_real_t** x, **mha_real_t** eps)
Conversion from linear Pascal scale to dB SPL.
- **mha_real_t** **pa2dbspl** (**mha_real_t** x)
Conversion from linear Pascal scale to dB SPL.
- **mha_real_t** **dbspl2pa** (**mha_real_t** x)
Conversion from dB SPL to linear Pascal scale.
- **mha_real_t** **pa22dbspl** (**mha_real_t** x, **mha_real_t** eps=0.0f)
Conversion from squared Pascal scale to dB SPL.
- **mha_real_t** **dbspl2pa2** (**mha_real_t** x)
conversion from dB SPL to squared Pascal scale
- **mha_real_t** **smp2sec** (**mha_real_t** n, **mha_real_t** srate)
conversion from samples to seconds
- **mha_real_t** **sec2smp** (**mha_real_t** sec, **mha_real_t** srate)
conversion from seconds to samples
- **mha_real_t** **bin2freq** (**mha_real_t** bin, unsigned fftlen, **mha_real_t** srate)
conversion from fft bin index to frequency
- **mha_real_t** **freq2bin** (**mha_real_t** freq, unsigned fftlen, **mha_real_t** srate)
conversion from frequency to fft bin index
- **mha_real_t** **smp2rad** (**mha_real_t** samples, unsigned bin, unsigned fftlen)
conversion from delay in samples to phase shift
- **mha_real_t** **rad2smp** (**mha_real_t** phase_shift, unsigned bin, unsigned fftlen)
conversion from phase shift to delay in samples
- template<class elem_type >
 std::vector< elem_type > **dupvec** (std::vector< elem_type > vec, unsigned n)
Duplicate last vector element to match desired size.
- template<class elem_type >
 std::vector< elem_type > **dupvec_chk** (std::vector< elem_type > vec, unsigned n)
Duplicate last vector element to match desired size, check for dimension.
- void **copy_channel** (**mha_spec_t** &self, const **mha_spec_t** &src, unsigned sch, unsigned dch)
Copy one channel of a source signal.

- void **copy_channel** (**mha_wave_t** &self, const **mha_wave_t** &src, unsigned src_↔ channel, unsigned dest_channel)
 - Copy one channel of a source signal.*
- **mha_real_t rmslevel** (const **mha_spec_t** &s, unsigned int channel, unsigned int fftlen)
 - Return RMS level of a spectrum channel.*
- **mha_real_t colored_intensity** (const **mha_spec_t** &s, unsigned int channel, unsigned int fftlen, **mha_real_t** *sqfreq_response=NULLPTR)
 - Colored spectrum intensity.*
- **mha_real_t maxabs** (const **mha_spec_t** &s, unsigned int channel)
 - Find maximal absolute value.*
- **mha_real_t rmslevel** (const **mha_wave_t** &s, unsigned int channel)
 - Return RMS level of a waveform channel.*
- **mha_real_t maxabs** (const **mha_wave_t** &s, unsigned int channel)
 - Find maximal absolute value.*
- **mha_real_t maxabs** (const **mha_wave_t** &s)
 - Find maximal absolute value.*
- **mha_real_t max** (const **mha_wave_t** &s)
 - Find maximal value.*
- **mha_real_t min** (const **mha_wave_t** &s)
 - Find minimal value.*
- **mha_real_t sumsqr_channel** (const **mha_wave_t** &s, unsigned int channel)
 - Calculate sum of squared values in one channel.*
- **mha_real_t sumsqr_frame** (const **mha_wave_t** &s, unsigned int frame)
 - Calculate sum over all channels of squared values.*
- void **scale** (**mha_spec_t** *dest, const **mha_wave_t** *src)
- void **limit** (**mha_wave_t** &s, const **mha_real_t** &min, const **mha_real_t** &max)
 - Limit the signal in the waveform buffer to the range [min, max].*
- template<class elem_type >
 - elem_type kth_smallest** (elem_type array[], unsigned n, unsigned k)
 - Fast search for the kth smallest element of an array.*
- template<class elem_type >
 - elem_type median** (elem_type array[], unsigned n)
 - Fast median search.*
- template<class elem_type >
 - elem_type mean** (const std::vector< elem_type > &data, elem_type start_val)
 - Calculate average of elements in a vector.*
- template<class elem_type >
 - std::vector< elem_type > **quantile** (std::vector< elem_type > data, const std::vector< elem_type > &p)
 - Calculate quantile of elements in a vector.*
- void **saveas_mat4** (const **mha_spec_t** &data, const std::string &varname, FILE *fh)
 - Save a openMHA spectrum as a variable in a Matlab4 file.*
- void **saveas_mat4** (const **mha_wave_t** &data, const std::string &varname, FILE *fh)
 - Save a openMHA waveform as a variable in a Matlab4 file.*
- void **saveas_mat4** (const std::vector< **mha_real_t** > &data, const std::string &varname, FILE *fh)

Save a float vector as a variable in a Matlab4 file.

- void **copy_permuted** (**mha_wave_t** *dest, const **mha_wave_t** *src)
Copy contents of a waveform to a permuted waveform.

Variables

- unsigned long int **signal_counter** = 0
Signal counter to produce signal ID strings.

4.57.1 Detailed Description

Namespace for audio signal handling and processing classes.

4.57.2 Function Documentation

4.57.2.1 for_each() void MHA_Signal::for_each (
 mha_wave_t * s,
 mha_real_t (*) (**mha_real_t**) fun) [inline]

Apply a function to each element of a **mha_wave_t** (p. 894).

Parameters

<i>s</i>	Pointer to a mha_wave_t (p. 894) structure
<i>fun</i>	Function to be applied (one argument)

4.57.2.2 lin2db() [1/2] **mha_real_t** MHA_Signal::lin2db (
 mha_real_t x,
 mha_real_t eps) [inline]

Conversion from linear scale to dB (no SPL reference)

Parameters

x	Linear input
eps	minimum linear value (if $x < eps$ --> convert eps instead), $eps < 0$ not allowed

Returns

NaN if $x < 0$ (log not defined for negative)

Exceptions

<i>MHA_Error</i> (p. 818)	if $eps < 0$
----------------------------------	--------------

4.57.2.3 lin2db() [2/2] `mha_real_t MHASignal::lin2db (`
`mha_real_t x) [inline]`

Conversion from linear scale to dB (no SPL reference)

Parameters

x	Linear input.
-----	---------------

Returns

NaN if $x < 0$ (log not defined for negative)

4.57.2.4 db2lin() `mha_real_t MHASignal::db2lin (`
`mha_real_t x) [inline]`

Conversion from dB scale to linear (no SPL reference)

Parameters

x	dB input.
-----	-----------

4.57.2.5 sq2db() `mha_real_t MHA_Signal::sq2db (`
`mha_real_t x,`
`mha_real_t eps = 0.0f) [inline]`

conversion from squared values to dB (no SPL reference)

Parameters

<code>x</code>	squared value input
<code>eps</code>	minimum squared value (if $x < \text{eps}$ --> convert eps instead), $\text{eps} < 0$ not allowed

Returns

NaN if $x < 0$ (log not defined for negative)

Exceptions

<i>MHA_Error</i> (p. 818)	if $\text{eps} < 0$
----------------------------------	---------------------

4.57.2.6 db2sq() `mha_real_t MHA_Signal::db2sq (`
`mha_real_t x) [inline]`

conversion from dB to squared values (no SPL reference)

Parameters

<code>x</code>	dB input
----------------	----------

4.57.2.7 pa2dbspl() [1/2] `mha_real_t MHA_Signal::pa2dbspl (`
`mha_real_t x,`
`mha_real_t eps) [inline]`

Conversion from linear Pascal scale to dB SPL.

Parameters

<code>x</code>	Linear input
<code>eps</code>	minimum pascal value (if $x < \text{eps}$ --> convert eps instead),

Precondition

$\text{eps} \geq 0$

Returns

NaN if $x < 0$ (logarithm not defined for negative numbers)

Exceptions

<i>MHA_Error</i> (p. 818)	if $\text{eps} < 0$
---------------------------	---------------------

4.57.2.8 pa2dbspl() [2/2] `mha_real_t MHASignal::pa2dbspl (`
`mha_real_t x) [inline]`

Conversion from linear Pascal scale to dB SPL.

Parameters

<i>x</i>	Linear input
----------	--------------

Returns

NaN if $x < 0$ (log not defined for negative)

4.57.2.9 dbspl2pa() `mha_real_t MHASignal::dbspl2pa (`
`mha_real_t x) [inline]`

Conversion from dB SPL to linear Pascal scale.

Parameters

<i>x</i>	Linear input.
----------	---------------

4.57.2.10 pa22dbspl() `mha_real_t MHASignal::pa22dbspl (`

```

mha_real_t x,
mha_real_t eps = 0.0f ) [inline]

```

Conversion from squared Pascal scale to dB SPL.

Parameters

<i>x</i>	squared pascal input
<i>eps</i>	minimum squared-pascal value (if $x < \text{eps}$ --> convert eps instead), $\text{eps} < 0$ not allowed

Returns

NaN if $x < 0$ (log not defined for negative)

Exceptions

<i>MHA_Error</i> (p. 818)	if $\text{eps} < 0$
----------------------------------	---------------------

4.57.2.11 db SPL to squared Pascal scale `mha_real_t MHASignal::db SPL to squared Pascal scale (mha_real_t x) [inline]`

conversion from dB SPL to squared Pascal scale

Parameters

<i>x</i>	dB SPL input
----------	--------------

4.57.2.12 samples to seconds `mha_real_t MHASignal::samples to seconds (mha_real_t n, mha_real_t srate) [inline]`

conversion from samples to seconds

Parameters

<i>n</i>	number of samples
<i>srate</i>	sampling rate / Hz

4.57.2.13 sec2smp() `mha_real_t MHASignal::sec2smp (`
`mha_real_t sec,`
`mha_real_t srate) [inline]`

conversion from seconds to samples

Parameters

<i>sec</i>	time in seconds
<i>srate</i>	sampling rate / Hz

Returns

number of samples, generally has non-zero fractional part

4.57.2.14 scale() `void MHASignal::scale (`
`mha_spec_t * dest,`
`const mha_wave_t * src)`

4.57.2.15 limit() `void MHASignal::limit (`
`mha_wave_t & s,`
`const mha_real_t & min,`
`const mha_real_t & max)`

Limit the signal in the waveform buffer to the range [min, max].

Parameters

<i>s</i>	The signal to limit. The signal in this wave buffer is modified.
<i>min</i>	lower limit
<i>max</i>	upper limit

4.57.2.16 kth_smallest() `template<class elem_type >`
`elem_type MHASignal::kth_smallest (`

```

elem_type array[],
unsigned n,
unsigned k )

```

Fast search for the kth smallest element of an array.

The order of elements is altered, but not completely sorted. Using the algorithm from N. Wirth, published in "Algorithms + data structures = programs", Prentice-Hall, 1976

Parameters

<i>array</i>	Element array
--------------	---------------

Postcondition

The order of elements in the array is altered. `array[k]` then holds the result.

Parameters

<i>n</i>	number of elements in array
----------	-----------------------------

Precondition

$n \geq 1$

Parameters

<i>k</i>	The k'th smallest element is returned: $k = 0$ returns the minimum, $k = (n-1)/2$ returns the median, $k=(n-1)$ returns the maximum
----------	---

Precondition

$k < n$

Returns

The kth smallest array element

```
4.57.2.17 median() template<class elem_type >
elem_type MHASignal::median (
    elem_type array[],
    unsigned n ) [inline]
```

Fast median search.

The order of elements is altered, but not completely sorted.

Parameters

<i>array</i>	Element array
--------------	---------------

Postcondition

The order of elements in the array is altered. `array[(n-1)/2]` then holds the median.

Parameters

<i>n</i>	number of elements in array
----------	-----------------------------

Precondition

$n \geq 1$

Returns

The median of the array elements

4.57.2.18 mean() `template<class elem_type >`
`elem_type MHASignal::mean (`
`const std::vector< elem_type > & data,`
`elem_type start_val) [inline]`

Calculate average of elements in a vector.

Parameters

<i>data</i>	Input vector
<i>start_val</i>	Value for initialization of the return value before sum.

Returns

The average of the vector elements

```
4.57.2.19 quantile() template<class elem_type >
std::vector<elem_type> MHASignal::quantile (
    std::vector< elem_type > data,
    const std::vector< elem_type > & p ) [inline]
```

Calculate quantile of elements in a vector.

Parameters

<i>data</i>	Input vector
<i>p</i>	Vector of probability values.

Returns

Vector of quantiles of input data, one entry for each probability value.

```
4.57.2.20 saveas_mat4() [1/3] void MHASignal::saveas_mat4 (
    const mha_spec_t & data,
    const std::string & varname,
    FILE * fh )
```

Save a openMHA spectrum as a variable in a Matlab4 file.

Parameters

<i>data</i>	openMHA spectrum to be saved.
<i>varname</i>	Matlab variable name (Matlab4 limitations on maximal length are not checked).
<i>fh</i>	File handle to Matlab4 file.

```
4.57.2.21 saveas_mat4() [2/3] void MHASignal::saveas_mat4 (
    const mha_wave_t & data,
    const std::string & varname,
    FILE * fh )
```

Save a openMHA waveform as a variable in a Matlab4 file.

Parameters

<i>data</i>	openMHA waveform to be saved.
<i>varname</i>	Matlab variable name (Matlab4 limitations on maximal length are not checked).
<i>fh</i>	File handle to Matlab4 file.

4.57.2.22 saveas_mat4() [3/3] `void MHASignal::saveas_mat4 (`
`const std::vector< mha_real_t > & data,`
`const std::string & varname,`
`FILE * fh)`

Save a float vector as a variable in a Matlab4 file.

Parameters

<i>data</i>	Float vector to be saved.
<i>varname</i>	Matlab variable name (Matlab4 limitations on maximal length are not checked).
<i>fh</i>	File handle to Matlab4 file.

4.57.2.23 copy_permuted() `void MHASignal::copy_permuted (`
`mha_wave_t * dest,`
`const mha_wave_t * src)`

Copy contents of a waveform to a permuted waveform.

Parameters

<i>dest</i>	Destination waveform
<i>src</i>	Source waveform

The total size of *src* and *dest* must be the same, *num_frames* and *num_channels* must be exchanged in *dest*.

4.57.3 Variable Documentation

4.57.3.1 signal_counter `unsigned long int MHASignal::signal_counter = 0`

Signal counter to produce signal ID strings.

4.58 MHASndFile Namespace Reference

Classes

- class `sf_t`
- class `sf_wave_t`

4.59 MHATableLookup Namespace Reference

Namespace for table lookup classes.

Classes

- class `linear_table_t`
Class for interpolation with equidistant x values.
- class `table_t`
- class `xy_table_t`
Class for interpolation with non-equidistant x values.

4.59.1 Detailed Description

Namespace for table lookup classes.

4.60 MHAUtils Namespace Reference

Functions

- bool `is_multiple_of` (const unsigned big, const unsigned small)
- bool `is_power_of_two` (const unsigned n)
- bool `is_multiple_of_by_power_of_two` (const unsigned big, const unsigned small)
- std::string `strip` (const std::string &line)
- std::string `remove` (const std::string &str_, char c)
- bool `is_denormal` (`mha_real_t` x)
Get the normal-ness of a `mha_real_t`.
- bool `is_denormal` (const `mha_complex_t` &x)
Get the normal-ness of a complex number.
- bool `is_denormal` (const std::complex< `mha_real_t` > &x)
Get the normal-ness of a complex number.
- `mha_real_t` `spl2hl` (`mha_real_t` f)
Get the offset of between dB(SPL) and dB(HL) for a given frequency according to ISO 389-7↔:2005 (freefield); e.g.

4.60.1 Function Documentation

4.60.1.1 is_multiple_of() `bool MHAUtils::is_multiple_of (`
 `const unsigned big,`
 `const unsigned small) [inline]`

4.60.1.2 is_power_of_two() `bool MHAUtils::is_power_of_two (`
 `const unsigned n) [inline]`

4.60.1.3 is_multiple_of_by_power_of_two() `bool MHAUtils::is_multiple_of_by_power↔`
`_of_two (`
 `const unsigned big,`
 `const unsigned small) [inline]`

4.60.1.4 strip() `std::string MHAUtils::strip (`
 `const std::string & line) [inline]`

4.60.1.5 remove() `std::string MHAUtils::remove (`
 `const std::string & str_,`
 `char c) [inline]`

4.60.1.6 is_denormal() [1/3] `bool MHAUtils::is_denormal (`
 `mha_real_t x) [inline]`

Get the normal-ness of a `mha_real_t`.

Returns true iff `x` is not equal to zero and the absolute value of `x` is smaller than the minimum positive normalized value of `mha_real_t`.

Parameters

<i>x</i>	A <code>mha_real_t</code> floating point number
----------	---

Returns

True if *x* is denormal, false otherwise

4.60.1.7 `is_denormal()` [2/3] `bool MHAUtils::is_denormal (const mha_complex_t & x) [inline]`

Get the normal-ness of a complex number.

Overload for `mha_complex_t` (p. 799). Returns true iff one or both of real and imaginary part are denormal

Parameters

<i>x</i>	[in] A <code>mha_complex_t</code> (p. 799) number
----------	---

Returns

True if at least one component of *x* is denormal, false otherwise

4.60.1.8 `is_denormal()` [3/3] `bool MHAUtils::is_denormal (const std::complex< mha_real_t > & x) [inline]`

Get the normal-ness of a complex number.

Overload for `std::complex` Returns true iff one or both of real and imaginary part are denormal.

Parameters

<i>x</i>	[in] A <code>mha_complex_t</code> (p. 799) number
----------	---

Returns

True if at least one component of x is denormal, false otherwise

4.60.1.9 spl2hl() `mha_real_t MHAUtils::spl2hl (`
`mha_real_t f)`

Get the offset of between dB(SPL) and dB(HL) for a given frequency according to ISO 389-7↵:2005 (freefield); e.g.

an intensity of 22.1 dB(SPL) at 125 Hz is equivalent to 0 dB(HL), so `spl2hl(125)=-22.1`. Interpolation between mesh points is linear. The correction values for frequencies above 16 kHz are extrapolated."

Parameters

<code>in</code>	<code>f</code>	The frequency in Hz for which the offset shall be returned
-----------------	----------------	--

Returns

The offset between dB(SPL) and dB(HL) at frequency f

Exceptions

<i>MHA_Error</i> (p. 818)	if $f < 0$
----------------------------------	------------

4.61 MHAWindow Namespace Reference

Collection of Window types.

Classes

- class **bartlett_t**
Bartlett window.
- class **base_t**
Common base for window types.
- class **blackman_t**
Blackman window.
- class **fun_t**

Generic window based on a generator function.

- class **hamming_t**
Hamming window.
- class **hanning_t**
von-Hann window
- class **rect_t**
Rectangular window.
- class **user_t**
User defined window.

Functions

- float **rect** (float)
Rectangular window function.
- float **bartlett** (float)
Bartlett window function.
- float **hanning** (float)
Hanning window function.
- float **hamming** (float)
Hamming window function.
- float **blackman** (float)
Blackman window function.

4.61.1 Detailed Description

Collection of Window types.

4.61.2 Function Documentation

4.61.2.1 rect() float MHAWindow::rect (
float x)

Rectangular window function.

4.61.2.2 bartlett() `float MHAWindow::bartlett (`
`float x)`

Bartlett window function.

4.61.2.3 hanning() `float MHAWindow::hanning (`
`float x)`

Hanning window function.

4.61.2.4 hamming() `float MHAWindow::hamming (`
`float x)`

Hamming window function.

4.61.2.5 blackman() `float MHAWindow::blackman (`
`float x)`

Blackman window function.

4.62 multibandcompressor Namespace Reference

Classes

- class `fftfb_plug_t`
- class `interface_t`
- class `plugin_signals_t`

4.63 noise_psd_estimator Namespace Reference

Classes

- class `noise_psd_estimator_if_t`
- class `noise_psd_estimator_t`

4.64 overlapadd Namespace Reference

Classes

- class **overlapadd_if_t**
- class **overlapadd_t**

4.65 plingploing Namespace Reference

All classes for the plingploing music generator live in this namespace.

Classes

- class **if_t**
Plugin class of the plingploing music generator.
- class **plingploing_t**
Run-time configuration of the plingploing music generator.

Functions

- double **drand** (double a, double b)

4.65.1 Detailed Description

All classes for the plingploing music generator live in this namespace.

4.65.2 Function Documentation

4.65.2.1 drand() `double plingploing::drand (`
 `double a,`
 `double b)`

4.66 PluginLoader Namespace Reference

Classes

- class **config_file_splitter_t**
- class **fourway_processor_t**

This abstract class defines the interface for classes that implement all types of signal domain processing supported by the MHA: `wave2wave`, `spec2spec`, `wave2spec`, and `spec2wave`.

- class **mhapluginloader_t**

Functions

- const char * **mhastrdomain** (**mha_domain_t**)
- void **mhaconfig_compare** (const **mhaconfig_t** &req, const **mhaconfig_t** &avail, const std::string &pref="")

*Compare two **mhaconfig_t** (p. 905) structures, and report differences as an error.*

4.66.1 Function Documentation

4.66.1.1 mhastrdomain() `const char * PluginLoader::mhastrdomain (mha_domain_t d)`

4.66.1.2 mhaconfig_compare() `void PluginLoader::mhaconfig_compare (const mhaconfig_t & req, const mhaconfig_t & avail, const std::string & pref = "")`

Compare two **mhaconfig_t** (p. 905) structures, and report differences as an error.

Parameters

<i>req</i>	Expected mhaconfig_t (p. 905) structure
<i>avail</i>	Available mhaconfig_t (p. 905) structure
<i>pref</i>	Prefix for error messages

4.67 plugins Namespace Reference

Namespaces

- `hoertech`

4.68 plugins::hoertech Namespace Reference

Namespaces

- `acrec`

4.69 plugins::hoertech::acrec Namespace Reference

Classes

- class `acrec_t`
Plugin interface class of plugin acrec.
- class `acwriter_t`
`acwriter_t` (p. 1430) decouples signal processing from writing to disk.

Functions

- `std::string to_iso8601 (time_t tm)`

4.69.1 Function Documentation

4.69.1.1 `to_iso8601()` `std::string plugins::hoertech::acrec::to_iso8601 (time_t tm)`

4.70 rmslevel Namespace Reference

Classes

- class `rmslevel_if_t`
Rmslevel plugin.

Enumerations

- enum **UNIT** { **UNIT::SPL** =0, **UNIT::HL** =1 }

4.70.1 Enumeration Type Documentation

4.70.1.1 **UNIT** enum **rmslevel::UNIT** [strong]

Enumerator

SPL	
HL	

4.71 rohBeam Namespace Reference

Classes

- struct **configOptions**
- class **rohBeam**
- class **rohConfig**

Functions

- double **j0** (double x)
Cylindrical bessel function of the first kind of order 0.

Variables

- auto **scalarify** = [](auto t){return t(0);}
- constexpr float **CONST_C** = 343.0115f
- constexpr int **refL** = 0
- constexpr int **refR** = 3

4.71.1 Function Documentation

4.71.1.1 j0() `double rohBeam::j0 (`
`double x)`

Cylindrical bessel function of the first kind of order 0.

Parameters

<i>x</i>	the argument of the function
----------	------------------------------

Returns

$j_0(x)$

4.71.2 Variable Documentation

4.71.2.1 scalarify `auto rohBeam::scalarify = [](auto t){return t(0);}`

4.71.2.2 CONST_C `constexpr float rohBeam::CONST_C = 343.0115f [constexpr]`

4.71.2.3 refL `constexpr int rohBeam::refL = 0 [constexpr]`

4.71.2.4 refR `constexpr int rohBeam::refR = 3 [constexpr]`

- class `config_parser_t`
- class `if_t`
- class `signal_parser_t`

4.78 trigger2lsl Namespace Reference

namespace for `trigger2lsl` (p. 163) plugin

Classes

- class `trigger2lsl_if_t`
Plugin interface class of plugin `trigger2lsl` (p. 163).
- class `trigger2lsl_rt_t`
real-time configuration class for `trigger2lsl` (p. 163) plugin

4.78.1 Detailed Description

namespace for **trigger2IsI** (p. 163) plugin

4.79 wave2IsI Namespace Reference

All types for the **wave2IsI** (p. 164) plugins live in this namespace.

Classes

- class **cfg_t**
*Runtime configuration class of the **wave2IsI** (p. 164) plugin.*
- class **wave2IsI_t**
*Plugin class of **wave2IsI** (p. 164).*

4.79.1 Detailed Description

All types for the **wave2IsI** (p. 164) plugins live in this namespace.

4.80 windnoise Namespace Reference

namespace for plugin windnoise which detects and cancels wind noise

Classes

- class **cfg_t**
Runtime config class for windnoise plugin.
- class **if_t**
interface class for windnoise plugin

4.80.1 Detailed Description

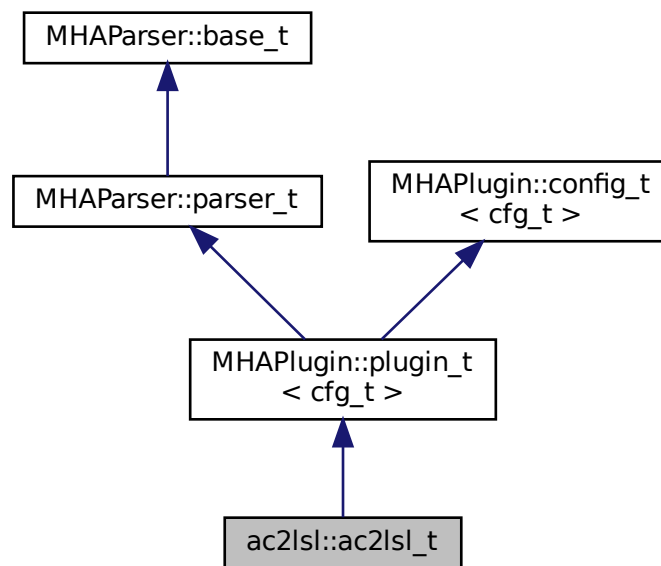

namespace for plugin windnoise which detects and cancels wind noise

5 Class Documentation

5.1 ac2lsl::ac2lsl_t Class Reference

Plugin class of **ac2lsl** (p. 78).

Inheritance diagram for ac2lsl::ac2lsl_t:

Public Member Functions

- **ac2lsl_t** (**MHA_AC::algo_comm_t** &iac, const std::string &configured_name)
- void **prepare** (**mhaconfig_t** &)
*Prepare constructs the vector of bridge variables and locks the configuration, then calls **update()** (p. 167).*
- **mha_wave_t*** **process** (**mha_wave_t***s)
Processing fct for waveforms.
- **mha_spec_t*** **process** (**mha_spec_t***s)
Processing fct for spectra.
- void **process** ()
Process function.
- void **release** ()
Release fct.

Private Member Functions

- void **update** ()
Construct new runtime configuration.

Private Attributes

- **MHAParser::vstring_t** vars
- **MHAParser::string_t** source_id
- **MHAParser::bool_t** rt_strict
- **MHAParser::bool_t** activate
- **MHAParser::int_t** skip
- **MHAParser::float_t** nominal_srate
- **MHAEvents::patchbay_t** < **ac2lsl_t** > patchbay
- bool is_first_run

Additional Inherited Members

5.1.1 Detailed Description

Plugin class of **ac2lsl** (p. 78).

5.1.2 Constructor & Destructor Documentation

5.1.2.1 ac2lsl_t() `ac2lsl::ac2lsl_t::ac2lsl_t (MHA_AC::algo_comm_t & iac, const std::string & configured_name)`

5.1.3 Member Function Documentation

5.1.3.1 prepare() `void ac2lsl::ac2lsl_t::prepare (mhaconfig_t &) [virtual]`

Prepare constructs the vector of bridge variables and locks the configuration, then calls **update()** (p. 167).

Implements **MHAPLugin::plugin_t< cfg_t >** (p. 1201).

5.1.3.2 process() [1/3] `mha_wave_t* ac2lsl::ac2lsl_t::process (mha_wave_t * s) [inline]`

Processing fct for waveforms.

Calls **process(void)** (p. 167).

5.1.3.3 process() [2/3] `mha_spec_t* ac2lsl::ac2lsl_t::process (mha_spec_t * s) [inline]`

Processing fct for spectra.

Calls **process(void)** (p. 167).

5.1.3.4 process() [3/3] `void ac2lsl::ac2lsl_t::process ()`

Process function.

Checks once if the plugin is run in a real-time thread and throws if `rt_strict` is true, then forwards to **cfg_t::process()** (p. 170).

5.1.3.5 release() `void ac2lsl::ac2lsl_t::release () [virtual]`

Release fct.

Unlocks variable name list

Reimplemented from **MHAPLugin::plugin_t< cfg_t >** (p. 1202).

5.1.3.6 update() `void ac2lsl::ac2lsl_t::update () [private]`

Construct new runtime configuration.

5.1.4 Member Data Documentation

5.1.4.1 vars `MHAParser::vstring_t ac2lsl::ac2lsl_t::vars [private]`

5.1.4.2 source_id `MHAParser::string_t ac2lsl::ac2lsl_t::source_id [private]`

5.1.4.3 rt_strict `MHAParser::bool_t ac2lsl::ac2lsl_t::rt_strict [private]`

5.1.4.4 activate `MHAParser::bool_t ac2lsl::ac2lsl_t::activate [private]`

5.1.4.5 skip `MHAParser::int_t ac2lsl::ac2lsl_t::skip [private]`

5.1.4.6 nominal_srate `MHAParser::float_t ac2lsl::ac2lsl_t::nominal_srate [private]`

5.1.4.7 patchbay `MHAEvents::patchbay_t< ac2lsl_t> ac2lsl::ac2lsl_t::patchbay [private]`

5.1.4.8 is_first_run `bool ac2lsl::ac2lsl_t::is_first_run [private]`

The documentation for this class was generated from the following file:

- **ac2lsl.cpp**

5.2 ac2lsl::cfg_t Class Reference

Runtime configuration class of the **ac2lsl** (p. 78) plugin.

Public Member Functions

- **cfg_t** (**MHA_AC::algo_comm_t** &ac_, unsigned skip_, const std::string & **source_id**, const std::vector< std::string > &varnames_, double rate)
*C'tor of **ac2lsl** (p. 78) run time configuration.*
- void **process** ()

Private Member Functions

- void **create_or_replace_var** (const std::string &name, const **MHA_AC::comm_var_t** &v)
- void **check_and_send** ()

Private Attributes

- std::map< std::string, std::unique_ptr< **save_var_base_t** > > **varlist**
Maps variable name to unique ptr's of ac to lsl bridges.
- unsigned **skipcnt**
Counter of frames to skip.
- const unsigned **skip**
Number of frames to skip after each send.
- const double **srate**
Sampling rate of the stream.
- const std::string **source_id**
User configurable source id.
- const **MHA_AC::algo_comm_t** & **ac**
Handle to the ac space.

5.2.1 Detailed Description

Runtime configuration class of the **ac2lsl** (p. 78) plugin.

5.2.2 Constructor & Destructor Documentation

5.2.2.1 `cfg_t()` `cfg_t::cfg_t (`
 `MHA_AC::algo_comm_t & ac_,`
 `unsigned skip_,`
 `const std::string & source_id,`
 `const std::vector< std::string > & varnames_,`
 `double rate)`

C'tor of `ac2lsl` (p. 78) run time configuration.

Parameters

<code>ac_</code>	AC space, source of data to send over LSL
<code>skip_</code>	Number of frames to skip after each send
<code>source_id</code>	LSL identifier for this data stream
<code>varnames_</code>	Names of AC variables to send over LSL
<code>rate</code>	Rate with wich chunks of data are sent to the LSL stream. Usually the rate with which process calls happen, but may be lower due to the subsampling caused by <code>skip_</code>

5.2.3 Member Function Documentation

5.2.3.1 `create_or_replace_var()` `void cfg_t::create_or_replace_var (`
 `const std::string & name,`
 `const MHA_AC::comm_var_t & v) [private]`

5.2.3.2 `check_and_send()` `void cfg_t::check_and_send () [private]`

5.2.3.3 `process()` `void cfg_t::process ()`

5.2.4 Member Data Documentation

5.2.4.1 varlist `std::map<std::string, std::unique_ptr< save_var_base_t > > ac2lsl↔
::cfg_t::varlist [private]`

Maps variable name to unique ptr's of ac to lsl bridges.

5.2.4.2 skipcnt `unsigned ac2lsl::cfg_t::skipcnt [private]`

Counter of frames to skip.

5.2.4.3 skip `const unsigned ac2lsl::cfg_t::skip [private]`

Number of frames to skip after each send.

5.2.4.4 srate `const double ac2lsl::cfg_t::srate [private]`

Sampling rate of the stream.

5.2.4.5 source_id `const std::string ac2lsl::cfg_t::source_id [private]`

User configurable source id.

5.2.4.6 ac `const MHA_AC::algo_comm_t& ac2lsl::cfg_t::ac [private]`

Handle to the ac space.

The documentation for this class was generated from the following file:

- **ac2lsl.cpp**

5.3 ac2lsl::save_var_base_t Class Reference

Interface for ac to lsl bridge variable.

Inheritance diagram for ac2lsl::save_var_base_t:

Public Member Functions

- virtual void **send_frame** (unsigned num_entries)=0
- virtual void * **get_buf_address** () const noexcept=0
- virtual void **set_buf_address** (void *data)=0
- virtual lsl::stream_info **info** () const noexcept=0
- virtual unsigned **data_type** () const noexcept=0
- virtual **~save_var_base_t** ()=default

5.3.1 Detailed Description

Interface for ac to lsl bridge variable.

5.3.2 Constructor & Destructor Documentation

5.3.2.1 `~save_var_base_t()` virtual ac2lsl::save_var_base_t::~~save_var_base_t ()
[virtual], [default]

5.3.3 Member Function Documentation

5.3.3.1 send_frame() `virtual void ac2lsl::save_var_base_t::send_frame (unsigned num_entries) [pure virtual]`

Implemented in `ac2lsl::save_var_t< mha_complex_t >` (p. 180), and `ac2lsl::save_var_t< T >` (p. 176).

5.3.3.2 get_buf_address() `virtual void* ac2lsl::save_var_base_t::get_buf_address () const [pure virtual], [noexcept]`

Implemented in `ac2lsl::save_var_t< mha_complex_t >` (p. 179), and `ac2lsl::save_var_t< T >` (p. 175).

5.3.3.3 set_buf_address() `virtual void ac2lsl::save_var_base_t::set_buf_address (void * data) [pure virtual]`

Implemented in `ac2lsl::save_var_t< mha_complex_t >` (p. 179), and `ac2lsl::save_var_t< T >` (p. 176).

5.3.3.4 info() `virtual lsl::stream_info ac2lsl::save_var_base_t::info () const [pure virtual], [noexcept]`

Implemented in `ac2lsl::save_var_t< mha_complex_t >` (p. 180), and `ac2lsl::save_var_t< T >` (p. 176).

5.3.3.5 data_type() `virtual unsigned ac2lsl::save_var_base_t::data_type () const [pure virtual], [noexcept]`

Implemented in `ac2lsl::save_var_t< mha_complex_t >` (p. 180), and `ac2lsl::save_var_t< T >` (p. 176).

The documentation for this class was generated from the following file:

- `ac2lsl.cpp`

5.4 ac2Isl::save_var_t< T > Class Template Reference

Implementation for all ac to Isl bridges except complex types.

Inheritance diagram for ac2Isl::save_var_t< T >:

Public Member Functions

- **save_var_t** (const std::string &name_, const std::string &type_, unsigned num_↔ channels_, const **mha_real_t** rate_, const Isl::channel_format_t format_, const std::string &source_id_, void *data_, const unsigned **data_type_**)
C'tor of generic ac to Isl bridge.
- virtual void * **get_buf_address** () const noexcept override
Get buffer address as void pointer.
- virtual void **set_buf_address** (void *data) override
Cast the input pointer to the appropriate type and set the buffer address.
- virtual Isl::stream_info **info** () const noexcept override
Get stream info object from stream outlet.
- virtual unsigned **data_type** () const noexcept override
Get data type id according MHA convention.
- virtual ~**save_var_t** ()=default
- virtual void **send_frame** (unsigned num_entries) override
Send a frame to Isl.

Private Attributes

- Isl::stream_outlet **stream**
LSL stream outlet.
- T * **buf**
Pointer to data buffer of the ac variable.
- const unsigned **data_type_**
Data type id according to MHA convention.

5.4.1 Detailed Description

```
template<typename T>
class ac2lsl::save_var_t< T >
```

Implementation for all ac to lsl bridges except complex types.

5.4.2 Constructor & Destructor Documentation

```
5.4.2.1 save_var_t() template<typename T >
ac2lsl::save_var_t< T >:: save_var_t (
    const std::string & name_,
    const std::string & type_,
    unsigned num_channels_,
    const mha_real_t rate_,
    const lsl::channel_format_t format_,
    const std::string & source_id_,
    void * data_,
    const unsigned data_type_ ) [inline]
```

C'tor of generic ac to lsl bridge.

Parameters

<i>info</i>	LSL stream info object containing metadata
<i>data</i>	Pointer to data buffer of the ac variable
<i>data_type</i>	Type id of the stream, in mha convention. Should be set to one if not a vector.

```
5.4.2.2 ~save_var_t() template<typename T >
virtual ac2lsl::save_var_t< T >::~ save_var_t ( ) [virtual], [default]
```

5.4.3 Member Function Documentation

5.4.3.1 get_buf_address() `template<typename T >`
`virtual void* ac2lsl::save_var_t< T >::get_buf_address () const [inline], [override],`
`[virtual], [noexcept]`

Get buffer address as void pointer.

Returns

Adress of the data buffer

Implements `ac2lsl::save_var_base_t` (p. 173).

5.4.3.2 set_buf_address() `template<typename T >`
`virtual void ac2lsl::save_var_t< T >::set_buf_address (`
`void * data) [inline], [override], [virtual]`

Cast the input pointer to the appropriate type and set the buffer address.

Parameters

<i>data</i>	New buffer address
-------------	--------------------

Implements `ac2lsl::save_var_base_t` (p. 173).

5.4.3.3 info() `template<typename T >`
`virtual lsl::stream_info ac2lsl::save_var_t< T >::info () const [inline], [override],`
`[virtual], [noexcept]`

Get stream info object from stream outlet.

Implements `ac2lsl::save_var_base_t` (p. 173).

5.4.3.4 data_type() `template<typename T >`
`virtual unsigned ac2lsl::save_var_t< T >::data_type () const [inline], [override],`
`[virtual], [noexcept]`

Get data type id according MHA convention.

Implements `ac2lsl::save_var_base_t` (p. 173).

```
5.4.3.5 send_frame() template<typename T >  
virtual void ac2lsl::save_var_t< T >::send_frame (  
    unsigned num_entries ) [inline], [override], [virtual]
```

Send a frame to lsl.

Implements `ac2lsl::save_var_base_t` (p. 173).

5.4.4 Member Data Documentation

```
5.4.4.1 stream template<typename T >  
lsl::stream_outlet ac2lsl::save_var_t< T >::stream [private]
```

LSL stream outlet.

Interface to lsl

```
5.4.4.2 buf template<typename T >  
T* ac2lsl::save_var_t< T >::buf [private]
```

Pointer to data buffer of the ac variable.

```
5.4.4.3 data_type_ template<typename T >  
const unsigned ac2lsl::save_var_t< T >::data_type_ [private]
```

Data type id according to MHA convention.

The documentation for this class was generated from the following file:

- `ac2lsl.cpp`

5.5 ac2lsl::save_var_t< mha_complex_t > Class Reference

Template specialization of the **ac2lsl** (p. 78) bridge to take care of complex numbers.

Inheritance diagram for ac2lsl::save_var_t< mha_complex_t >:

Public Member Functions

- **save_var_t** (const std::string &name_, const std::string &type_, unsigned num_↔ channels_, const **mha_real_t** rate_, const lsl::channel_format_t format_, const std::string &source_id_, void *data_)
C'tor of specialization for complex types.
- virtual void * **get_buf_address** () const noexcept override
- virtual void **set_buf_address** (void *data) override
- virtual lsl::stream_info **info** () const noexcept override
Get buffer address as void pointer.
- virtual unsigned **data_type** () const noexcept override
Cast the input pointer to the appropriate type and set the buffer address.
- virtual ~**save_var_t** ()=default
- virtual void **send_frame** (unsigned num_entries) override
Send a frame of complex types.

Private Attributes

- lsl::stream_outlet **stream**
LSL stream outlet.
- **mha_complex_t** * **buf**
Pointer to data buffer of the ac variable.

5.5.1 Detailed Description

Template specialization of the **ac2lsl** (p. 78) bridge to take care of complex numbers.

This specialization is needed because lsl does not support complex numbers. Order is [re(0), im(0), re(1), im(1),]

5.5.2 Constructor & Destructor Documentation

5.5.2.1 save_var_t() `ac2lsl::save_var_t< mha_complex_t >:: save_var_t (`
`const std::string & name_,`
`const std::string & type_,`
`unsigned num_channels_,`
`const mha_real_t rate_,`
`const lsl::channel_format_t format_,`
`const std::string & source_id_,`
`void * data_) [inline]`

C'tor of specialization for complex types.

See generic c'tor for details.

5.5.2.2 ~save_var_t() `virtual ac2lsl::save_var_t< mha_complex_t >::~~ save_var_t`
`() [virtual], [default]`

5.5.3 Member Function Documentation

5.5.3.1 get_buf_address() `virtual void* ac2lsl::save_var_t< mha_complex_t >↔`
`::get_buf_address () const [inline], [override], [virtual], [noexcept]`

Implements **ac2lsl::save_var_base_t** (p. 173).

5.5.3.2 set_buf_address() virtual void `ac2lsl::save_var_t< mha_complex_t >`
`::set_buf_address (`
 void * *data*) [inline], [override], [virtual]

Implements `ac2lsl::save_var_base_t` (p. 173).

5.5.3.3 info() virtual `lsl::stream_info` `ac2lsl::save_var_t< mha_complex_t >`
`::info`
 () const [inline], [override], [virtual], [noexcept]

Get buffer address as void pointer.

Returns

Adress of the data buffer

Implements `ac2lsl::save_var_base_t` (p. 173).

5.5.3.4 data_type() virtual unsigned `ac2lsl::save_var_t< mha_complex_t >`
`::data_↔`
 type () const [inline], [override], [virtual], [noexcept]

Cast the input pointer to the appropriate type and set the buffer address.

Parameters

<i>data</i>	New buffer address
-------------	--------------------

Implements `ac2lsl::save_var_base_t` (p. 173).

5.5.3.5 send_frame() virtual void `ac2lsl::save_var_t< mha_complex_t >`
`::send_↔`
 frame (

unsigned *num_entries*) [inline], [override], [virtual]

Send a frame of complex types.

Complex numbers are stored as alternating real and imaginary parts. An array of complex numbers in memory can be reinterpreted as a vector of real numbers that correspond to real and imaginary parts. LSL does not support complex types directly. Send one vector containing {buf[0].re,buf[0].im,buf[1].re,buf[1].im,...} instead.

Implements `ac2lsl::save_var_base_t` (p. 173).

5.5.4 Member Data Documentation

5.5.4.1 stream `lsl::stream_outlet ac2lsl::save_var_t< mha_complex_t >::stream`
[private]

LSL stream outlet.

Interface to lsl

5.5.4.2 buf `mha_complex_t* ac2lsl::save_var_t< mha_complex_t >::buf` [private]

Pointer to data buffer of the ac variable.

The documentation for this class was generated from the following file:

- **ac2lsl.cpp**

5.6 ac2lsl::type_info Struct Reference

Public Attributes

- `const std::string name`
- `const lsl::channel_format_t format`

5.6.1 Member Data Documentation

5.6.1.1 name `const std::string ac2lsl::type_info::name`

5.6.1.2 format `const lsl::channel_format_t ac2lsl::type_info::format`

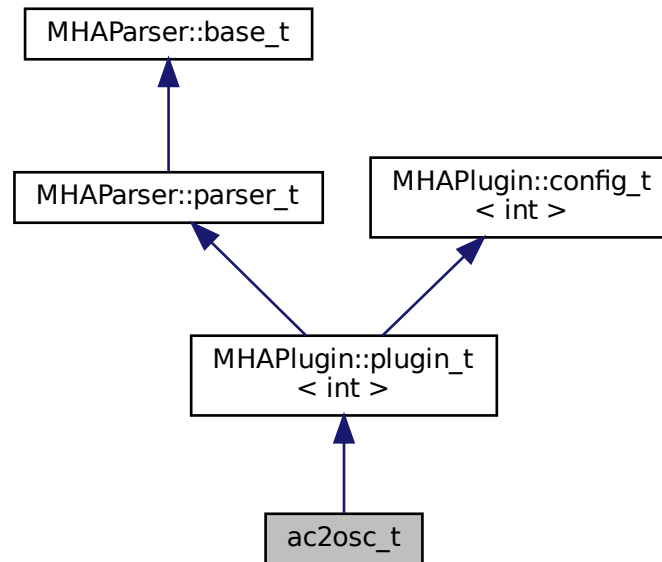

The documentation for this struct was generated from the following file:

- **ac2lsl.cpp**

5.7 ac2osc_t Class Reference

Plugin class of the ac2osc plugin.

Inheritance diagram for ac2osc_t:

Public Member Functions

- **ac2osc_t** (**MHA_AC::algo_comm_t** &iac, const std::string &configured_name)
C'tor of plugin class.
- void **prepare** (**mhaconfig_t** &)
- **mha_wave_t** * **process** (**mha_wave_t** *s)
Processing fct for waveforms.
- **mha_spec_t** * **process** (**mha_spec_t** *s)
Processing fct for spectra.
- void **process** ()
Process function.
- void **release** ()
Release frees osc related memory, does cleanup.

Private Member Functions

- void **send_osc_float** ()
- void **update_mode** ()
Start/Stop sending of messages.

Private Attributes

- **MHAParser::string_t host**
OSC server host name.
- **MHAParser::string_t port**
OSC server port.
- **MHAParser::int_t ttl**
Time-to-live of UDP packages.
- **MHAParser::vstring_t vars**
List of AC variables to be saved, empty for all.
- **MHAParser::kw_t mode**
Record mode.
- **MHAParser::int_t skip**
number of frames to skip after sending
- **MHAParser::bool_t rt_strict**
abort if used in real-time thread?
- `std::unique_ptr< MHA_AC::acspace2matrix_t > acspace`
- `MHAEvents::patchbay_t< ac2osc_t > patchbay`
- `bool b_record`
- `uint8_t * rtmem`
- `float framerate`
- `int skipcnt`
- `lo_address lo_addr`
- `bool is_first_run`

Additional Inherited Members

5.7.1 Detailed Description

Plugin class of the ac2osc plugin.

5.7.2 Constructor & Destructor Documentation

5.7.2.1 ac2osc_t() `ac2osc_t::ac2osc_t (`
`MHA_AC::algo_comm_t & iac,`
`const std::string & configured_name)`

C'tor of plugin class.

5.7.3 Member Function Documentation

5.7.3.1 prepare() `void ac2osc_t::prepare (mhaconfig_t & cf) [virtual]`

Implements **MHAPlugin::plugin_t< int >** (p. 1201).

5.7.3.2 process() [1/3] `mha_wave_t* ac2osc_t::process (mha_wave_t * s) [inline]`

Processing fct for waveforms.

Calls **process(void)** (p. 184).

5.7.3.3 process() [2/3] `mha_spec_t* ac2osc_t::process (mha_spec_t * s) [inline]`

Processing fct for spectra.

Calls **process(void)** (p. 184).

5.7.3.4 process() [3/3] `void ac2osc_t::process ()`

Process function.

Checks once if the plugin is run in a real-time thread and throws if `rt_strict` is true, sends osc messages according to config.

5.7.3.5 release() `void ac2osc_t::release () [virtual]`

Release frees osc related memory, does cleanup.

Reimplemented from **MHAPlugin::plugin_t< int >** (p. 1202).

5.7.3.6 send_osc_float() `void ac2osc_t::send_osc_float () [private]`

5.7.3.7 update_mode() `void ac2osc_t::update_mode () [private]`

Start/Stop sending of messages.

5.7.4 Member Data Documentation

5.7.4.1 host `MHAParser::string_t ac2osc_t::host [private]`

OSC server host name.

5.7.4.2 port `MHAParser::string_t ac2osc_t::port [private]`

OSC server port.

5.7.4.3 ttl `MHAParser::int_t ac2osc_t::ttl [private]`

Time-to-live of UDP packages.

5.7.4.4 vars `MHAParser::vstring_t ac2osc_t::vars [private]`

List of AC variables to be saved, empty for all.

5.7.4.5 mode `MHAParser::kw_t ac2osc_t::mode [private]`

Record mode.

5.7.4.6 skip `MHAParser::int_t ac2osc_t::skip [private]`

number of frames to skip after sending

5.7.4.7 rt_strict `MHAParser::bool_t ac2osc_t::rt_strict [private]`

abort if used in real-time thread?

5.7.4.8 acspace `std::unique_ptr< MHA_AC::acspace2matrix_t > ac2osc_t::acspace [private]`

5.7.4.9 patchbay `MHAEvents::patchbay_t< ac2osc_t > ac2osc_t::patchbay [private]`

5.7.4.10 b_record `bool ac2osc_t::b_record [private]`

5.7.4.11 rtmem `uint8_t* ac2osc_t::rtmem [private]`

5.7.4.12 framerate `float ac2osc_t::framerate [private]`

5.7.4.13 skipcnt `int ac2osc_t::skipcnt [private]`

5.7.4.14 lo_addr `lo_address ac2osc_t::lo_addr [private]`

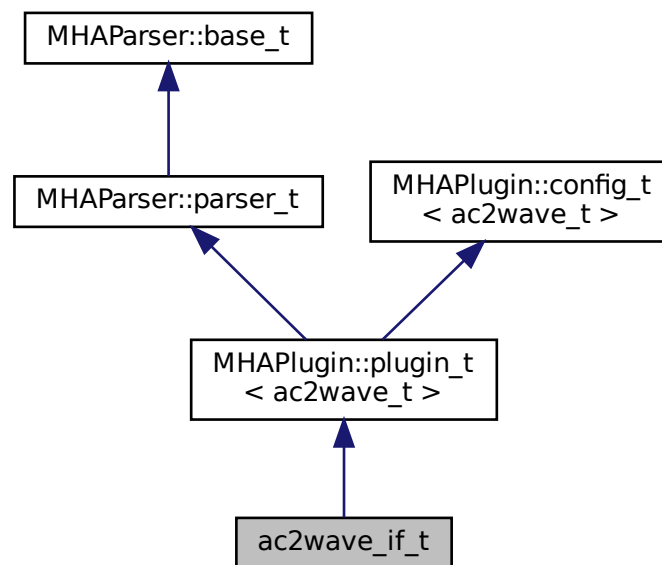

5.7.4.15 is_first_run `bool ac2osc_t::is_first_run [private]`

5.10 ac2xdf::ac2xdf_if_t Class Reference

Plugin interface class of plugin **ac2xdf** (p. 79).

Inheritance diagram for ac2xdf::ac2xdf_if_t:

Public Member Functions

- `template<class mha_signal_t >`
`mha_signal_t * process (mha_signal_t *s)`
Process callback.
- `void prepare (mhaconfig_t &)`
Prepare callback.
- `void release ()`
Ensure recorded data is flushed to disk.
- `ac2xdf_if_t (algo_comm_t &iac, const std::string &)`
Plugin interface constructor.

Private Member Functions

- `void start_new_session ()`
Configuration callback called whenever configuration variable "record" is written to.

Private Attributes

- `MHAParser::bool_t record`
- `MHAParser::int_t fifolen`
- `MHAParser::int_t minwrite`
- `MHAParser::string_t prefix`
- `MHAParser::vstring_t varnames`

- `MHAParser::bool_t use_date`
- `MHAEvents::patchbay_t< ac2xdf_if_t > patchbay`

Additional Inherited Members

5.10.1 Detailed Description

Plugin interface class of plugin `ac2xdf` (p. 79).

5.10.2 Constructor & Destructor Documentation

5.10.2.1 `ac2xdf_if_t()` `ac2xdf::ac2xdf_if_t::ac2xdf_if_t (`
`algo_comm_t & iac,`
`const std::string &) [inline]`

Plugin interface constructor.

Parameters

<i>iac</i>	Algorithm communication variable space.
------------	---

5.10.3 Member Function Documentation

5.10.3.1 `process()` `template<class mha_signal_t >`
`mha_signal_t* ac2xdf::ac2xdf_if_t::process (`
`mha_signal_t * s) [inline]`

Process callback.

Pushes the data from one AC variable into the fifo.

Returns

the unmodified input signal.

Parameters

<i>s</i>	input signal. The audio signal is not used or modified.
----------	---

5.10.3.2 prepare() `void ac2xdf::ac2xdf_if_t::prepare (mhaconfig_t &) [inline], [virtual]`

Prepare callback.

ac2xdf (p. 79) does not modify the signal parameters.

Parameters

<i>cf</i>	The signal parameters.
-----------	------------------------

Implements **MHAPlugin::plugin_t< ac2xdf_rt_t >** (p. 1201).

5.10.3.3 release() `void ac2xdf::ac2xdf_if_t::release () [inline], [virtual]`

Ensure recorded data is flushed to disk.

Reimplemented from **MHAPlugin::plugin_t< ac2xdf_rt_t >** (p. 1202).

5.10.3.4 start_new_session() `void ac2xdf::ac2xdf_if_t::start_new_session () [inline], [private]`

Configuration callback called whenever configuration variable "record" is written to.

Always flush the old file if there's one.

5.10.4 Member Data Documentation

5.10.4.1 record `MHAParser::bool_t ac2xdf::ac2xdf_if_t::record` [private]

5.10.4.2 fifolen `MHAParser::int_t ac2xdf::ac2xdf_if_t::fifolen` [private]

5.10.4.3 minwrite `MHAParser::int_t ac2xdf::ac2xdf_if_t::minwrite` [private]

5.10.4.4 prefix `MHAParser::string_t ac2xdf::ac2xdf_if_t::prefix` [private]

5.10.4.5 varnames `MHAParser::vstring_t ac2xdf::ac2xdf_if_t::varnames` [private]

5.10.4.6 nominal_sampling_rates `MHAParser::vfloat_t ac2xdf::ac2xdf_if_t::nominal←
_sampling_rates` [private]

5.10.4.7 use_date `MHAParser::bool_t ac2xdf::ac2xdf_if_t::use_date` [private]

5.10.4.8 patchbay `MHAEvents::patchbay_t< ac2xdf_if_t> ac2xdf::ac2xdf_if_t::patchbay`
[private]

The documentation for this class was generated from the following file:

- std::unique_ptr< **output_file_t** > **outfile**

5.11.1 Constructor & Destructor Documentation

5.11.1.1 ac2xdf_rt_t() `ac2xdf::ac2xdf_rt_t::ac2xdf_rt_t (const std::string prefix, bool use_date, bool active, unsigned fifosize, unsigned minwrite, const std::vector< std::string > & varnames, const std::vector< mha_real_t > & sampling_rates, algo_comm_t & iac) [inline]`

5.11.2 Member Function Documentation

5.11.2.1 process() `void ac2xdf::ac2xdf_rt_t::process () [inline]`

5.11.2.2 exit_request() `void ac2xdf::ac2xdf_rt_t::exit_request () [inline]`

5.11.3 Member Data Documentation

5.11.3.1 ac `MHA_AC::algo_comm_t& ac2xdf::ac2xdf_rt_t::ac` [private]

5.11.3.2 vars `std::vector<std::unique_ptr< acwriter_base_t > > ac2xdf::ac2xdf_rt_t::vars` [private]

5.11.3.3 outfile `std::unique_ptr< output_file_t > ac2xdf::ac2xdf_rt_t::outfile` [private]

The documentation for this class was generated from the following file:

- `ac2xdf.cpp`

5.12 ac2xdf::acwriter_base_t Class Reference

Base class for all `acwriter_t` (p. 200)'s.

Inheritance diagram for `ac2xdf::acwriter_base_t`:

Public Member Functions

- virtual void **process** (**comm_var_t** &)=0
Place the data present in the algorithm communication variable into the fifo for output to disk.
- virtual void **exit_request** ()=0
Terminate output thread. Returns after exit thread has joined.
- virtual const char * **get_varname** () const =0
getter for ac variable name
- virtual ~**acwriter_base_t** ()=default

5.12.1 Detailed Description

Base class for all **acwriter_t** (p. 200)'s.

This class decouples signal processing from writing to disk. There's one acwriter per AC variable to be written to disk. Each instance of acwriter spawns its own writer thread and has its own internal FIFO to safely move the samples of the AC variable out of the processing thread. All acwriters share an output file. It's not problematic when an acwriter has to wait for write access because the waiting does happen in its own thread, not in the audio thread.

5.12.2 Constructor & Destructor Documentation

5.12.2.1 ~**acwriter_base_t**() `virtual ac2xdf::acwriter_base_t::~~acwriter_base_t ()`
[virtual], [default]

5.12.3 Member Function Documentation

5.12.3.1 **process**() `virtual void ac2xdf::acwriter_base_t::process (`
`comm_var_t &) [pure virtual]`

Place the data present in the algorithm communication variable into the fifo for output to disk.

Implemented in **ac2xdf::acwriter_t**< T > (p. 203).

5.12.3.2 exit_request() `virtual void ac2xdf::acwriter_base_t::exit_request () [pure virtual]`

Terminate output thread. Returns after exit thread has joined.

Implemented in `ac2xdf::acwriter_t< T >` (p. 203).

5.12.3.3 get_varname() `virtual const char* ac2xdf::acwriter_base_t::get_varname () const [pure virtual]`

getter for ac variable name

Returns

name as `char*` as needed by `get_var`

Implemented in `ac2xdf::acwriter_t< T >` (p. 203).

The documentation for this class was generated from the following file:

- `ac2xdf.hh`

5.13 `ac2xdf::acwriter_t< T >` Class Template Reference

Inheritance diagram for `ac2xdf::acwriter_t< T >`:

Public Member Functions

- **acwriter_t** (bool **active**, unsigned **fifosize**, unsigned **minwrite**, const std::string & **varname**, double **sampling_rate**, **output_file_t** * **outfile**, uint32_t **stream_id**)
Constructor allocates fifo and disk output buffer.
- **acwriter_t** (const **acwriter_t** &)=delete
- **acwriter_t** (**acwriter_t** &&)=delete
- virtual **~acwriter_t** ()=default
Deallocates memory but does not terminate the write_thread.
- void **process** (**comm_var_t** &s) override
- void **exit_request** () override
Terminate output thread.
- const char * **get_varname** () const override

Private Member Functions

- void **write_thread** ()
Main method of the disk writer thread.

Private Attributes

- std::atomic< bool > **close_session**
cross-thread-synchronization.
- const bool **active**
The writer thread and the output file will only be created when active is true.
- std::unique_ptr< **mha_fifo_if_t**< T > > **fifo**
Fifo for decoupling signal processing thread from disk writer thread.
- const unsigned int **disk_write_threshold_min_num_samples**
Minimum number of samples that need to be waiting in the fifo before the disk writer thread writes them to disk.
- std::thread **writethread**
The thread that writes to disk.
- std::unique_ptr< T[]> **diskbuffer**
Intermediate buffer to receive data from fifo and store on disk.
- **output_file_t** * **outfile**
Output file.
- unsigned **num_channels** = 0U
Number of channels of AC variable using stride.
- bool **is_num_channels_known** = false
The number of channels is determined during the first process callback.
- bool **is_complex** = false
If the AC variable is of complex valued type or not.
- unsigned int **data_type** = **MHA_AC_UNKNOWN**
Data type of the ac variable. Used to protect against data type change during processing.
- const std::string **varname**
The name of the ac variable to publish.
- const uint32_t **stream_id**
- bool **is_stream_initialized** =false
- double **sampling_rate**

5.13.1 Constructor & Destructor Documentation

5.13.1.1 acwriter_t() [1/3] `template<typename T >`
`ac2xdf::acwriter_t< T >:: acwriter_t (`
 `bool active,`
 `unsigned fifosize,`
 `unsigned minwrite,`
 `const std::string & varname,`
 `double sampling_rate,`
 `output_file_t * outfile,`
 `uint32_t stream_id)`

Constructor allocates fifo and disk output buffer.

It spawns a new thread for writing data to disk when `active==true`. In order to terminate the thread, method `exit_request` **must** be called before this object is destroyed.

Parameters

<i>active</i>	Only write data to disk when this is true.
<i>fifosize</i>	Capacity of both the fifo pipeline and of the disk buffer.
<i>minwrite</i>	Wait for a fifo fill count of at least <code>minwrite</code> doubles before flushing the contents of the fifo to disk. Fifo is also flushed before this object is destroyed.
<i>varname</i>	Name of AC variable to save into file. Can be accessed through getter method <code>get_varname()</code> (p. 203). Stored here to avoid races between processing thread and configuration thread.
<i>outfile</i>	Handle to the output file
<i>stream↔ _id</i>	Numerical id of the stream.

5.13.1.2 acwriter_t() [2/3] `template<typename T >`
`ac2xdf::acwriter_t< T >:: acwriter_t (`
 `const acwriter_t< T > &) [delete]`

5.13.1.3 acwriter_t() [3/3] `template<typename T >`
`ac2xdf::acwriter_t< T >:: acwriter_t (`
 `acwriter_t< T > &&) [delete]`

5.13.1.4 `~acwriter_t()` `template<typename T >`
`virtual ac2xdf::acwriter_t< T >::~acwriter_t () [virtual], [default]`

Deallocates memory but does not terminate the `write_thread`.

`write_thread` must be terminated before the destructor executes by calling `exit_request`.

5.13.2 Member Function Documentation

5.13.2.1 `process()` `template<typename T >`
`void ac2xdf::acwriter_t< T >::process (`
`comm_var_t & s) [override], [virtual]`

Implements `ac2xdf::acwriter_base_t` (p. 199).

5.13.2.2 `exit_request()` `template<typename T >`
`void ac2xdf::acwriter_t< T >::exit_request [override], [virtual]`

Terminate output thread.

Implements `ac2xdf::acwriter_base_t` (p. 199).

5.13.2.3 `get_varname()` `template<typename T >`
`const char* ac2xdf::acwriter_t< T >::get_varname () const [inline], [override],`
`[virtual]`

Implements `ac2xdf::acwriter_base_t` (p. 200).

5.13.2.4 `write_thread()` `template<typename T >`
`void ac2xdf::acwriter_t< T >::write_thread [private]`

Main method of the disk writer thread.

Periodically wakes up and checks if data needs to be written to disk.

5.13.3 Member Data Documentation

5.13.3.1 `close_session` `template<typename T >`

```
std::atomic<bool> ac2xdf::acwriter_t< T >::close_session [private]
```

cross-thread-synchronization.

`write_thread()` (p. 203) terminates after this is set to true by `exit_request()` (p. 203).

5.13.3.2 `active` `template<typename T >`

```
const bool ac2xdf::acwriter_t< T >::active [private]
```

The writer thread and the output file will only be created when `active` is true.

5.13.3.3 `fifo` `template<typename T >`

```
std::unique_ptr< mha_fifo_lf_t<T> > ac2xdf::acwriter_t< T >::fifo [private]
```

Fifo for decoupling signal processing thread from disk writer thread.

5.13.3.4 `disk_write_threshold_min_num_samples` `template<typename T >`

```
const unsigned int ac2xdf::acwriter_t< T >::disk_write_threshold_min_num_samples  
[private]
```

Minimum number of samples that need to be waiting in the fifo before the disk writer thread writes them to disk.

5.13.3.5 `writethread` `template<typename T >`

```
std::thread ac2xdf::acwriter_t< T >::writethread [private]
```

The thread that writes to disk.

5.13.3.6 diskbuffer `template<typename T >`
`std::unique_ptr<T[]> ac2xdf::acwriter_t< T >::diskbuffer [private]`

Intermediate buffer to receive data from fifo and store on disk.

5.13.3.7 outfile `template<typename T >`
`output_file_t* ac2xdf::acwriter_t< T >::outfile [private]`

Output file.

5.13.3.8 num_channels `template<typename T >`
`unsigned ac2xdf::acwriter_t< T >::num_channels = 0U [private]`

Number of channels of AC variable using stride.

If the number of channels changes during processing, an exception is thrown.

5.13.3.9 is_num_channels_known `template<typename T >`
`bool ac2xdf::acwriter_t< T >::is_num_channels_known = false [private]`

The number of channels is determined during the first process callback.

`is_num_channels_known` is set to true after the first process callback.

5.13.3.10 is_complex `template<typename T >`
`bool ac2xdf::acwriter_t< T >::is_complex = false [private]`

If the AC variable is of complex valued type or not.

If this changes during processing, then an exception is thrown.

5.13.3.11 data_type `template<typename T >`
`unsigned int ac2xdf::acwriter_t< T >::data_type = MHA_AC_UNKNOWN [private]`

Data type of the ac variable. Used to protect against data type change during processing.

```
5.13.3.12 varname template<typename T >
const std::string ac2xdf::acwriter_t< T >::varname [private]
```

The name of the ac variable to publish.

```
5.13.3.13 stream_id template<typename T >
const uint32_t ac2xdf::acwriter_t< T >::stream_id [private]
```

```
5.13.3.14 is_stream_initialized template<typename T >
bool ac2xdf::acwriter_t< T >::is_stream_initialized =false [private]
```

```
5.13.3.15 sampling_rate template<typename T >
double ac2xdf::acwriter_t< T >::sampling_rate [private]
```

5.14 **ac2xdf::output_file_t** Class Reference

output_file_t (p. 206) represents one XDF output file.

Public Member Functions

- **output_file_t** (const std::string &prefix, bool use_date)
Constructor.
- void **initialize_stream** (uint32_t stream_id, const std::string &varname, const std::string &channel_format, unsigned num_channels, double sampling_rate=0)
Initialize stream.
- template<typename T = double>
void **write** (uint32_t stream_id, const T *buf, std::size_t frames, std::size_t **channels**)
Write data chunk to the stream with id stream_id.
- void **close_stream** (uint32_t stream_id)
Close stream with id stream_id by writing stream footer.

Private Attributes

- `std::mutex` **write_lock**
Mutex to protect write access to the output file.
- `std::unique_ptr< XDFWriter >` **outfile**
XDFWriter. Handles the translation into the xdf format and disk writes.

5.14.1 Detailed Description

`output_file_t` (p. 206) represents one XDF output file.

It wraps around the `XDFWriter` class, which handles the conversion of a stream into the bits and bytes on disk. Access to the output file protected by a lock. There's usually one output file per plugin instance shared by all acwriters.

5.14.2 Constructor & Destructor Documentation

5.14.2.1 `output_file_t()` `ac2xdf::output_file_t::output_file_t (`
`const std::string & prefix,`
`bool use_date)`

Constructor.

Parameters

<i>prefix</i>	Path and start of output file name. Will be extended with file name extension ".xdf".
<i>use_date</i>	When true, the current date and time will be appended to the output file name before the file name extension.

5.14.3 Member Function Documentation

5.14.3.1 `initialize_stream()` `void ac2xdf::output_file_t::initialize_stream (`
`uint32_t stream_id,`

```

const std::string & varname,
const std::string & channel_format,
unsigned num_channels,
double sampling_rate = 0 )

```

Initialize stream.

Writes a minimal stream header and a boundary chunk

Parameters

<i>stream_id</i>	Numerical stream id.
<i>varname</i>	Human-readable stream id. Gets saved as stream name in metadata
<i>channel_format</i>	Data type of the stream, gets written into the channel_format metadata. must be one of {"int8", "int16", "int32", "int64", "float32", "double64", "string"}
<i>num_channels</i>	Number of channels in stream to be written in metadata
<i>sampling_rate</i>	Nominal sampling rate in Hz. To be written in metadata. Zero means irregular rate

```

5.14.3.2 write() template<typename T >
template void ac2xdf::output_file_t::write< mha_real_t > (
    uint32_t stream_id,
    const T * buf,
    std::size_t frames,
    std::size_t channels )

```

Write data chunk to the stream with id stream_id.

Parameters

<i>stream_id</i>	The stream id.
<i>buf</i>	Pointer to buffer containing frames entries. The caller retains ownership of buf.
<i>Pointer</i>	to buffer containing frames * channels (p. 38) values. Interleaved storage: The first channels (p. 38) values in memory contain the values of the first frame, etc. The caller retains ownership of buf.
<i>frames</i>	Number of entries per channel in buf.
<i>channels</i>	Number of channels in buf.

```

5.14.3.3 close_stream() void ac2xdf::output_file_t::close_stream (

```

```
uint32_t stream_id )
```

Close stream with id `stream_id` by writing stream footer.

Parameters

<code>stream_id</code>	Numeric ID of the stream to be closed
------------------------	---------------------------------------

5.14.4 Member Data Documentation

5.14.4.1 write_lock `std::mutex ac2xdf::output_file_t::write_lock` [private]

Mutex to protect write access to the output file.

5.14.4.2 outfile `std::unique_ptr<XDFWriter> ac2xdf::output_file_t::outfile` [private]

XDFWriter. Handles the translation into the xdf format and disk writes.

The documentation for this class was generated from the following files:

- `ac2xdf.hh`
- `ac2xdf.cpp`

5.15 `ac_mul_t` Class Reference

The class which implements the `ac_mul_t` (p. 209) plugin.

Inheritance diagram for `ac_mul_t`:

Public Member Functions

- `ac_mul_t (MHA_AC::algo_comm_t &iac, const std::string &configured_name)`
Plugin constructor.
- `void prepare_ (mhaconfig_t &)`
Prepare method, called `prepare_()` (p. 211) with trailing underscore because `ac_mul_t` (p. 209) does not inherit from `plugin_t<>`.

Additional Inherited Members

5.15.1 Detailed Description

The class which implements the **ac_mul_t** (p. 209) plugin.

Different from most other plugins, the `ac_mul` plugin's interface class does not inherit from `plugin_t<>`, but from **MHAParser::string_t** (p. 1162). This way, it does not get inserted into the MHA configuration tree as a parser node which can have multiple variables, but as a string variable.

The **ac_mul_t** (p. 209) variable multiplies two AC variables element-wise.

5.15.2 Constructor & Destructor Documentation

5.15.2.1 ac_mul_t() `ac_mul_t::ac_mul_t (`
 MHA_AC::algo_comm_t & *iac*,
 const `std::string` & *configured_name*)

Plugin constructor.

5.15.3 Member Function Documentation

5.15.3.1 prepare_() `void ac_mul_t::prepare_ (mhaconfig_t &)`

Prepare method, called **prepare_()** (p. 211) with trailing underscore because **ac_mul_t** (p. 209) does not inherit from `plugin_t<>`.

Leaves signal dimensions unchanged. The AC variables contained in the string expression must exist at this point.

5.15.3.2 release_() `void ac_mul_t::release_ ()`

5.15.3.3 process() [1/3] `mha_wave_t * ac_mul_t::process (mha_wave_t * s)`

5.15.3.4 process() [2/3] `mha_spec_t * ac_mul_t::process (mha_spec_t * s)`

5.15.3.5 scan_syntax() `void ac_mul_t::scan_syntax () [private]`

5.15.3.6 get_arg_type_and_dimension() [1/2] `void ac_mul_t::get_arg_type_and_dimension () [private]`

5.15.3.7 get_arg_type_and_dimension() [2/2] `void ac_mul_t::get_arg_type_and_dimension (const std::string & name, val_type_t & vt, unsigned int & num_frames, unsigned int & num_channels) [private]`

5.15.3.8 process() [3/3] void ac_mul_t::process () [private]

5.15.3.9 process_rr() void ac_mul_t::process_rr () [private]

5.15.3.10 process_rc() void ac_mul_t::process_rc () [private]

5.15.3.11 process_cr() void ac_mul_t::process_cr () [private]

5.15.3.12 process_cc() void ac_mul_t::process_cc () [private]

5.15.4 Member Data Documentation

5.15.4.1 ac MHA_AC::algo_comm_t& ac_mul_t::ac [private]

5.15.4.2 algo std::string ac_mul_t::algo [private]

5.19 acmon::ac_monitor_t Class Reference

A class for converting AC variables to Parser monitors of correct type.

Public Member Functions

- **ac_monitor_t** (**MHAParser::parser_t** &parent, const std::string &name_, **MHA_AC::algo_comm_t** &ac, bool use_matrix)
Converts AC variable to parser monitor.
- void **getvar** (**MHA_AC::algo_comm_t** &ac)
Update values of monitor.

Public Attributes

- std::string **name**
name of AC variable and parser monitor
- std::string **dimstr**
columns x rows
- **MHAParser::vfloat_mon_t** **mon**
Monitor used for real vectors.
- **MHAParser::mfloat_mon_t** **mon_mat**
Monitor used for real matrices.
- **MHAParser::vcomplex_mon_t** **mon_complex**
monitor used for complex vectors
- **MHAParser::mcomplex_mon_t** **mon_mat_complex**
monitor used for complex matrices
- **MHAParser::string_mon_t** **mon_string**
- **MHAParser::parser_t** & **p_parser**
parent parser to insert monitor into

Private Attributes

- bool **use_mat**
if true, use matrix monitor, else use vector monitor

5.19.1 Detailed Description

A class for converting AC variables to Parser monitors of correct type.

5.19.2 Constructor & Destructor Documentation

5.19.2.1 ac_monitor_t() `acmon::ac_monitor_t::ac_monitor_t (MHAParser::parser_t & parent, const std::string & name_, MHA_AC::algo_comm_t & ac, bool use_matrix)`

Converts AC variable to parser monitor.

Parameters

<i>parent</i>	The parser to insert a monitor into
<i>name_</i>	The name of the AC variable and the monitor variable
<i>ac</i>	Handle to algorithm communication space
<i>use_matrix</i>	Indicates if a matrix monitor type should be used.

5.19.3 Member Function Documentation
5.19.3.1 getvar() `void acmon::ac_monitor_t::getvar (`
`MHA_AC::algo_comm_t & ac)`

Update values of monitor.

Parameters

<i>ac</i>	Handle to algorithm communication space
-----------	---

5.19.4 Member Data Documentation
5.19.4.1 name `std::string acmon::ac_monitor_t::name`

name of AC variable and parser monitor

5.19.4.2 dimstr `std::string acmon::ac_monitor_t::dimstr`

columns x rows

5.19.4.3 mon `MHAParser::vfloat_mon_t acmon::ac_monitor_t::mon`

Monitor used for real vectors.

5.19.4.4 mon_mat `MHAParser::mfloat_mon_t acmon::ac_monitor_t::mon_mat`

Monitor used for real matrices.

5.19.4.5 mon_complex `MHAParser::vcomplex_mon_t acmon::ac_monitor_t::mon_complex`

monitor used for complex vectors

5.19.4.6 mon_mat_complex `MHAParser::mcomplex_mon_t acmon::ac_monitor_t::mon_↔
mat_complex`

monitor used for complex matrices

5.19.4.7 mon_string `MHAParser::string_mon_t acmon::ac_monitor_t::mon_string`**5.19.4.8 p_parser** `MHAParser::parser_t& acmon::ac_monitor_t::p_parser`

parent parser to insert monitor into

5.19.4.9 use_mat `bool acmon::ac_monitor_t::use_mat [private]`

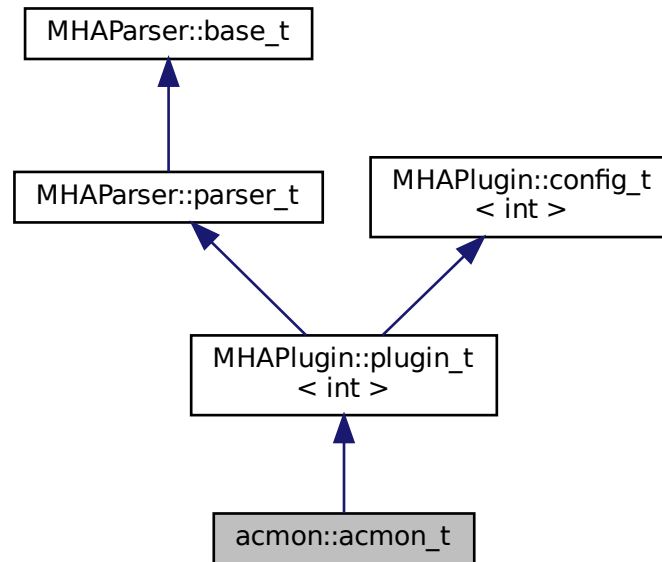

if true, use matrix monitor, else use vector monitor

The documentation for this class was generated from the following files:

5.31 adaptive_feedback_canceller Class Reference

Inheritance diagram for adaptive_feedback_canceller:

Public Member Functions

- **adaptive_feedback_canceller** (**MHA_AC::algo_comm_t** & **ac**, const std::string &configured_name)
Constructs our plugin.
- **~adaptive_feedback_canceller** ()
- **mha_wave_t*** **process** (**mha_wave_t***)
- void **prepare** (**mhaconfig_t** &)
Plugin preparation.
- void **release** ()

Public Attributes

- **MHAParser::float_t** stepsize
- **MHAParser::float_t** min_const
- **MHAParser::int_t** filter_length
- **MHAParser::mhapluginloader_t** plugloader

Plugin loader that loads the plugin needed to simulate the hearing aid in the forward processing path.

- **MHAParser::int_t fragsize**

Fragsize for computing `adaptive_feedback_canceller::delay_roundtrip` and `adaptive_feedback_canceller::delay_update`, defaults to the MHA's fragsize.

- **MHAParser::vint_t measured_roundtrip_latency**

The roundtrip latency describes the timespan between playing back and receiving the same signal, including delays induced by soundcard buffering and the transducers.

- **MHAParser::bool_t use_lpc_decorr**

Boolean defining whether decorrelation using LPC-filtering of microphone and loudspeaker signal should be performed.

- **MHAParser::int_t lpc_order**

- **MHAParser::vint_t delay_forward_path**

- **MHAParser::int_t blocks_no_update**

- **MHAParser::bool_t debug_mode**

`debug_mode` (p. 263) == true provides more variables in the AC-space that are useful for debugging, including `FBfilter_estim_ac`, `ERRsig_ac`, `current_power_ac`, `estim_err_ac`

`MHA_AC::algo_comm_t & ac,`
`const std::string & configured_name)`

Constructs our plugin.

5.31.1.2 `~adaptive_feedback_canceller()` `adaptive_feedback_canceller::~~adaptive_↔
feedback_canceller ()`

5.31.2 Member Function Documentation

5.31.2.1 `process()` `mha_wave_t * adaptive_feedback_canceller::process (
mha_wave_t * signal)`

5.31.2.2 `prepare()` `void adaptive_feedback_canceller::prepare (
mhaconfig_t & signal_info) [virtual]`

Plugin preparation.

An opportunity to validate configuration parameters before instantiating a configuration.

Parameters

<i>signal_info</i>	Structure containing a description of the form of the signal (domain, number of channels, frames per block, sampling rate).
--------------------	---

Implements `MHAPlugin::plugin_t< adaptive_feedback_canceller_config >` (p. 1201).

5.31.2.3 `release()` `void adaptive_feedback_canceller::release () [virtual]`

Reimplemented from `MHAPlugin::plugin_t< adaptive_feedback_canceller_config >` (p. 1202).

5.31.2.4 `update_cfg()` `void adaptive_feedback_canceller::update_cfg () [private]`

5.31.3 Member Data Documentation

5.31.3.1 stepsize `MHAParser::float_t` `adaptive_feedback_canceller::stepsize`

5.31.3.2 min_const `MHAParser::float_t` `adaptive_feedback_canceller::min_const`

5.31.3.3 filter_length `MHAParser::int_t` `adaptive_feedback_canceller::filter_length`

5.31.3.4 plugloader `MHAParser::mhapluginloader_t` `adaptive_feedback_canceller↔
::plugloader`

Plugin loader that loads the plugin needed to simulate the hearing aid in the forward processing path.

5.31.3.5 fragsize `MHAParser::int_t` `adaptive_feedback_canceller::fragsize`

Fragsize for computing `adaptive_feedback_canceller::delay_roundtrip` and `adaptive_↔
feedback_canceller::delay_update`, defaults to the MHA's fragsize.

It is assumed that the soundcard's and the MHA's fragsize are equal. In special cases, the user can set this variable to an individual value.

5.31.3.6 measured_roundtrip_latency `MHAParser::vint_t` `adaptive_feedback_canceller↔
::measured_roundtrip_latency`

The roundtrip latency describes the timespan between playing back and receiving the same signal, including delays induced by soundcard buffering and the transducers.

Can be measured via `jack_iodelay`. It is used to compute `delay_roundtrip` and `delay_update` for computations in the backward path.

5.31.3.7 use_lpc_decorr `MHAParser::bool_t` `adaptive_feedback_canceller::use_lpc_↔
decorr`

Boolean defining whether decorrelation using LPC-filtering of microphone and loudspeaker signal should be performed.

NOTE: The algorithm did not yet implement the decorrelation via LPC coefficients. If you set this variable to 'true' in the current state, the plugin will not work.

5.31.3.8 lpc_order `MHAParser::int_t adaptive_feedback_canceller::lpc_order`

5.31.3.9 delay_forward_path `MHAParser::vint_t adaptive_feedback_canceller::delay_↔
_forward_path`

5.31.3.10 blocks_no_update `MHAParser::int_t adaptive_feedback_canceller::blocks_↔
_no_update`

5.31.3.11 debug_mode `MHAParser::bool_t adaptive_feedback_canceller::debug_mode`

debug_mode (p. 263) == true provides more variables in the AC-space that are useful for debugging, including `FBfilter_estim_ac`, `ERRsig_ac`, `current_power_ac`, `estim_err_ac`

5.31.3.12 patchbay `MHAEvents::patchbay_t< adaptive_feedback_canceller> adaptive_↔
_feedback_canceller::patchbay [private]`

The documentation for this class was generated from the following files:

- `adaptive_feedback_canceller.h`
- `adaptive_feedback_canceller.cpp`

5.32 adaptive_feedback_canceller_config Class Reference

This is the runtime configuration, the main processing will be done in this class.

Public Member Functions

- `adaptive_feedback_canceller_config (algo_comm_t &ac, const mhaconfig_t in_↔
cfg, adaptive_feedback_canceller *afc)`
- `~adaptive_feedback_canceller_config ()`
- `mha_wave_t * process (mha_wave_t *MICsig)`
*The `process()` (p. 266) method contains the actual AFC algorithm, the output is stored in `L_↔
Ssig_output`.*
- `void insert ()`
Insert all AC-variables into the AC-space.

Private Attributes

- const unsigned int **ntaps**
Length of the estimated filter.
- const unsigned int **frames**
Length of a block in samples (fragsize)
- const unsigned int **channels**
Number of channels.
- const int **n_no_update_**
Number of blocks after startup where the feedback filter is not updated.
- int **no_update_count**
*Index counting no-update-blocks up to n_no_update_ to check in **process()** (p. 266) whether a filter update shall be performed or not.*
- const **mha_real_t fragsize**
*Fragsize for computing **delay_roundtrip** (p. 269) and **delay_update** (p. 269), defaults to the MHA's fragsize.*
- const **mha_real_t stepsize**
Normalized stepsize of the NLMS-Algorithm.
- const **mha_real_t min_const**
Minimum constant to prevent division by zero in the NLMS-Algorithm.
- **MHASignal::waveform_t forward_sig**
Copy of error signal that is channeled into the forward path processing.
- **MHASignal::waveform_t LSsig_initializer**
*Signal consisting of zeros, it is only used to initialize the loudspeaker signal (LSsig) for the first iteration (before **forward_path_proc.process()** is called for the first time).*
- **mha_wave_t * LSsig**
Pointer to the loudspeaker (LS) signal.
- **MHASignal::waveform_t LSsig_output**
- **MHASignal::delay_t delay_forward_path**
Delay line for additional decorrelation in the forward path.
- **MHAParser::mhapuginloader_t & forward_path_proc**
Pluginloader to load the plugins that represent the hearing aid processing in the forward path.
- **MHASignal::delay_t delay_roundtrip**
*Delay line equal to the measured roundtrip latency - **fragsize** (p. 267).*
- **MHASignal::delay_t delay_update**
- std::vector< **MHAFilter::filter_t** > **FBfilter_estim**
- **MHA_AC::waveform_t FBfilter_estim_ac**
- **MHASignal::waveform_t FBsig_estim**
- **MHASignal::waveform_t ERRsig**
- **MHA_AC::waveform_t ERRsig_ac**
- bool **use_lpc_decorr**
- std::vector< **MHAFilter::filter_t** > **lpc_filter**
- **MHASignal::waveform_t white_LSsig**
Loudspeaker signal, whitened by filtering with LPC coefficients.
- **MHASignal::waveform_t white_LSsig_smpl**
*Single sample (for each channel) of white_LSsig that will be written to **rb_white_LSsig** next.*

- **MHASignal::ringbuffer_t rb_white_LSsig**

*Ringbuffer containing the values used to determine the power of **white_LSsig** (p. 270) in each channel (see **channels** (p. 266)) and update **Fbfilter_estim** (p. 269).*

- `std::vector< mha_real_t > current_power`
- **MHASignal::waveform_t white_MICsig**
- **MHASignal::waveform_t white_FBsig_estim**
- **MHASignal::waveform_t white_ERRsig**
- `bool debug_mode`

When executing the code for debug purposes this flag can be set to true in order to capture variable states and provide them as AC variables to the user.

- **MHA_AC::waveform_t current_power_ac**
- **MHA_AC::waveform_t estim_err_ac**

*AC-variable publishing the state of 'estim_err' if **debug_mode** (p. 271) == true 'estim_err' is a variable local to this plugin's **process()** (p. 266) method.*

5.32.1 Detailed Description

This is the runtime configuration, the main processing will be done in this class.

During runtime AC variables are published by this class, mainly for debugging purposes.

5.32.2 Constructor & Destructor Documentation

5.32.2.1 adaptive_feedback_canceller_config() adaptive_feedback_canceller_config←

```
::adaptive_feedback_canceller_config (
    algo_comm_t & ac,
    const mhaconfig_t in_cfg,
    adaptive_feedback_canceller * afc )
```

Parameters

<i>ac</i>	Algorithm communication variable space
<i>in_cfg</i>	MHA signal dimensions for this plugin
<i>adaptive_feedback_canceller</i> (p. 259)	Pointer to plugin interface instance, used to extract user configuration values.

5.32.2.2 ~adaptive_feedback_canceller_config() adaptive_feedback_canceller_←

```
config::~adaptive_feedback_canceller_config ( )
```

5.32.3 Member Function Documentation

5.32.3.1 process() `mha_wave_t * adaptive_feedback_canceller_config::process (mha_wave_t * MICsig)`

The **process()** (p. 266) method contains the actual AFC algorithm, the output is stored in `L←Ssig_output`.

Parameters

<i>MICsig</i>	The microphone signal which contains the target signal + the feedback signal. The input signal is not altered in place.
---------------	---

Returns

A pointer to `LSsig_output` which contains the loudspeaker signal that is actually channeled to the output.

5.32.3.2 insert() `void adaptive_feedback_canceller_config::insert ()`

Insert all AC-variables into the AC-space.

5.32.4 Member Data Documentation

5.32.4.1 ntaps `const unsigned int adaptive_feedback_canceller_config::ntaps [private]`

Length of the estimated filter.

5.32.4.2 frames `const unsigned int adaptive_feedback_canceller_config::frames [private]`

Length of a block in samples (fragsize)

5.32.4.3 channels `const unsigned int adaptive_feedback_canceller_config::channels`
[private]

Number of channels.

This plugin assumes that the number of input channels is equal to the number of output channels. Each input is paired with an output and one pair is called a channel. This is necessary because the AFC needs input and output information to work.

5.32.4.4 n_no_update_ `const int adaptive_feedback_canceller_config::n_no_update_`
_ [private]

Number of blocks after startup where the feedback filter is not updated.

5.32.4.5 no_update_count `int adaptive_feedback_canceller_config::no_update_count`
[private]

Index counting no-update-blocks up to `n_no_update_` to check in `process()` (p. 266) whether a filter update shall be performed or not.

5.32.4.6 fragsize `const mha_real_t adaptive_feedback_canceller_config::fragsize`
[private]

Fragsize for computing `delay_roundtrip` (p. 269) and `delay_update` (p. 269), defaults to the MHA's fragsize.

It is assumed that the soundcard's and the MHA's fragsize are equal. In special cases, the user can set this variable to an individual value.

5.32.4.7 stepsize `const mha_real_t adaptive_feedback_canceller_config::stepsize`
[private]

Normalized stepsize of the NLMS-Algorithm.

5.32.4.8 min_const `const mha_real_t adaptive_feedback_canceller_config::min_const [private]`

Minimum constant to prevent division by zero in the NLMS-Algorithm.

5.32.4.9 forward_sig `MHASignal::waveform_t adaptive_feedback_canceller_config←
::forward_sig [private]`

Copy of error signal that is channeled into the forward path processing.

5.32.4.10 LSsig_initializer `MHASignal::waveform_t adaptive_feedback_canceller←
config::LSsig_initializer [private]`

Signal consisting of zeros, it is only used to initialize the loudspeaker signal (LSsig) for the first iteration (before `forward_path_proc.process()` is called for the first time).

5.32.4.11 LSsig `mha_wave_t* adaptive_feedback_canceller_config::LSsig [private]`

Pointer to the loudspeaker (LS) signal.

The destination of this pointer will be altered by the plugin loaded by the pluginloader in the forward path processing.

5.32.4.12 LSsig_output `MHASignal::waveform_t adaptive_feedback_canceller_config←
::LSsig_output [private]`

5.32.4.13 delay_forward_path `MHASignal::delay_t adaptive_feedback_canceller←
config::delay_forward_path [private]`

Delay line for additional decorrelation in the forward path.

5.32.4.14 forward_path_proc `MHAParser::mhapluginloader_t& adaptive_feedback_canceller_config::forward_path_proc [private]`

Pluginloader to load the plugins that represent the hearing aid processing in the forward path.

5.32.4.15 delay_roundtrip `MHASignal::delay_t adaptive_feedback_canceller_config::delay_roundtrip [private]`

Delay line equal to the measured roundtrip latency - **fragsize** (p. 267).

The roundtrip latency describes the timespan between playing back and receiving the same signal, including delays induced by soundcard buffering and the transducers. Can be measured via `jack_iodelay`. It is used on the loudspeaker signal `LSSig` before the filtering with `FBfilter_estim`, to achieve about the same temporal alignment to `MICsig` as the alignment of the target signal and the true feedback signal.

5.32.4.16 delay_update `MHASignal::delay_t adaptive_feedback_canceller_config::delay_update [private]`

5.32.4.17 FBfilter_estim `std::vector< MHAFilter::filter_t> adaptive_feedback_canceller_config::FBfilter_estim [private]`

5.32.4.18 FBfilter_estim_ac `MHA_AC::waveform_t adaptive_feedback_canceller_config::FBfilter_estim_ac [private]`

5.32.4.19 FBsig_estim `MHASignal::waveform_t adaptive_feedback_canceller_config::FBsig_estim [private]`

5.32.4.20 ERRsig `MHASignal::waveform_t adaptive_feedback_canceller_config::ERRsig [private]`

5.32.4.21 ERRsig_ac `MHA_AC::waveform_t` `adaptive_feedback_canceller_config::ERRsig_ac` [private]

5.32.4.22 use_lpc_decorr `bool` `adaptive_feedback_canceller_config::use_lpc_decorr` [private]

5.32.4.23 lpc_filter `std::vector<MHAFilter::filter_t>` `adaptive_feedback_canceller_config::lpc_filter` [private]

5.32.4.24 white_LSsig `MHASignal::waveform_t` `adaptive_feedback_canceller_config::white_LSsig` [private]

Loudspeaker signal, whitened by filtering with LPC coefficients.

If `use_lpc_decorr` (p. 270) is false then this is just a copy of `LSsig` (p. 268) before the delays.

5.32.4.25 white_LSsig_smpl `MHASignal::waveform_t` `adaptive_feedback_canceller_config::white_LSsig_smpl` [private]

Single sample (for each channel) of `white_LSsig` that will be written to `rb_white_LSsig` next.

For the filter estimation we have to use a ringbuffer with the size of `filter_length` to buffer `white_LSsig` (p. 270). For each filter tap we have to update the buffer and it is only possible to update a ringbuffer with a whole `waveform_t`. That is why we have to use this single sample variable.

5.32.4.26 rb_white_LSsig `MHASignal::ringbuffer_t` `adaptive_feedback_canceller_config::rb_white_LSsig` [private]

Ringbuffer containing the values used to determine the power of `white_LSsig` (p. 270) in each channel (see `channels` (p. 266)) and update `FBfilter_estim` (p. 269).

The ringbuffer has a size equal to `filter_length`.

5.32.4.27 current_power `std::vector< mha_real_t>` adaptive_feedback_canceller_↔
config::current_power [private]

5.32.4.28 white_MICsig `MHASignal::waveform_t` adaptive_feedback_canceller_config_↔
::white_MICsig [private]

5.32.4.29 white_FBsig_estim `MHASignal::waveform_t` adaptive_feedback_canceller_↔
config::white_FBsig_estim [private]

5.32.4.30 white_ERRsig `MHASignal::waveform_t` adaptive_feedback_canceller_config_↔
::white_ERRsig [private]

5.32.4.31 debug_mode `bool` adaptive_feedback_canceller_config::debug_mode [private]

When executing the code for debug purposes this flag can be set to true in order to capture variable states and provide them as AC variables to the user.

The following variables are captured: **FBfilter_estim_ac** (p. 269), **ERRsig_ac** (p. 269), **current_power_ac** (p. 271), **estim_err_ac** (p. 271)

5.32.4.32 current_power_ac `MHA_AC::waveform_t` adaptive_feedback_canceller_↔
config::current_power_ac [private]

5.32.4.33 estim_err_ac `MHA_AC::waveform_t` adaptive_feedback_canceller_config_↔
::estim_err_ac [private]

AC-variable publishing the state of 'estim_err' if **debug_mode** (p. 271) == true 'estim_err' is a variable local to this plugin's **process()** (p. 266) method.

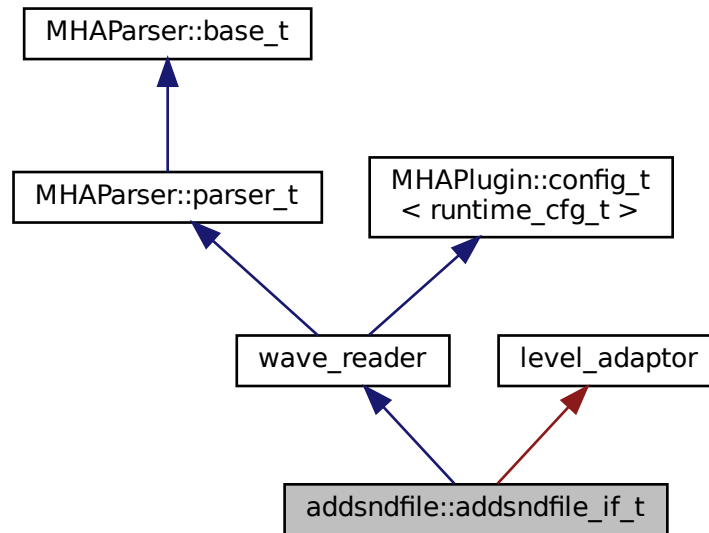

It represents a part of the NLMS equation, namely the **stepsize** (p. 267) normalized by **current_power** (p. 270) times **ERRsig** (p. 269).

The documentation for this class was generated from the following files:

- **adaptive_feedback_canceller.h**
- **adaptive_feedback_canceller.cpp**

5.35 addsndfile::resampled_soundfile_t Class Reference

Reads sound from file and resamples it if necessary and wanted.

Inheritance diagram for `addsndfile::resampled_soundfile_t`:

Public Member Functions

- `resampled_soundfile_t` (`const std::string &name`, `float mha_sampling_rate`, `addsndfile__resampling_mode_t resampling_mode`)
Reads sound from file and resamples if necessary and wanted.

Additional Inherited Members

5.35.1 Detailed Description

Reads sound from file and resamples it if necessary and wanted.

Sound data can then be used by `addsndfile`.

5.35.2 Constructor & Destructor Documentation

5.35.2.1 `resampled_soundfile_t()` `addsndfile::resampled_soundfile_t::resampled_↵`
`soundfile_t (`
`const std::string & name,`
`float mha_sampling_rate,`
`addsndfile_resampling_mode_t resampling_mode)`

Reads sound from file and resamples if necessary and wanted.

If the sound file does not specify a sampling rate, then the sound data is always used without resampling.

Parameters

<i>name</i>	Sound file name
<i>mha_sampling_rate</i>	The sampling rate of the MHA signal processing at the point of the <code>addsndfile</code> plugin
<i>resampling_mode</i>	DONT_RESAMPLE_STRICT: Do not resample, just use the samples from the sound file at the current sample rate, even if the sample rate of the sound file differs. DONT_RESAMPLE_PERMISSIVE: Do not resample, if the sample rate of the MHA differs from the sample rate of the sound file, raise an error. DO_RESAMPLE: Resample.

Exceptions

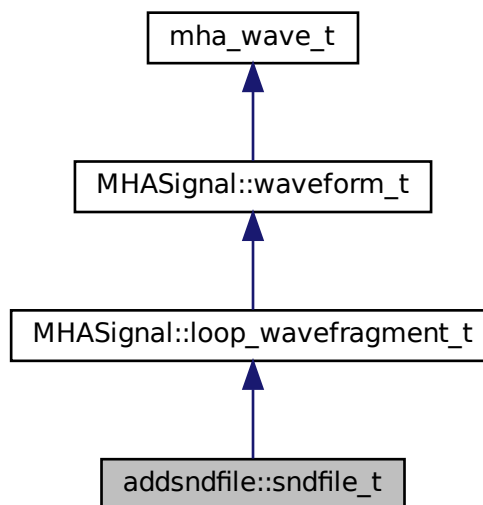

<i>MHA_Error</i> (p. 818)	If the sampling rate of the file does not match the sampling rate of the MHA and DONT_RESAMPLE_STRICT was requested. If resampling failed (e.g. due to non-rational quotient of MHA sampling rate and sound file sampling rate).

- F m_mu_beta
- F m_powerfilter_coeff
- F m_powerfilter_norm
- F m_powerfilter_state

5.38.1 Detailed Description

```
template<class F>
class ADM::ADM< F >
```

Adaptive differential microphone, working for speech frequency range.

5.38.2 Constructor & Destructor Documentation

```
5.38.2.1 ADM() template<class F >
ADM::ADM< F >:: ADM (
    F fs,
    F dist,
    unsigned lp_order,
    const F * lp_alphas,
    unsigned decomb_order,
    const F * decomb_alphas,
    F tau_beta = F(50e-3),
    F mu_beta = F(1e-4) )
```

Create Adaptive Differential Microphone.

Parameters

<i>fs</i>	Sampling rate / Hz
<i>dist</i>	Distance between physical microphones / m
<i>lp_order</i>	Filter order of FIR lowpass filter used for adaptation

Parameters

<i>lp_alphas</i>	Pointer to array of alpha coefficients for the lowpass filter used for adaptation. Since this class uses linear phase FIR filters only, only the first half ($\text{order}/2 + 1$) of the coefficients will be read (coefficients for linear-phase FIR filters are symmetric).
<i>decomb_order</i>	Filter order of FIR compensation filter (compensates for comb filter characteristic). $\text{decomb_order} \leq 1$ deactivates filter.
<i>decomb_alphas</i>	Pointer to array of alpha coefficients for the compensation filter used to compensate for the comb filter characteristic. Since this class uses linear phase FIR filters only, only the first half ($\text{order}/2 + 1$) of the coefficients will be read (coefficients for linear-phase FIR filters are symmetric).
<i>tau_beta</i>	Time constant of the lowpass filter used for averaging the power of the output signal
<i>mu_beta</i>	adaptation speed

5.38.3 Member Function Documentation

5.38.3.1 `process()` `template<class F >`

```
F ADM::ADM< F >::process (
    const F & front,
    const F & back,
    const F & external_beta = F(-1),
    bool update_beta = true ) [inline]
```

ADM (p. 283) processes one frame.

Parameters

<i>front</i>	The current front input signal sample
<i>back</i>	The current rear input signal sample
<i>external_beta</i>	If ≥ 0 , this is used as the "beta" parameter for direction to filter out. Else, the beta parameter is adapted to filtered out a direction so that best reduction of signal intensity from the back hemisphere is achieved.
<i>update_beta</i>	Perform the beta adaptation step?

Returns

The computed output sample

5.38.3.2 beta() `template<class F >`

5.39 ADM::Delay< F > Class Template Reference

A delay-line class.

Public Member Functions

- **Delay** (F samples, F f_design, F fs)
Create a signal delay object.
- **~Delay** ()
- F **process** (const F &in_sample)
Apply delay to signal.

Private Attributes

- unsigned **m_fullsamples**
Integer part of delay.
- F **m_coeff**
coefficient for 1st order IIR lowpass filter which does the subsample delay
- F **m_norm**
normalization for the IIR subsample delay filter
- F * **m_state**
Ringbuffer: Delayline.
- unsigned **m_now_in**
current position for inserting new samples into m_state ringbuffer

5.39.1 Detailed Description

```
template<class F>
class ADM::Delay< F >
```

A delay-line class.

It can delay samples in a single audio channel. It stores samples while they are delayed until they have reached their target delay. It can also do subsample-delays for a limited frequency range below $fs/4$.

5.39.2 Constructor & Destructor Documentation

```
5.39.2.1 Delay() template<class F >
ADM::Delay< F >:: Delay (
    F samples,
    F f_design,
    F fs )
```

Create a signal delay object.

Parameters

<i>samples</i>	number of samples to delay (may be non-integer)
<i>f_design</i>	design frequency (in Hz). Subsampledelay is exact for this frequency and approximate for different frequencies
<i>fs</i>	sampling frequency (in Hz).

5.39.2.2 ~Delay() `template<class F >`
`ADM::Delay< F >::~~ Delay`

5.39.3 Member Function Documentation

5.39.3.1 process() `template<class F >`
`F ADM::Delay< F >::process (`
`const F & in_sample) [inline]`

Apply delay to signal.

Whenever a new audio sample enters the delay line, a previous audio sample, now delayed, is returned by this method. Sub-sample-delays are implemented by applying a first-order recursive lowpass filter. This method needs to be called repeatedly, once for each incoming audio sample in correct order for a block of audio with multiple samples (oldest first, newest last).

Parameters

<code><i>in_sample</i></code>	The current input signal sample
-------------------------------	---------------------------------

Returns

The output sample, which is one of the previously received input samples except for the sub-sample delay.

5.39.4 Member Data Documentation

5.39.4.1 m_fullsamples `template<class F >`
`unsigned ADM::Delay< F >::m_fullsamples [private]`

Integer part of delay.

5.39.4.2 m_coeff `template<class F >`
`F ADM::Delay< F >::m_coeff [private]`

coefficient for 1st order IIR lowpass filter which does the subsample delay

5.39.4.3 m_norm `template<class F >`
`F ADM::Delay< F >::m_norm [private]`

normalization for the IIR subsample delay filter

5.39.4.4 m_state `template<class F >`
`F* ADM::Delay< F >::m_state [private]`

Ringbuffer: Delayline.

5.39.4.5 m_now_in `template<class F >`
`unsigned ADM::Delay< F >::m_now_in [private]`

current position for inserting new samples into m_state ringbuffer

The documentation for this class was generated from the following file:

- **adm.hh**

5.40 ADM::Linearphase_FIR< F > Class Template Reference

An efficient linear-phase fir filter implementation.

Public Member Functions

- **Linearphase_FIR** (unsigned order, const F *alphas)
Create linear-phase FIR filter.
- **~Linearphase_FIR** ()
- **F process** (const F &in_sample)
Filter one sample with this linear-phase FIR filter.

Private Attributes

- unsigned **m_order**
The filter order of this linear-phase FIR filter.
- F * **m_alphas**
FIR filter coefficients.
- F * **m_output**
Ringbuffer for building future output.
- unsigned **m_now**
current start of ringbuffer

5.40.1 Detailed Description

```
template<class F>
class ADM::Linearphase_FIR< F >
```

An efficient linear-phase fir filter implementation.

5.40.2 Constructor & Destructor Documentation

5.40.2.1 Linearphase_FIR() `template<class F >`
ADM::Linearphase_FIR< F >:: Linearphase_FIR (
 unsigned *order*,
 const F * *alphas*)

Create linear-phase FIR filter.

Parameters

<i>order</i>	filter order of this FIR filter. restriction: must be even.
<i>alphas</i>	pointer to Array of alpha coefficients. Since this class is for linear phase FIR filters only, only (order / 2 + 1) coefficients will be read. (Coefficients for linear-phase FIR filters are symmetric.)

5.40.2.2 ~Linearphase_FIR() `template<class F >`
ADM::Linearphase_FIR< F >::~~ Linearphase_FIR

5.40.3 Member Function Documentation

5.40.3.1 process() `template<class F >`
`F ADM::Linearphase_FIR< F >::process (`
`const F & in_sample) [inline]`

Filter one sample with this linear-phase FIR filter.

Parameters

<i>in_sample</i>	the current input sample
------------------	--------------------------

Returns

the computed output sample

5.40.4 Member Data Documentation

5.40.4.1 m_order `template<class F >`
`unsigned ADM::Linearphase_FIR< F >::m_order [private]`

The filter order of this linear-phase FIR filter.

5.40.4.2 m_alphas `template<class F >`
`F* ADM::Linearphase_FIR< F >::m_alphas [private]`

FIR filter coefficients.

Only $m_order / 2 + 1$ coefficients need to be stored since coefficients of linear-phase FIR filters are symmetric

5.40.4.3 m_output `template<class F >`
`F* ADM::Linearphase_FIR< F >::m_output [private]`

Ringbuffer for building future output.

5.40.4.4 m_now `template<class F >`

```
unsigned ADM::Linearphase_FIR< F >::m_now [private]
```

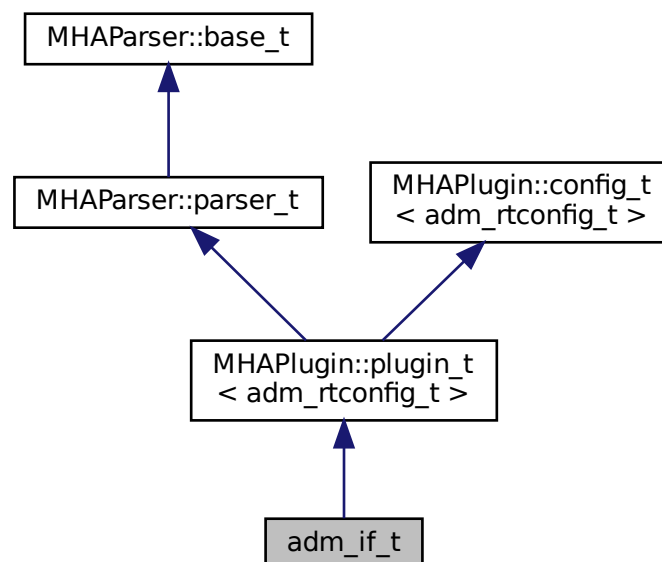

current start of ringbuffer

5.43 `alsa_base_t` Class Reference

Inheritance diagram for `alsa_base_t`:

Public Member Functions

- **alsa_base_t** ()
- virtual **~alsa_base_t** ()=default
- virtual void **start** ()=0
start puts alsa device in usable state
- virtual void **stop** ()=0
stop informs alsa device that we do not need any more samples / will not provide any more samples
- virtual bool **read** (**mha_wave_t** **)=0
*read audio samples from the device into an internal **mha_wave_t** (p. 894) buffer, then update the pointer given as parameter to point to the internal structure.*
- virtual bool **write** (**mha_wave_t** *)=0
write audio samples from the given waveform buffer to the sound device.

Public Attributes

- **snd_pcm_t** * **pcm**
The underlying alsa handle to this sound card.

5.43.1 Constructor & Destructor Documentation

5.43.1.1 **alsa_base_t()** `alsa_base_t::alsa_base_t () [inline]`

5.43.1.2 **~alsa_base_t()** `virtual alsa_base_t::~~alsa_base_t () [virtual], [default]`

5.43.2 Member Function Documentation

5.43.2.1 **start()** `virtual void alsa_base_t::start () [pure virtual]`

start puts alsa device in usable state

Implemented in **alsa_t**< **T** > (p. 308).

5.43.2.2 stop() `virtual void alsa_base_t::stop () [pure virtual]`

stop informs alsa device that we do not need any more samples / will not provide any more samples

Implemented in `alsa_t< T >` (p. 308).

5.43.2.3 read() `virtual bool alsa_base_t::read (mha_wave_t **) [pure virtual]`

read audio samples from the device into an internal `mha_wave_t` (p. 894) buffer, then update the pointer given as parameter to point to the internal structure.

Converts sound samples from the integer data type provided by the sound card to floating-point values needed by the MHA in the range [-1.0,1.0]

Implemented in `alsa_t< T >` (p. 308).

5.43.2.4 write() `virtual bool alsa_base_t::write (mha_wave_t *) [pure virtual]`

write audio samples from the given waveform buffer to the sound device.

converts the floating point values coming from the MHA to the integer samples required by the sound card.

Implemented in `alsa_t< T >` (p. 308).

5.43.3 Member Data Documentation

5.43.3.1 pcm `snd_pcm_t* alsa_base_t::pcm`

The underlying alsa handle to this sound card.

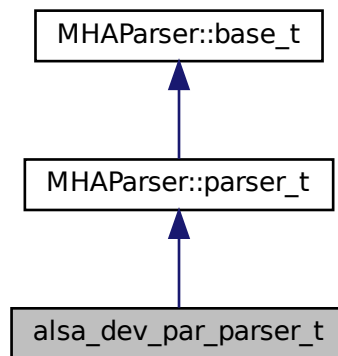

The documentation for this class was generated from the following file:

- `MHAIOalsa.cpp`

5.44 `alsa_dev_par_parser_t` Class Reference

Parser variables corresponding to one alsa device.

Inheritance diagram for `alsa_dev_par_parser_t`:

Public Member Functions

- `alsa_dev_par_parser_t` (`snd_pcm_stream_t` **stream_dir**)
Constructor inserts the parser variables into this sub-parser.

Public Attributes

- `MHAParser::string_t` **device**
Name of the device in the alsa world, like "hw:0.0", "default", etc.
- `MHAParser::int_t` **nperiods**
Number of buffers of fragsize to hold in the alsa buffer.
- `snd_pcm_stream_t` **stream_dir**
Remember the direction (capture/playback) of this device.

Additional Inherited Members

5.44.1 Detailed Description

Parser variables corresponding to one alsa device.

ALSA separates audio capture and audio playback into two different devices that have to be opened separately. This class encapsulates the parser variables that pertain to one such direction.

5.44.2 Constructor & Destructor Documentation

5.44.2.1 `alsa_dev_par_parser_t()` `alsa_dev_par_parser_t::alsa_dev_par_parser_t (` `snd_pcm_stream_t stream_dir)`

Constructor inserts the parser variables into this sub-parser.

Parameters

<code>stream_dir</code>	capture or playback
-------------------------	---------------------

5.44.3 Member Data Documentation

5.44.3.1 `device` `MHAParser::string_t` `alsa_dev_par_parser_t::device`

Name of the device in the alsa world, like "hw:0.0", "default", etc.

5.44.3.2 `nperiods` `MHAParser::int_t` `alsa_dev_par_parser_t::nperiods`

Number of buffers of fragsize to hold in the alsa buffer.

Usually 2, the minimum possible.

5.44.3.3 `stream_dir` `snd_pcm_stream_t` `alsa_dev_par_parser_t::stream_dir`

Remember the direction (capture/playback) of this device.

The documentation for this class was generated from the following file:

5.45 `alsa_t< T >` Class Template Reference

Our representation of one alsa device.

Inheritance diagram for `alsa_t< T >`:

Public Member Functions

- **alsa_t** (const **alsa_dev_par_parser_t** &par, unsigned int rate, unsigned int **fragsize**, unsigned int **channels**)
Constructor receives the parameters for this device.
- **~alsa_t** ()
Destructor closes the sound device.
- void **start** () override
start puts alsa device in usable state
- void **stop** () override
stop informs alsa device that we do not need any more samples / will not provide any more samples
- bool **read** (**mha_wave_t** **) override
*read audio samples from the device into an internal **mha_wave_t** (p. 894) buffer, then update the pointer given as parameter to point to the internal structure.*
- bool **write** (**mha_wave_t** *) override
write audio samples from the given waveform buffer to the sound device.

Private Attributes

- unsigned int **channels**
- unsigned int **fragsize**
- T * **buffer**
- std::vector< **mha_real_t** > **frame_data**
- **MHASignal::waveform_t** **wave**
internal buffer to store sound samples coming from the sound card.
- const **mha_real_t** **gain**
- const **mha_real_t** **invgain**
- snd_pcm_format_t **pcm_format**

Additional Inherited Members

5.45.1 Detailed Description

```
template<typename T>
class alsa_t< T >
```

Our representation of one alsa device.

We can start and stop the device, and depending on the direction, read or write samples.

5.45.2 Constructor & Destructor Documentation

```
5.45.2.1 alsa_t() template<typename T >
alsa_t< T >:: alsa_t (
    const alsa_dev_par_parser_t & par,
    unsigned int rate,
    unsigned int fragsize,
    unsigned int channels )
```

Constructor receives the parameters for this device.

It opens the sound device using the alsa library and selects the given parameters, but does not yet start the sound device to perform real I/O.

Parameters

<i>par</i>	our parser variable aggregator (containing direction, device name, and number of periods to place in alsa buffer)
<i>rate</i>	sampling rate in Hz
<i>fragsize</i>	samples per block per channel
<i>channels</i>	number of audio channels to open

```
5.45.2.2 ~alsa_t() template<typename T >
alsa_t< T >::~~ alsa_t
```

Destructor closes the sound device.

5.45.3 Member Function Documentation

5.45.3.1 start() `template<typename T >`
`void alsa_t< T >::start [override], [virtual]`

start puts alsa device in usable state

Implements **alsa_base_t** (p. 302).

5.45.3.2 stop() `template<typename T >`
`void alsa_t< T >::stop [override], [virtual]`

stop informs alsa device that we do not need any more samples / will not provide any more samples

Implements **alsa_base_t** (p. 302).

5.45.3.3 read() `template<typename T >`
`bool alsa_t< T >::read (`
`mha_wave_t ** s) [override], [virtual]`

read audio samples from the device into an internal **mha_wave_t** (p. 894) buffer, then update the pointer given as parameter to point to the internal structure.

Converts sound samples from the integer data type provided by the sound card to floating-point values needed by the MHA in the range [-1.0,1.0]

Implements **alsa_base_t** (p. 303).

5.45.3.4 write() `template<typename T >`
`bool alsa_t< T >::write (`
`mha_wave_t * s) [override], [virtual]`

write audio samples from the given waveform buffer to the sound device.

converts the floating point values coming from the MHA to the integer samples required by the sound card.

Implements **alsa_base_t** (p. 303).

5.45.4 Member Data Documentation

5.45.4.1 channels `template<typename T >`
`unsigned int alsa_t< T >::channels [private]`

5.45.4.2 fragsize `template<typename T >`
`unsigned int alsa_t< T >::fragsize [private]`

5.45.4.3 buffer `template<typename T >`
`T* alsa_t< T >::buffer [private]`

5.45.4.4 frame_data `template<typename T >`
`std::vector< mha_real_t> alsa_t< T >::frame_data [private]`

5.45.4.5 wave `template<typename T >`
`MHASignal::waveform_t alsa_t< T >::wave [private]`

internal buffer to store sound samples coming from the sound card.

5.45.4.6 gain `template<typename T >`
`const mha_real_t alsa_t< T >::gain [private]`

5.45.4.7 invgain `template<typename T >`
`const mha_real_t alsa_t< T >::invgain [private]`

```
5.45.4.8 pcm_format  template<typename T >
snd_pcm_format_t  alsact::pcm_format [private]
```

5.46 altconfig_t Class Reference

Single class implementing plugin altconfig.

Inheritance diagram for altconfig_t:

Public Member Functions

- **altconfig_t** (**MHA_AC::algo_comm_t** &iac, const std::string &configured_name)

Constructor initializes an instance of the altconfig plugin.
- void **prepare** (**mhaconfig_t** &cf)

Invoked by MHA when this plugin should prepare for signal processing.
- void **release** ()

Invoked by MHA when this plugin should call its release function.

Private Member Functions

- void **on_set_algos** ()
Callback executed when the configuration variable "algos" is written to at run time.
- void **on_set_select** ()
Callback executed when the configuration variable "select" is successfully written to at run time.
- void **event_select_all** ()
Callback executed when the configuration variable "selectall" is written to at run time.
- std::map< std::string, **MHAParser::string_t** > **save_state** ()
Save the old state of the user-defined sub-parsers for eventual restoration later.
- void **restore_state** (std::map< std::string, **MHAParser::string_t** > &state, std::map< std::string, **MHAParser::string_t** > &failed_state)
Restore the old parser state from a saved state.

Private Attributes

- **MHAParser::vstring_t** **parser_algos**
- **MHAParser::kw_t** **select_plug**
- **MHAParser::bool_t** **selectall**
- std::map< std::string, **MHAParser::string_t** > **configs**
Storage for alternative configuration commands.
- **MHAEvents::patchbay_t**< **altconfig_t** > **patchbay**
Configuration event broker.

Additional Inherited Members

5.46.1 Detailed Description

Single class implementing plugin altconfig.

altconfig loads another plugin and can send configuration commands to that plugin. altconfig does not need a separate runtime configuration class, template parameter char is used as a placeholder. Uses parser variable names "algos" and "select" even though the alternatives that can be selected in this plugin are not algorithms or plugins but configuration commands in order to be interface-compatible with plugin altplugs. mhacontrol has a UI area that automatically fills with the alternatives found in either altplugs or altconfig if the complete MHA loads exactly one plugin with this interface.

5.46.2 Constructor & Destructor Documentation

5.46.2.1 altconfig_t() altconfig_t::altconfig_t (
 MHA_AC::algo_comm_t & iac,
 const std::string & configured_name)

Constructor initializes an instance of the altconfig plugin.

Parameters

<i>iac</i>	Algorithm communication variable space, not used by this plugin except to initialize base class.
<i>configured_name</i>	Configured name of this plugin.

5.46.3 Member Function Documentation
5.46.3.1 prepare() `void altconfig_t::prepare (mhaconfig_t & cf) [inline], [virtual]`

Invoked by MHA when this plugin should prepare for signal processing.

altconfig delegates to the loaded plugin and does not need to do more work to prepare.

Parameters

<i>cf</i>	signal dimensions, forwarded to loaded plugin which may change the signal dimensions.
-----------	---

Implements **MHAPlugin::plugin_t< char >** (p. 1201).

5.46.3.2 release() `void altconfig_t::release () [inline], [virtual]`

Invoked by MHA when this plugin should call its release function.

altconfig delegates to the loaded plugin.

Reimplemented from **MHAPlugin::plugin_t< char >** (p. 1202).

5.46.3.3 on_set_algos() `void altconfig_t::on_set_algos () [private]`

Callback executed when the configuration variable "algos" is written to at run time.

Adds the configuration variables that store the alternative configuration commands based on the new names and sets the allowed values of configuration variable "select"

5.46.3.4 on_set_select() `void altconfig_t::on_set_select () [private]`

Callback executed when the configuration variable "select" is successfully written to at run time.

Causes the execution of the stored command for the selected condition in the context of the loaded plugin.

5.46.3.5 event_select_all() `void altconfig_t::event_select_all () [private]`

Callback executed when the configuration variable "selectall" is written to at run time.

When set to yes, iterates once through all stored configurations in the order they appear in configuration variable algos.

5.46.3.6 save_state() `std::map< std::string, MHAParser::string_t > altconfig_t↔
::save_state () [private]`

Save the old state of the user-defined sub-parsers for eventual restoration later.

operator= does not suffice to store/restore the old state because we need to re-insert the string_t's that were removed, but a copy of the string_t keeps a pointer to its parent and complains if we try to insert_item it again. So we just copy the relevant data into a new string_t.

Parameters

<i>old_state</i>	old parser state
------------------	------------------

Returns

Copy of the old state

5.46.3.7 restore_state() `void altconfig_t::restore_state (
std::map< std::string, MHAParser::string_t > & state,
std::map< std::string, MHAParser::string_t > & failed_state) [private]`

Restore the old parser state from a saved state.

Parameters

<i>state</i>	old parser state
--------------	------------------

5.46.4 Member Data Documentation

5.46.4.1 parser_algos `MHAParser::vstring_t altconfig_t::parser_algos [private]`

5.46.4.2 select_plug `MHAParser::kw_t altconfig_t::select_plug [private]`

5.46.4.3 selectall `MHAParser::bool_t altconfig_t::selectall [private]`

5.46.4.4 configs `std::map<std::string, MHAParser::string_t> altconfig_t::configs [private]`

Storage for alternative configuration commands.

New entries are registered with the plugin's parser when `parser_algos` is updated.

5.46.4.5 patchbay `MHAEvents::patchbay_t< altconfig_t> altconfig_t::patchbay [private]`

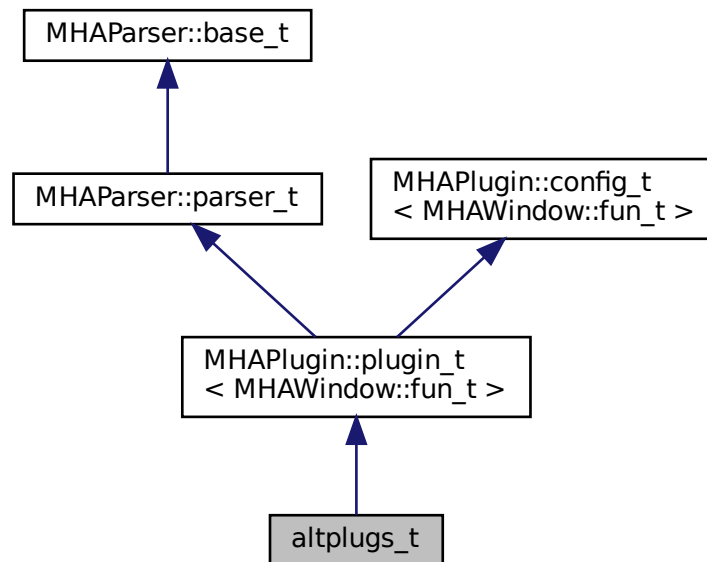

Configuration event broker.

The documentation for this class was generated from the following files:

- `altconfig.hh`
- `altconfig.cpp`

5.47 altplugs_t Class Reference

5.56 AuditoryProfile::fmap_t Class Reference

A class to store frequency dependent data (e.g., HTL and UCL).

Inherits `map< mha_real_t, mha_real_t >`.

Public Member Functions

- `std::vector< mha_real_t > get_frequencies () const`
 Return configured frequencies.
- `std::vector< mha_real_t > get_values () const`
 Return stored values corresponding to the frequencies.
- `bool isempty () const`

5.56.1 Detailed Description

A class to store frequency dependent data (e.g., HTL and UCL).

5.56.2 Member Function Documentation

5.56.2.1 get_frequencies() `std::vector< mha_real_t > AuditoryProfile::fmap_t::get_frequencies () const`

Return configured frequencies.

5.56.2.2 get_values() `std::vector< mha_real_t > AuditoryProfile::fmap_t::get_values () const`

Return stored values corresponding to the frequencies.

5.56.2.3 isempty() `bool AuditoryProfile::fmap_t::isempty () const [inline]`

The documentation for this class was generated from the following files:

- **auditory_profile.h**

5.60 AuditoryProfile::profile_t Class Reference

The Auditory Profile class.

Classes

- class **ear_t**
Class for ear-dependent parameters, e.g., audiograms or unilateral loudness scaling.

Public Member Functions

- **AuditoryProfile::profile_t::ear_t get_ear** (unsigned int channel) const
Return ear information of channel number.

Public Attributes

- **AuditoryProfile::profile_t::ear_t L**
Left ear data.
- **AuditoryProfile::profile_t::ear_t R**
Right ear data.

5.60.1 Detailed Description

The Auditory Profile class.

See definition of auditory profile

Currently only the audiogram data is stored.

5.60.2 Member Function Documentation

5.60.2.1 get_ear() `AuditoryProfile::profile_t::ear_t AuditoryProfile::profile_t::get_ear (unsigned int channel) const [inline]`

Return ear information of channel number.

5.60.3 Member Data Documentation

5.60.3.1 L `AuditoryProfile::profile_t::ear_t` `AuditoryProfile::profile_t::L`

Left ear data.

5.60.3.2 R `AuditoryProfile::profile_t::ear_t` `AuditoryProfile::profile_t::R`

Right ear data.

The documentation for this class was generated from the following file:

- `auditory_profile.h`

5.61 AuditoryProfile::profile_t::ear_t Class Reference

Class for ear-dependent parameters, e.g., audiograms or unilateral loudness scaling.

Public Member Functions

- void `convert_empty2normal` ()

Public Attributes

- `AuditoryProfile::fmap_t` HTL
- `AuditoryProfile::fmap_t` UCL

5.61.1 Detailed Description

Class for ear-dependent parameters, e.g., audiograms or unilateral loudness scaling.

5.61.2 Member Function Documentation

5.61.2.1 convert_empty2normal() void AuditoryProfile::profile_t::ear_t::convert←
_empty2normal ()

5.61.3 Member Data Documentation

5.61.3.1 HTL AuditoryProfile::fmap_t AuditoryProfile::profile_t::ear_t::HTL

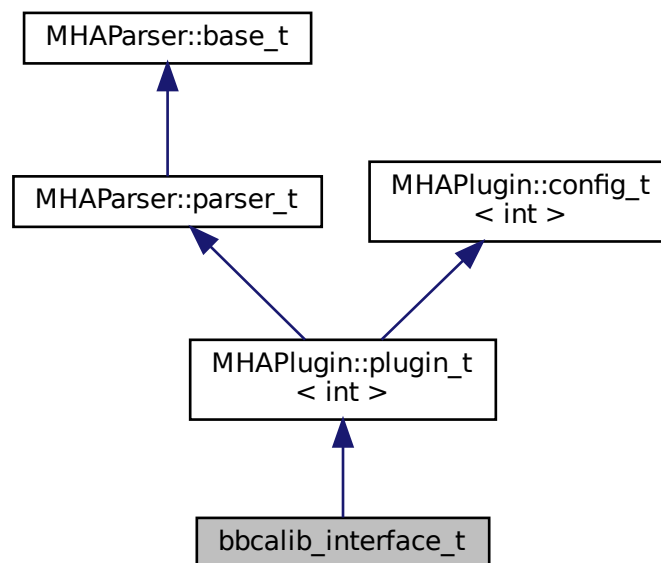

5.61.3.2 UCL AuditoryProfile::fmap_t AuditoryProfile::profile_t::ear_t::UCL

The documentation for this class was generated from the following files:

- auditory_profile.h
- auditory_profile.cpp

5.62 bbcalib_interface_t Class Reference

Inheritance diagram for bbcalib_interface_t:

Public Member Functions

- `bbcalib_interface_t (MHA_AC::algo_comm_t &iac, const std::string &configured_name)`

5.73 cpuload::cpuload_cfg_t Class Reference

Public Member Functions

- `cpuload_cfg_t (mha_real_t factor_, size_t table_size_, bool use_sine_)`
Ctor of the runtime configuration class.
- void `process` (unsigned fac_)
Process callback. Does not actually change signal.

Private Member Functions

- void `calc_sine` ()
- void `write_to_table` ()

Private Attributes

- float `phase` =0
Phase of the sine.
- volatile float `result` =0
Result of sin(phase). Volatile to prevent compiler from optimizing away the calculation.
- bool `use_sine` =false
Use sine or do table operation.
- float `factor` =0
cpu load factor. Values > 1 increase cpu load, values < 1 decrease it
- `std::vector< float >` `table`
Table with arbitrary values to operate on. Unused if use_sine=true.

5.73.1 Constructor & Destructor Documentation

5.73.1.1 cpuload_cfg_t() `cpuload::cpuload_cfg_t::cpuload_cfg_t (mha_real_t factor_, size_t table_size_, bool use_sine_)`

Ctor of the runtime configuration class.

Parameters

<i>factor_</i>	cpu load factor. Values > 1 increase cpu load, values < 1 decrease it
<i>table_↔</i> <i>size_</i>	
<i>use_sine↔</i> _	

5.73.2 Member Function Documentation

5.73.2.1 process() void cpuload::cpuload_cfg_t::process (unsigned *fac_*)

Process callback. Does not actually change signal.

5.73.2.2 calc_sine() void cpuload::cpuload_cfg_t::calc_sine () [private]

5.73.2.3 write_to_table() void cpuload::cpuload_cfg_t::write_to_table () [private]

5.73.3 Member Data Documentation

5.73.3.1 phase float cpuload::cpuload_cfg_t::phase =0 [private]

Phase of the sine.

5.73.3.2 result `volatile float cpuload::cpuload_cfg_t::result =0 [private]`

Result of $\sin(\text{phase})$. Volatile to prevent compiler from optimizing away the calculation.

5.73.3.3 use_sine `bool cpuload::cpuload_cfg_t::use_sine =false [private]`

Use sine or do table operation.

5.73.3.4 factor `float cpuload::cpuload_cfg_t::factor =0 [private]`

cpu load factor. Values > 1 increase cpu load, values < 1 decrease it

5.73.3.5 table `std::vector<float> cpuload::cpuload_cfg_t::table [private]`

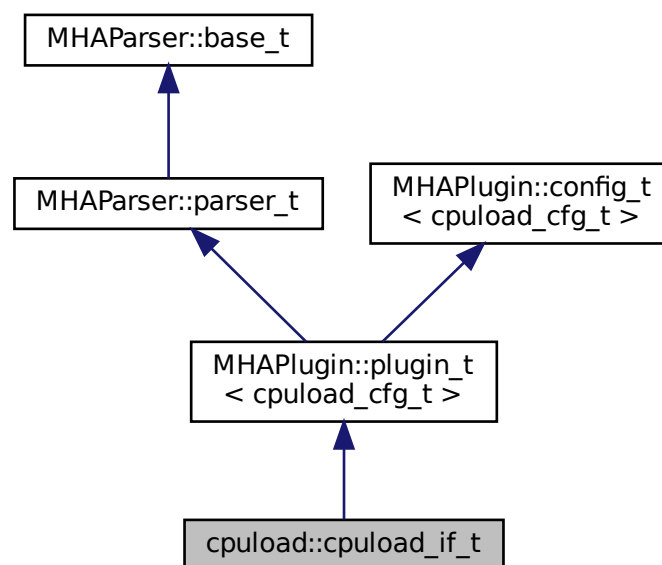

Table with arbitrary values to operate on. Unused if `use_sine=true`.

5.80 dc::dc_if_t Class Reference

Plugin interface class of the dynamic compression plugin `dc`.

Inheritance diagram for `dc::dc_if_t`:

Public Member Functions

- **dc_if_t** (**MHA_AC::algo_comm_t** &iac, const std::string &configured_name)
Standard MHA plugin constructor.
- void **prepare** (**mhaconfig_t** &tf)
Prepare plugin for signal processing.
- void **release** ()
Release plugin from signal processing.
- **mha_wave_t** * **process** (**mha_wave_t** *s_in)
Process method extracts band-specific input levels using the rmslevel, attack and decay filters on each input sample, looks up the gains and applies them to each sample of the signal in place.
- **mha_spec_t** * **process** (**mha_spec_t** *s_in)
Process method extracts band-specific input levels using the attack and decay filters on the latest STFT spectrum, looks up the gains and applies them in place.

Private Member Functions

- void **update_monitors** ()
Called from within the processing routines: updates the monitor variables.
- void **update** ()
Called by MHA configuration change event mechanism: creates new runtime configuration.

Private Attributes

- std::string **algo**
Configured name of this plugin, used as prefix for names of published AC variables.
- **MHAEvents::patchbay_t** < **dc_if_t** > **patchbay**
Connects configuration events to callbacks.
- unsigned **broadband_audiochannels** = {0U}
Number of broadband audio channels (before the filterbank).
- unsigned **bands_per_channel** = {0U}
Number of frequency bands per broadband audio channel.
- std::string **cf_name**
Name of AC variable containing the filterbank centre frequencies in Hz.
- std::string **ef_name**
Name of AC variable containing the filterbank edge frequencies in Hz.
- std::string **bw_name**
Name of the AC variable containing the filterbank band weights.

5.80.1 Detailed Description

Plugin interface class of the dynamic compression plugin `dc`.

5.80.2 Constructor & Destructor Documentation

5.80.2.1 dc_if_t() `dc_if_t::dc_if_t (`
 `MHA_AC::algo_comm_t & iac,`
 `const std::string & configured_name)`

Standard MHA plugin constructor.

Parameters

<i>iac</i>	Algorithm communication variable space.
<i>configured_name</i>	The name given to this plugin by the configuration.

5.80.3 Member Function Documentation

5.80.3.1 prepare() `void dc_if_t::prepare (mhaconfig_t & tf) [virtual]`

Prepare plugin for signal processing.

Parameters

<i>tf</i>	Input signal dimensions. They are not modified.
-----------	---

Implements **MHAPlugin::plugin_t< dc_t >** (p. 1201).

5.80.3.2 release() `void dc_if_t::release () [virtual]`

Release plugin from signal processing.

Reimplemented from **MHAPlugin::plugin_t< dc_t >** (p. 1202).

5.80.3.3 process() [1/2] `mha_wave_t * dc_if_t::process (mha_wave_t * s_in)`

Process method extracts band-specific input levels using the rmslevel, attack and decay filters on each input sample, looks up the gains and applies them to each sample of the signal in place.

Parameters

s_{in}	Latest block of time-domain input signal.
----------	---

Returns

s_{in} after modifying the signal in place.

5.80.3.4 process() [2/2] `mha_spec_t * dc_if_t::process (mha_spec_t * s_in)`

Process method extracts band-specific input levels using the attack and decay filters on the latest STFT spectrum, looks up the gains and applies them in place.

Parameters

s_{in}	Latest spectrum of the STFT input signal.
----------	---

Returns

s_{in} after modifying the signal in place.

5.80.3.5 update_monitors() `void dc_if_t::update_monitors () [private]`

Called from within the processing routines: updates the monitor variables.

5.80.3.6 update() `void dc_if_t::update () [private]`

Called by MHA configuration change event mechanism: creates new runtime configuration.

5.80.4 Member Data Documentation

5.80.4.1 algo `std::string dc::dc_if_t::algo [private]`

Configured name of this plugin, used as prefix for names of published AC variables.

5.80.4.2 patchbay `MHAEvents::patchbay_t< dc_if_t> dc::dc_if_t::patchbay [private]`

Connects configuration events to callbacks.

5.80.4.3 broadband_audiochannels `unsigned dc::dc_if_t::broadband_audiochannels = {0U} [private]`

Number of broadband audio channels (before the filterbank).

This value is filled in during **prepare()** (p. 395).

5.80.4.4 bands_per_channel `unsigned dc::dc_if_t::bands_per_channel = {0U} [private]`

Number of frequency bands per broadband audio channel.

Initialized during **prepare()** (p. 395).

5.80.4.5 cf_name `std::string dc::dc_if_t::cf_name [private]`

Name of AC variable containing the filterbank centre frequencies in Hz.

Initialized during **prepare()** (p. 395).

5.80.4.6 ef_name `std::string dc::dc_if_t::ef_name [private]`

Name of AC variable containing the filterbank edge frequencies in Hz.

Initialized during **prepare()** (p. 395).

5.80.4.7 bw_name `std::string dc::dc_if_t::bw_name [private]`

Name of the AC variable containing the filterbank band weights.

Initialized during **prepare()** (p. 395).

The documentation for this class was generated from the following files:

- **dc.hh**
- **dc.cpp**

5.81 dc::dc_t Class Reference

Runtime configuration class of dynamic compression plugin `dc`.

Matrix of latest input levels before attack/decay filter.
- **MHA_AC::waveform_t** **level_in_db_adjusted**
Matrix of latest input levels after attack/decay filter.
- unsigned int **fftl**
FFT length in samples, required for computing levels correctly.

Additional Inherited Members

5.81.1 Detailed Description

Runtime configuration class of dynamic compression plugin dc.

5.81.2 Constructor & Destructor Documentation

```

5.81.2.1 dc_t() dc::dc_t::dc_t (
    dc_vars_t vars,
    mha_real_t filter_rate,
    unsigned int nch_,
    MHA_AC::algo_comm_t & ac,
    mha_domain_t domain,
    unsigned int fftlen,
    unsigned int naudiochannels_,
    const std::string & configured_name,
    const std::vector< mha_real_t > & rmslevel_state = {},
    const std::vector< mha_real_t > & attack_state = {},
    const std::vector< mha_real_t > & decay_state = {} )

```

Constructor.

Parameters

<i>vars</i>	A copy of all configuration language variables of <i>dc</i> .
<i>filter_rate</i>	The rate in Hz with which the level filters of plugin <i>dc</i> are called. For waveform processing this is equal to the audio sampling rate. For spectral processing, this is equal to the audio block rate.
<i>nch_</i>	Total number of compression bands: bands x channels.
<i>ac</i>	Algorithm communication variable space. The constructor will not interact with it.
<i>domain</i>	MHA_WAVEFORM or MHA_SPECTRUM.
<i>fftlen</i>	FFT length used for STFT processing, in samples.
<i>naudiochannels_</i> —	Number of broadband audio channels (before the upstream filterbank).
<i>configured_name</i>	The configured name of this plugin in the MHA configuration. Used to derive the names of the AC variables published by this plugin.
<i>rmslevel_state</i>	Start state of rmslevel filters.
<i>attack_state</i>	Start state of attack level filters.
<i>decay_state</i>	Start state of decay level filters.

5.81.3 Member Function Documentation

5.81.3.1 process() [1/2] `mha_wave_t * dc_t::process (mha_wave_t * s_in)`

Process method extracts band-specific input levels using the rmslevel, attack and decay filters on each input sample, looks up the gains and applies them to each sample of the signal in place.

Parameters

<code>s↔ _in</code>	Latest block of time-domain input signal.
-------------------------	---

Returns

`s_in` after modifying the signal in place.

5.81.3.2 process() [2/2] `mha_spec_t * dc_t::process (mha_spec_t * s_in)`

Process method extracts band-specific input levels using the attack and decay filters on the latest STFT spectrum, looks up the gains and applies them in place.

Parameters

<code>s↔ _in</code>	Latest spectrum of the STFT input signal.
-------------------------	---

Returns

`s_in` after modifying the signal in place.

5.81.3.3 explicit_insert() `void dc_t::explicit_insert ()`

5.81.3.4 get_nbands() `unsigned dc::dc_t::get_nbands () const [inline]`

Returns

Number of frequency bands per broadband input channels.

5.81.3.5 get_nch() unsigned dc::dc_t::get_nch () const [inline]

Returns

Number of frequency bands times broadband input channels.

5.81.3.6 get_level_in_db() const MHASignal::waveform_t& dc::dc_t::get_level_in_db () const [inline]

Returns

Const reference to the Matrix of input levels as computed before processed by the attack/decay filter.

5.81.3.7 get_level_in_db_adjusted() const MHASignal::waveform_t& dc::dc_t::get_level_in_db_adjusted () const [inline]

Returns

Const reference to the Matrix of input levels after being filtered by the attack/decay filter.

5.81.3.8 get_rmslevel_filter_state() std::vector< mha_real_t> dc::dc_t::get_rmslevel_filter_state () const [inline]

Returns

Filter states of first-order rmslevel low-pass filters.

5.81.3.9 get_attack_filter_state() std::vector< mha_real_t> dc::dc_t::get_attack_filter_state () const [inline]

Returns

Filter states of first-order attack low-pass filters.

5.81.3.10 get_decay_filter_state() `std::vector< mha_real_t> dc::dc_t::get_decay_↔
filter_state () const [inline]`

Returns

Filter states of max-tracking decay low-pass filters.

5.81.4 Member Data Documentation

5.81.4.1 gt `std::vector< MHATableLookup::linear_table_t> dc::dc_t::gt [private]`

Dynamic compression gains.

If `log_interp` is true, then they are stored as dB gains, otherwise they are stored as linear gains.

5.81.4.2 offset `std::vector< mha_real_t> dc::dc_t::offset [private]`

band-specific dB offsets added to measured input levels before gain lookup is performed.

5.81.4.3 rmslevel `MHAFilter::o1flt_lowpass_t dc::dc_t::rmslevel [private]`

Envelope extraction filters used in waveform processing.

5.81.4.4 attack `MHAFilter::o1flt_lowpass_t dc::dc_t::attack [private]`

Attack filters used in input level estimation.

5.81.4.5 decay `MHAFilter::o1flt_maxtrack_t dc::dc_t::decay [private]`

Maximum-tracking decay filters used in input level estimation.

5.81.4.6 bypass `bool dc::dc_t::bypass [private]`

Dynamic compression is not applied if `bypass == true`.

5.81.4.7 log_interp `bool dc::dc_t::log_interp [private]`

Flag whether gain table interpolation should be done in dB domain.

5.81.4.8 naudiochannels `unsigned int dc::dc_t::naudiochannels [private]`

Number of broadband audio channels (before the upstream filterbank)

5.81.4.9 nbands `unsigned int dc::dc_t::nbands [private]`

Number of bands per broadband audio channel.

5.81.4.10 nch `unsigned int dc::dc_t::nch [private]`

`nbands * naudiochannels`

5.81.4.11 level_in_db `MHA_AC::waveform_t dc::dc_t::level_in_db [private]`

Matrix of latest input levels before attack/decay filter.

5.81.4.12 level_in_db_adjusted `MHA_AC::waveform_t dc::dc_t::level_in_db_adjusted [private]`

Matrix of latest input levels after attack/decay filter.

5.81.4.13 fftlen `unsigned int dc::dc_t::fftlen [private]`

FFT length in samples, required for computing levels correctly.

The documentation for this class was generated from the following files:

- `dc.hh`
- `dc.cpp`

5.82 dc::dc_vars_t Class Reference

Collection of configuration variables of the `dc` plugin.

Inheritance diagram for `dc::dc_vars_t`:

Public Member Functions

- `dc_vars_t (MHAParser::parser_t &p)`
Constructor initializes the configuration language variables' data members and inserts them into the parser `p`.
- `dc_vars_t (const dc_vars_t &)=default`
Default copy constructor is used to pass a copy of all configuration variables to the runtime configuration constructor `dc_t::dc_t` (p. 400).

Public Attributes

- **MHAParser::mfloat_t gtdata**
Gain table with gains in dB.
- **MHAParser::vfloat_t gtmin**
Narrow-band input levels in dB SPL specifying for each row of `gtdata` to which input level the first gain in this row applies.
- **MHAParser::vfloat_t gtstep**
Input level increment between elements for each row of `gtdata`.
- **MHAParser::vfloat_t taurmslevel**
Low-pass filter time constants for time-domain envelope extraction.
- **MHAParser::vfloat_t tauattack**
Low-pass filter time constants for level extraction when level rises.
- **MHAParser::vfloat_t taudecay**
Low-pass filter time constants for level extraction when level falls.
- **MHAParser::vfloat_t offset**
Row-specific input level corrections in dB to apply before gain lookup in `gtdata`.
- **MHAParser::string_t filterbank**
Configured name of filterbank plugin placed upstream of this `dc` plugin.
- **MHAParser::string_t cname**
Name of the AC variable containing the number of audiochannels before the filterbank.
- **MHAParser::bool_t bypass**
Switch for bypassing the dynamic compression.
- **MHAParser::bool_t log_interp**
Interpolate gain table in dBs (vs.
- **MHAParser::string_t clientid**
Metadata: Some ID of the hearing impaired subject.
- **MHAParser::string_t gainrule**
Metadata: Some name of the gain rule that was used to compute `gtdata`.
- **MHAParser::string_t preset**
Metadata: Some name given to the current setting.
- **MHAParser::vfloat_mon_t input_level**
Narrow-band input levels of current block before attack/decay filter.
- **MHAParser::vfloat_mon_t filtered_level**
Narrow-band input levels of current block after attack/decay filter.
- **MHAParser::vfloat_mon_t center_frequencies**
Center frequencies of upstream filterbank.
- **MHAParser::vfloat_mon_t edge_frequencies**
Edge frequencies of upstream filterbank.
- **MHAParser::vfloat_mon_t band_weights**
Center frequencies of upstream filterbank.

5.82.1 Detailed Description

Collection of configuration variables of the dc plugin.

The dc plugin interface class `dc_if_t` (p. 393) inherits from `dc_vars_t` (p. 405). This class is also used to pass a copy of all configuration variables to the constructor of the runtime configuration class `dc_t` (p. 398).

5.82.2 Constructor & Destructor Documentation

5.82.2.1 `dc_vars_t()` [1/2] `dc_vars_t::dc_vars_t (MHAParser::parser_t & p) [explicit]`

Constructor initializes the configuration language variables' data members and inserts them into the parser p.

Parameters

<code>p</code>	The dc plugin interface instance into which to insert the configuration variables.
----------------	--

5.82.2.2 `dc_vars_t()` [2/2] `dc::dc_vars_t::dc_vars_t (const dc_vars_t &) [default]`

Default copy constructor is used to pass a copy of all configuration variables to the runtime configuration constructor `dc_t::dc_t` (p. 400).

5.82.3 Member Data Documentation

5.82.3.1 `gtdata` `MHAParser::mfloat_t` `dc::dc_vars_t::gtdata`

Gain table with gains in dB.

5.82.3.2 gtmin `MHAParser::vfloat_t dc::dc_vars_t::gtmin`

Narrow-band input levels in dB SPL specifying for each row of `gtdata` to which input level the first gain in this row applies.

5.82.3.3 gtstep `MHAParser::vfloat_t dc::dc_vars_t::gtstep`

Input level increment between elements for each row of `gtdata`.

5.82.3.4 taarmslevel `MHAParser::vfloat_t dc::dc_vars_t::taarmslevel`

Low-pass filter time constants for time-domain envelope extraction.

5.82.3.5 tauattack `MHAParser::vfloat_t dc::dc_vars_t::tauattack`

Low-pass filter time constants for level extraction when level rises.

5.82.3.6 taudecay `MHAParser::vfloat_t dc::dc_vars_t::taudecay`

Low-pass filter time constants for level extraction when level falls.

5.82.3.7 offset `MHAParser::vfloat_t dc::dc_vars_t::offset`

Row-specific input level corrections in dB to apply before gain lookup in `gtdata`.

5.82.3.8 filterbank `MHAParser::string_t dc::dc_vars_t::filterbank`

Configured name of filterbank plugin placed upstream of this `dc` plugin.

Used to lookup the AC variables published by the filterbank.

5.82.3.9 chname `MHAParser::string_t dc::dc_vars_t::chname`

Name of the AC variable containing the number of audiochannels before the filterbank.

5.82.3.10 bypass `MHAParser::bool_t dc::dc_vars_t::bypass`

Switch for bypassing the dynamic compression.

5.82.3.11 log_interp `MHAParser::bool_t dc::dc_vars_t::log_interp`

Interpolate gain table in dBs (vs.

interpolating linear factors).

5.82.3.12 clientid `MHAParser::string_t dc::dc_vars_t::clientid`

Metadata: Some ID of the hearing impaired subject.

5.82.3.13 gainrule `MHAParser::string_t dc::dc_vars_t::gainrule`

Metadata: Some name of the gain rule that was used to compute gtdata.

5.82.3.14 preset `MHAParser::string_t dc::dc_vars_t::preset`

Metadata: Some name given to the current setting.

5.82.3.15 input_level `MHAParser::vfloat_mon_t dc::dc_vars_t::input_level`

Narrow-band input levels of current block before attack/decay filter.

5.82.3.16 filtered_level `MHAParser::vfloat_mon_t dc::dc_vars_t::filtered_level`

Narrow-band input levels of current block after attack/decay filter.

5.82.3.17 center_frequencies `MHAParser::vfloat_mon_t dc::dc_vars_t::center_frequencies`

Center frequencies of upstream filterbank.

5.82.3.18 edge_frequencies `MHAParser::vfloat_mon_t dc::dc_vars_t::edge_frequencies`

Edge frequencies of upstream filterbank.

5.82.3.19 band_weights `MHAParser::vfloat_mon_t dc::dc_vars_t::band_weights`

Center frequencies of upstream filterbank.

The documentation for this class was generated from the following files:

- `dc.hh`
- `dc.cpp`

5.83 dc::dc_vars_validator_t Class Reference

Consistency checker.

Inheritance diagram for `dc::dc_vars_validator_t`:

Public Member Functions

- **dc_vars_validator_t** (**dc_vars_t** &*v*, unsigned int *s*, **mha_domain_t** *domain*)
Expands vectors in v, checks for consistency.

5.83.1 Detailed Description

Consistency checker.

The runtime configuration class **dc_t** (p. 398) inherits from this class.

5.83.2 Constructor & Destructor Documentation

5.83.2.1 dc_vars_validator_t() `dc_vars_validator_t::dc_vars_validator_t (dc_vars_t & v, unsigned int s, mha_domain_t domain)`

Expands vectors in *v*, checks for consistency.

Parameters

<i>v</i>	Reference to dc_t (p. 398) 's copy of the configuration variables.
<i>s</i>	Total number of compression bands: bands x channels.
<i>domain</i>	MHA_WAVEFORM or MHA_SPECTRUM.

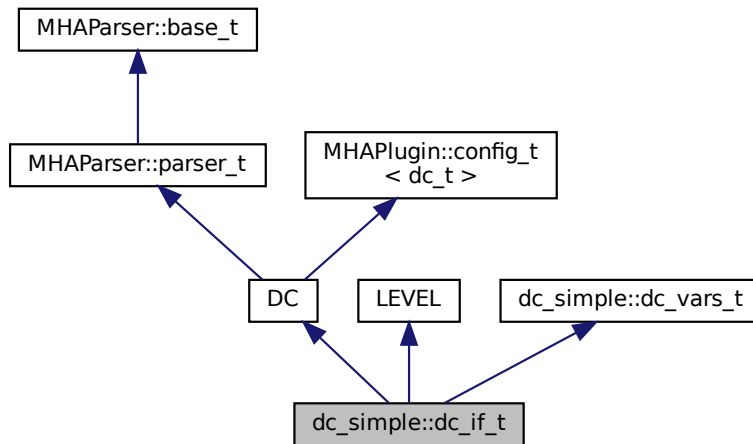

The documentation for this class was generated from the following files:

- **dc.hh**
- **dc.cpp**

5.84 dc_simple::dc_if_t Class Reference

interface class for **dc_simple** (p. 88)

Inheritance diagram for `dc_simple::dc_if_t`:

Public Member Functions

- **dc_if_t** (**MHA_AC::algo_comm_t** &iac, const std::string &configured_name)
*Constructor instantiates one **dc_simple** (p. 88) plugin.*
- void **prepare** (**mhaconfig_t** &tf)
*Prepare **dc_simple** (p. 88) plugin for signal processing.*
- void **release** ()
Sets prepared back to False.
- **mha_spec_t** * **process** (**mha_spec_t** *s)
Main process callback.
- **mha_wave_t** * **process** (**mha_wave_t** *s)
Main process callback.

Private Member Functions

- void **update_dc** ()
*Update **dc_t** (p. 417) runtime config when configuration parameters have changed.*
- void **update_level** ()
*Update **level_smoother_t** (p. 427) runtime config when configuration parameters have changed.*
- void **has_been_modified** ()

Additional Inherited Members

5.84.1 Detailed Description

interface class for **dc_simple** (p. 88)

5.84.2 Constructor & Destructor Documentation

5.84.2.1 dc_if_t() `dc_simple::dc_if_t::dc_if_t (MHA_AC::algo_comm_t & iac, const std::string & configured_name)`

Constructor instantiates one **dc_simple** (p. 88) plugin.

5.84.3 Member Function Documentation

5.84.3.1 prepare() `void dc_simple::dc_if_t::prepare (mhaconfig_t & tf) [virtual]`

Prepare **dc_simple** (p. 88) plugin for signal processing.

Parameters

<i>tf</i>	signal_dimensions
-----------	-------------------

Implements **MHAPlugin::plugin_t< dc_t >** (p. 1201).

5.84.3.2 release() `void dc_simple::dc_if_t::release () [virtual]`

Sets prepared back to False.

Reimplemented from **MHAPlugin::plugin_t< dc_t >** (p. 1202).

5.84.3.3 process() [1/2] `mha_spec_t * dc_simple::dc_if_t::process (mha_spec_t * s)`

Main process callback.

Takes mhatype spectrum input and calls type DC and LEVEL process methods, returning mhatype spectrum.

Parameters

<i>s</i>	input/output signal
----------	---------------------

5.84.3.4 process() [2/2] `mha_wave_t * dc_simple::dc_if_t::process (mha_wave_t * s)`

Main process callback.

Takes mhatype wave input and calls type DC and LEVEL process methods, returning mhatype wave.

Parameters

<i>s</i>	input/output signal
----------	---------------------

5.84.3.5 update_dc() void dc_simple::dc_if_t::update_dc () [private]

Update **dc_t** (p. 417) runtime config when configuration parameters have changed.

5.84.3.6 update_level() void dc_simple::dc_if_t::update_level () [private]

Update **level_smoother_t** (p. 427) runtime config when configuration parameters have changed.

5.84.3.7 has_been_modified() void dc_simple::dc_if_t::has_been_modified () [inline], [private]

5.84.3.8 read_modified() void dc_simple::dc_if_t::read_modified () [inline], [private]

5.84.3.9 update_level_mon() void dc_simple::dc_if_t::update_level_mon () [private]

Updates the data of variable **mon_l** in **dc_t** (p. 417).

5.84.3.10 update_gain_mon() void dc_simple::dc_if_t::update_gain_mon () [private]

Updates the data of variable **mon_g** in **dc_t** (p. 417).

5.84.4 Member Data Documentation

5.84.4.1 clientid `MHAParser::string_t dc_simple::dc_if_t::clientid [private]`

MHA Parser variables.

5.84.4.2 gainrule `MHAParser::string_t dc_simple::dc_if_t::gainrule [private]`

5.84.4.3 preset `MHAParser::string_t dc_simple::dc_if_t::preset [private]`

5.84.4.4 modified `MHAParser::int_mon_t dc_simple::dc_if_t::modified [private]`

5.84.4.5 mon_l `MHAParser::vfloat_mon_t dc_simple::dc_if_t::mon_l [private]`

5.84.4.6 mon_g `MHAParser::vfloat_mon_t dc_simple::dc_if_t::mon_g [private]`

5.84.4.7 filterbank `MHAParser::string_t dc_simple::dc_if_t::filterbank [private]`

5.84.4.8 center_frequencies `MHAParser::vfloat_mon_t dc_simple::dc_if_t::center_↔
frequencies [private]`

5.84.4.9 edge_frequencies `MHAParser::vfloat_mon_t dc_simple::dc_if_t::edge_↔
frequencies [private]`

5.84.4.10 patchbay `MHAEvents::patchbay_t< dc_if_t>` `dc_simple::dc_if_t::patchbay`
[private]

5.84.4.11 prepared `bool` `dc_simple::dc_if_t::prepared` [private]

The documentation for this class was generated from the following files:

- `dc_simple.hh`

5.85 dc_simple::dc_t Class Reference

Runtime config class for `dc_simple` (p. 88) plugin.

Inheritance diagram for `dc_simple::dc_t`:

Classes

- class `line_t`
Helper class for usage in computing compression, expansion and limiting.

Public Member Functions

- `dc_t` (const `dc_vars_t` &vars, unsigned int nch)
Constructor.
- `mha_spec_t` * `process` (`mha_spec_t` *s, `mha_wave_t` *level_db)
Process callback.
- `mha_wave_t` * `process` (`mha_wave_t` *s, `mha_wave_t` *level_db)
Process callback.

Public Attributes

- `std::vector< float > mon_l`
- `std::vector< float > mon_g`

Private Attributes

- `std::vector< mha_real_t > expansion_threshold`
Threshold below which to apply expansion.
- `std::vector< mha_real_t > limiter_threshold`
Threshold below which to compress.
- `std::vector< line_t > compression`
The linear function for applying compression.
- `std::vector< line_t > expansion`
The linear function for applying expansion.
- `std::vector< line_t > limiter`
The linear function for applying limiting.
- `std::vector< mha_real_t > maxgain`
Gain should not exceed this value.
- unsigned int **nbands**
Number of bands.

Additional Inherited Members

5.85.1 Detailed Description

Runtime config class for **dc_simple** (p. 88) plugin.

5.85.2 Constructor & Destructor Documentation

5.85.2.1 dc_t() `dc_simple::dc_t::dc_t (`
`const dc_vars_t & vars,`
`unsigned int nch)`

Constructor.

5.85.3 Member Function Documentation

5.85.3.1 process() [1/2] `mha_spec_t * dc_simple::dc_t::process (`
`mha_spec_t * s,`
`mha_wave_t * level_db)`

Process callback.

Compresses, expands or limits depending on the gain settings and filtered signal levels. Compresses the spectrum input signal in individual bands.

Parameters

<code>s</code>	input/output signal
<code>level_db</code>	smoothed levels of input signal in dB SPL

Returns

- s. The input signal is modified in place.

5.85.3.2 process() [2/2] `mha_wave_t * dc_simple::dc_t::process (`
`mha_wave_t * s,`
`mha_wave_t * level_db)`

Process callback.

Compresses, expands or limits depending on the gain settings and filtered signal levels. Compresses the waveform input signal in individual bands.

Parameters

<code>s</code>	input/output signal
<code>level_db</code>	smoothed levels of input signal in dB SPL

Returns

- s. The input signal is modified in place.

5.85.4 Member Data Documentation

5.85.4.1 expansion_threshold `std::vector< mha_real_t> dc_simple::dc_t::expansion↔
_threshold [private]`

Threshold below which to apply expansion.

5.85.4.2 limiter_threshold `std::vector< mha_real_t> dc_simple::dc_t::limiter↔
threshold [private]`

Threshold below which to compress.

5.85.4.3 compression `std::vector< line_t> dc_simple::dc_t::compression [private]`

The linear function for applying compression.

5.85.4.4 expansion `std::vector< line_t> dc_simple::dc_t::expansion [private]`

The linear function for applying expansion.

5.85.4.5 limiter `std::vector< line_t> dc_simple::dc_t::limiter [private]`

The linear function for applying limiting.

5.85.4.6 maxgain `std::vector< mha_real_t> dc_simple::dc_t::maxgain [private]`

Gain should not exceed this value.

5.85.4.7 nbands unsigned int dc_simple::dc_t::nbands [private]

Number of bands.

5.85.4.8 mon_l std::vector<float> dc_simple::dc_t::mon_l

5.85.4.9 mon_g std::vector<float> dc_simple::dc_t::mon_g

The documentation for this class was generated from the following files:

- **dc_simple.hh**
- **dc_simple.cpp**

5.86 dc_simple::dc_t::line_t Class Reference

Helper class for usage in computing compression, expansion and limiting.

Public Member Functions

- **line_t (mha_real_t x1, mha_real_t y1, mha_real_t x2, mha_real_t y2)**
Constructor used for compression which takes two x and y coordinates each to find m and y0
- **line_t (mha_real_t x1, mha_real_t y1, mha_real_t m_)**
Constructor used for expansion and limiting which takes x and y coordinates and a gradient, giving y0.
- **mha_real_t operator() (mha_real_t x)**
Operator overload which returns.

Private Attributes

- **mha_real_t m**
The gradient and y-intercept.
- **mha_real_t y0**

5.86.1 Detailed Description

Helper class for usage in computing compression, expansion and limiting.

5.86.2 Constructor & Destructor Documentation

5.86.2.1 line_t() [1/2] `dc_simple::dc_t::line_t::line_t (`
`mha_real_t x1,`
`mha_real_t y1,`
`mha_real_t x2,`
`mha_real_t y2)`

Constructor used for compression which takes two x and y coordinates each to find m and y0

5.86.2.2 line_t() [2/2] `dc_simple::dc_t::line_t::line_t (`
`mha_real_t x1,`
`mha_real_t y1,`
`mha_real_t m_)`

Constructor used for expansion and limiting which takes x and y coordinates and a gradient, giving y0.

5.86.3 Member Function Documentation

5.86.3.1 operator() `mha_real_t dc_simple::dc_t::line_t::operator() (`
`mha_real_t x) [inline]`

Operator overload which returns.

Parameters

<i>x</i>	
----------	--

Returns

y values mapped to x by a linear equation with gradient m and intercept y0

5.86.4 Member Data Documentation

5.86.4.1 m mha_real_t dc_simple::dc_t::line_t::m [private]

The gradient and y-intercept.

5.86.4.2 y0 mha_real_t dc_simple::dc_t::line_t::y0 [private]

The documentation for this class was generated from the following files:

- [dc_simple.hh](#)
- [dc_simple.cpp](#)

5.87 dc_simple::dc_vars_t Class Reference

class for [dc_simple](#) (p. 88) plugin which registers variables to [MHAParser](#) (p. 123).

Inheritance diagram for dc_simple::dc_vars_t:

Public Member Functions

- `dc_vars_t (MHAParser::parser_t &p)`

Public Attributes

5.87.3.3 maxgain `MHAParser::vfloat_t dc_simple::dc_vars_t::maxgain`

5.87.3.4 expansion_threshold `MHAParser::vfloat_t dc_simple::dc_vars_t::expansion↔
_threshold`

5.87.3.5 expansion_slope `MHAParser::vfloat_t dc_simple::dc_vars_t::expansion↔
slope`

5.87.3.6 limiter_threshold `MHAParser::vfloat_t dc_simple::dc_vars_t::limiter↔
threshold`

5.87.3.7 tauattack `MHAParser::vfloat_t dc_simple::dc_vars_t::tauattack`

5.87.3.8 taudecay `MHAParser::vfloat_t dc_simple::dc_vars_t::taudecay`

5.87.3.9 bypass `MHAParser::bool_t dc_simple::dc_vars_t::bypass`

The documentation for this class was generated from the following files:

- `dc_simple.hh`
- `dc_simple.cpp`

5.88 dc_simple::dc_vars_validator_t Class Reference

Helper class to check sizes of configuration variable vectors.

Inheritance diagram for dc_simple::dc_vars_validator_t:

Public Member Functions

- **dc_vars_validator_t** (const **dc_vars_t** &v, unsigned int s)
Checks that all vectors in v have size s or size 1.

5.88.1 Detailed Description

Helper class to check sizes of configuration variable vectors.

5.88.2 Constructor & Destructor Documentation

5.88.2.1 dc_vars_validator_t() dc_simple::dc_vars_validator_t::dc_vars_validator_t
(
 const **dc_vars_t** & v,
 unsigned int s)

Checks that all vectors in v have size s or size 1.

Parameters

v	Aggregation of vectors to check the sizes of.
s	Desired vector size for all vectors

Exceptions

MHA_Error (p. 818)	if $s == 0$.
MHA_Error (p. 818)	if the size of any vector in v is neither s nor 1.

The documentation for this class was generated from the following files:

- `dc_simple.hh`
- `dc_simple.cpp`

5.89 dc_simple::level_smoother_t Class Reference

Class which computes smoothed input levels on individual bands, using an attack and release filter, which are a first order low pass filter and a maximum tracker filter, respectively.

Inheritance diagram for `dc_simple::level_smoother_t`:

Public Member Functions

- `level_smoother_t` (const `dc_vars_t` &vars, `mha_real_t` filter_rate, `mhaconfig_↔t` buscfg)
- `mha_wave_t * process` (`mha_spec_t *s`)
Process callback.
- `mha_wave_t * process` (`mha_wave_t *s`)
Process callback.

Private Attributes

- **MHAFilter::o1flt_lowpass_t attack**
first order low pass attack filter
- **MHAFilter::o1flt_maxtrack_t decay**
maximum tracker decay filter
- unsigned int **nbands**
Total number of frequency bands of this compressor.
- unsigned int **ftflen**
- **MHASignal::waveform_t level_wave**
- **MHASignal::waveform_t level_spec**

Additional Inherited Members

5.89.1 Detailed Description

Class which computes smoothed input levels on individual bands, using an attack and release filter, which are a first order low pass filter and a maximum tracker filter, respectively.

5.89.2 Constructor & Destructor Documentation

5.89.2.1 level_smoother_t() `dc_simple::level_smoother_t::level_smoother_t (const dc_vars_t & vars, mha_real_t filter_rate, mhaconfig_t buscfg)`

5.89.3 Member Function Documentation

5.89.3.1 process() [1/2] `mha_wave_t * dc_simple::level_smoother_t::process (mha_spec_t * s)`

Process callback.

Computes smoothed levels from the input mha type spectrum by applying a lowpass and maximum tracker filter

Returns

smoothed input levels in dB SPL

Parameters

s	input signal
---	--------------

5.89.3.2 process() [2/2] `mha_wave_t * dc_simple::level_smoother_t::process (mha_wave_t * s)`

Process callback.

Computes smoothed levels from the input mha type waveform over individual bands by applying a lowpass and maximum tracker filter

Returns

smoothed input levels in dB SPL

Parameters

s	input/output signal
---	---------------------

5.89.4 Member Data Documentation

5.89.4.1 attack `MHAFilter::o1flt_lowpass_t dc_simple::level_smoother_t::attack`
[private]

first order low pass attack filter

5.89.4.2 decay `MHAFilter::o1flt_maxtrack_t dc_simple::level_smoother_t::decay`
[private]

maximum tracker decay filter

5.89.4.3 nbands `unsigned int dc_simple::level_smoother_t::nbands [private]`

Total number of frequency bands of this compressor.

5.89.4.4 fftlen `unsigned int dc_simple::level_smoother_t::fftlen [private]`

- void **prepare** (**mhaconfig_t** &)
- void **release** ()

Private Member Functions

- void **update_cfg** ()

Private Attributes

- **MHAParser::vfloat_t** **weights**
Linear weights to be multiplied with the audio signal, one factor for each channel.
- **MHAParser::vint_t** **delay**
vector of channel-specific delays, in samples.
- **MHAEvents::patchbay_t** < **delaysum_wave_if_t** > **patchbay**
The patchbay to react to config changes.

Additional Inherited Members

5.91.1 Detailed Description

Interface class for the delaysum plugin.

This plugin allows to delay and sum multiple input channels using individual delays and weights. After each channel gets delayed it is multiplied with the given weight and then added to the single outout channel.

5.91.2 Constructor & Destructor Documentation

5.91.2.1 delaysum_wave_if_t() `delaysum::delaysum_wave_if_t::delaysum_wave_if_t (MHA_AC::algo_comm_t & iac, const std::string & configured_name)`

5.91.3 Member Function Documentation

5.91.3.1 process() `mha_wave_t * delaysum::delaysum_wave_if_t::process (mha_wave_t * wave)`

5.91.3.2 prepare() `void delaysum::delaysum_wave_if_t::prepare (mhaconfig_t & tcfg) [virtual]`

Implements `MHAPlugin::plugin_t< delaysum_wave_t >` (p. 1201).

5.91.3.3 release() `void delaysum::delaysum_wave_if_t::release () [virtual]`

Reimplemented from `MHAPlugin::plugin_t< delaysum_wave_t >` (p. 1202).

5.91.3.4 update_cfg() `void delaysum::delaysum_wave_if_t::update_cfg () [private]`

5.91.4 Member Data Documentation

5.91.4.1 weights `MHAParser::vfloat_t delaysum::delaysum_wave_if_t::weights [private]`

Linear weights to be multiplied with the audio signal, one factor for each channel.

Order is [chan0, chan1, ...]

5.91.4.2 delay `MHAParser::vint_t delaysum::delaysum_wave_if_t::delay [private]`

vector of channel-specific delays, in samples.

5.91.4.3 patchbay `MHAEvents::patchbay_t< delaysum_wave_if_t> delaysum::delaysum_wave_if_t::patchbay [private]`

The patchbay to react to config changes.

The documentation for this class was generated from the following file:

- `delaysum_wave.cpp`

5.92 delaysum::delaysum_wave_t Class Reference

Runtime configuration of the delaysum_wave plugin.

Inheritance diagram for delaysum::delaysum_wave_t:

Public Member Functions

- **delaysum_wave_t** (unsigned int nch, unsigned int fragsize, const std::vector< **mha_↔real_t** > &weights_, const std::vector< int > &delays_)
Constructor of the runtime configuration.
- **mha_wave_t * process (mha_wave_t *)**

Private Attributes

- std::vector< **mha_real_t** > **weights**
Relative weights for each channel. Order is [chan0, chan1, ...].
- **MHASignal::waveform_t out**
Output waveform.

5.92.1 Detailed Description

Runtime configuration of the delaysum_wave plugin.

Inherits from the already present delay_t class. The constructor initializes and validates the runtime configuration and forwards the delay vector to the delay_t class. The process function first calls delay_t::process and then multiplies every output channel with its weight and adds them into the output channel.

5.92.2 Constructor & Destructor Documentation

5.92.2.1 delaysum_wave_t() delaysum::delaysum_wave_t::delaysum_wave_t (unsigned int nch, unsigned int fragsize, const std::vector< **mha_real_t** > & weights_, const std::vector< int > & delays_)

Constructor of the runtime configuration.

Parameters

<i>nch</i>	Number of input channels.
<i>fragsize</i>	Size of one input fragment in frames.
<i>weights_↔</i>	Vector of weights for each channel.
<i>delays_↔</i>	Vector of delays, one entry per channel.

5.92.3 Member Function Documentation

5.92.3.1 process() `mha_wave_t * delaysum::delaysum_wave_t::process (mha_wave_t * signal)`

5.92.4 Member Data Documentation

5.92.4.1 weights `std::vector< mha_real_t> delaysum::delaysum_wave_t::weights [private]`

Relative weights for each channel. Order is [chan0, chan1, ...].

5.92.4.2 out `MHASignal::waveform_t delaysum::delaysum_wave_t::out [private]`

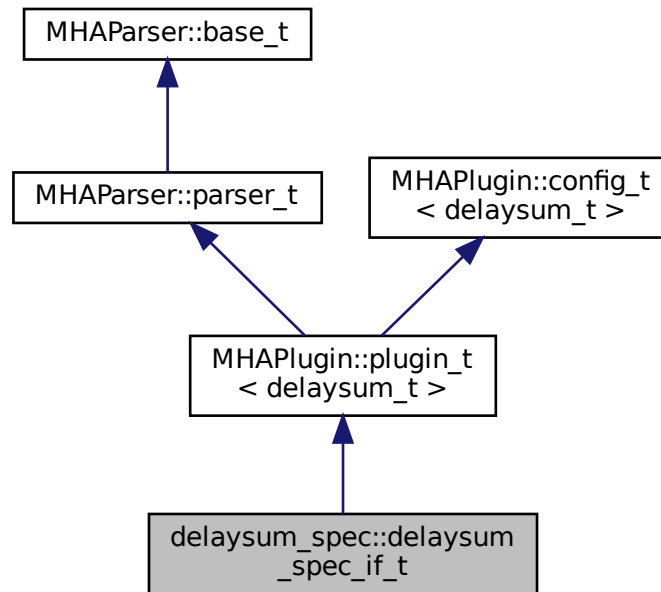

Output waveform.

5.99 double2acvar::double2acvar_t Class Reference

Plugin interface class for **double2acvar** (p. 91).

Inheritance diagram for `double2acvar::double2acvar_t`:

Public Member Functions

- **double2acvar_t (MHA_AC::algo_comm_t &iac, const std::string &configured_name)**
Standard plugin constructor.
- **~double2acvar_t ()=default**
- **template<class T >**
T * process (T *s)
process() (p. 455) does not alter the signal and has same implementation regardless of signal domain.
- **void poll_latest_value_and_reinsert ()**
Called from process() (p. 455) and, when allowed, also from on_configuration_update() (p. 456).
- **void prepare_ (mhaconfig_t &)**
Prepare method as expected by the plugin interface macros.
- **void release_ ()**
Release method as expected by the plugin interface macros.
- **void on_configuration_update ()**
Callback function on write access to the string configuration value.

Private Attributes

- **MHA_AC::double_t ac_double**
AC variable inserted by this plugin.
- **MHAEvents::patchbay_t< double2acvar_t > patchbay**
Callback router.
- **bool is_prepared**
Flag to keep track if we are currently prepared.

Additional Inherited Members

5.99.1 Detailed Description

Plugin interface class for **double2acvar** (p. 91).

5.99.2 Constructor & Destructor Documentation

5.99.2.1 double2acvar_t() `double2acvar::double2acvar_t::double2acvar_t (MHA_AC::algo_comm_t & iac, const std::string & configured_name)`

Standard plugin constructor.

Parameters

<i>iac</i>	Algorithm communication variable space.
<i>configured_name</i>	Configured name of this plugin, also used as name of the AC variable.

5.99.2.2 `~double2acvar_t()` `double2acvar::double2acvar_t::~~double2acvar_t () [default]`

5.99.3 Member Function Documentation

5.99.3.1 `process()` `template<class T >`
`T * double2acvar::double2acvar_t::process (`
`T * s)`

process() (p. 455) does not alter the signal and has same implementation regardless of signal domain.

Parameters

<i>s</i>	Pointer to input signal structure, <code>mha_wave_t</code> (p. 894) or <code>mha_spec_t</code> (p. 848).
----------	--

Returns

s, unaltered.

5.99.3.2 `poll_latest_value_and_reinsert()` `void double2acvar::double2acvar_t::poll_↔`
`latest_value_and_reinsert ()`

Called from **process()** (p. 455) and, when allowed, also from **on_configuration_update()** (p. 456).

poll_latest_value_and_reinsert() (p. 455) retrieves the latest configured value and reinserts the AC variable into the AC space.

5.99.3.3 prepare_() `void double2acvar::double2acvar_t::prepare_ (mhaconfig_t &)`

Prepare method as expected by the plugin interface macros.

Parameter is not used nor altered. Sets `is_prepared` flag.

5.99.3.4 release_() `void double2acvar::double2acvar_t::release_ ()`

Release method as expected by the plugin interface macros.

Resets `is_prepared` flag.

5.99.3.5 on_configuration_update() `void double2acvar::double2acvar_t::on_configuration↔_update ()`

Callback function on write access to the string configuration value.

5.99.4 Member Data Documentation

5.99.4.1 ac_double `MHA_AC::double_t double2acvar::double2acvar_t::ac_double [private]`

AC variable inserted by this plugin.

5.99.4.2 patchbay `MHAEvents::patchbay_t< double2acvar_t> double2acvar::double2acvar↔_t::patchbay [private]`

Callback router.

5.99.4.3 is_prepared `bool double2acvar::double2acvar_t::is_prepared [private]`

Flag to keep track if we are currently prepared.

If we are, then signal processing is active and AC variables may only be accessed when MHA is currently executing out `process()` (p. 455) method.

The documentation for this class was generated from the following file:

- `double2acvar.cpp`

5.100 dropgen_t Class Reference

Inheritance diagram for `dropgen_t`:

Public Member Functions

- `dropgen_t (MHA_AC::algo_comm_t &iac, const std::string &configured_name)`

5.101 droptect_t Class Reference

Detect dropouts in a signal with a constant spectrum.

Inheritance diagram for droptect_t:

Public Member Functions

- **droptect_t** (**MHA_AC::algo_comm_t** &iac, const std::string &configured_name)

This constructor initializes the configuration language variables and inserts them into the MHA configuration tree.
- void **prepare** (**mhaconfig_t** &signal_info)

Allocates and initializes storage for this algorithm.
- void **release** (void)

Deallocates storage.
- **mha_spec_t** * **process** (**mha_spec_t** *signal)

Compares current spectrum against history.

Private Attributes

- **MHAParser::vint_mon_t** dropouts
- **MHAParser::vint_mon_t** consecutive_dropouts
- **MHAParser::int_mon_t** blocks

- **MHAParser::bool_t** reset
- **MHAParser::float_t** threshold
- **MHASignal::waveform_t * current_powspec**
- **MHASignal::waveform_t * filtered_powspec**
- **MHAParser::float_t** tau
- `std::vector< bool >` filter_activated
- **float** period
The period of the process callback (duration of fragsize in seconds)
- **MHAParser::mfloat_mon_t filtered_powspec_mon**
User access to filtered spectrum.
- **MHAParser::vfloat_mon_t level_mon**
User access to broadband levels.

Additional Inherited Members

5.101.1 Detailed Description

Detect dropouts in a signal with a constant spectrum.

5.101.2 Constructor & Destructor Documentation

5.101.2.1 droptect_t() `droptect_t::droptect_t (`
 MHA_AC::algo_comm_t & *iac*,
 const `std::string` & *configured_name*)

This constructor initializes the configuration language variables and inserts them into the MHA configuration tree.

5.101.3 Member Function Documentation

5.101.3.1 prepare() `void droptect_t::prepare (`
 mhaconfig_t & *signal_info*) [virtual]

Allocates and initializes storage for this algorithm.

Parameters

<i>signal_info</i>	contains fft length, number of channels, fft length and hop size.
--------------------	---

Implements **MHAPLugin::plugin_t< int >** (p. 1201).

5.101.3.2 release() `void droptect_t::release (void) [virtual]`

Deallocates storage.

Reimplemented from **MHAPLugin::plugin_t< int >** (p. 1202).

5.101.3.3 process() `mha_spec_t * droptect_t::process (mha_spec_t * signal)`

Compares current spectrum against history.

If spectral power has changed or is below threshold, this is interpreted as dropout occurrence.

5.101.4 Member Data Documentation

5.101.4.1 dropouts `MHAParser::vint_mon_t droptect_t::dropouts [private]`

5.103 `dynamiclib_t` Class Reference

Wrapper class around a shared library.

Inheritance diagram for `dynamiclib_t`:

Public Member Functions

- **`dynamiclib_t`** (`const std::string &name_`)
C'tor of the wrapper class.
- virtual void * **`resolve`** (`const std::string &name_`)
Resolves the function specified by `name_` and returns a pointer to it or a `nullptr` if the function was not found in the wrapped library.
- virtual void * **`resolve_checked`** (`const std::string &name_`)
Resolves the function specified by `name_` and returns a pointer to it or throws an exception if the function was not found.
- virtual **`~dynamiclib_t`** ()
D'tor.
- virtual const std::string & **`getmodulename`** () const
Returns unqualified filename of the wrapped library sans file suffix.
- virtual const std::string & **`getname`** () const

Protected Member Functions

- `dynamiclib_t ()`
Default constructor.
- `void load_lib (const std::string &name_)`
Loads the library specified in `name_` and saves a handle in `h`.

Protected Attributes

- `std::string fullname`
Fully qualified file name of the library.
- `std::string modulename`
Unqualified file name of the library.
- `mha_libhandle_t h`
Handle to the shared library.

5.103.1 Detailed Description

Wrapper class around a shared library.

Encapsulates the OS-specific stuff of loading the shared library, resolving functions, etc... Uses the `dload` API on Linux/macOS and the `win32` API on Windows

5.103.2 Constructor & Destructor Documentation

5.103.2.1 `dynamiclib_t()` [1/2] `dynamiclib_t::dynamiclib_t (const std::string & name_)`

C'tor of the wrapper class.

Takes a the the file name of a shared library w/o the suffix as argument, searches for the library in the system-dependent standard paths for libraries and in `MHA_LIBRARY_PATH`. Calls `load_lib` for the actual work.

Parameters

<code>name_↔</code>	File name of the shared library, without suffix
<code>_</code>	

Exceptions

<i>MHA_Error</i> (p. 818)	if the library can not be found or can not be loaded
---	--

5.103.2.2 `~dynamiclib_t()` `dynamiclib_t::~dynamiclib_t ()` [virtual]

D'tor.

Closes the library handle.

5.103.2.3 `dynamiclib_t()` [2/2] `dynamiclib_t::dynamiclib_t ()` [protected]

Default constructor.

5.103.3 Member Function Documentation

5.103.3.1 `resolve()` `void * dynamiclib_t::resolve (`
`const std::string & name_)` [virtual]

Resolves the function specified by `name_` and returns a pointer to it or a nullptr if the function was not found in the wrapped library.

Parameters

<code>name_↔</code>	Name of the function to be resolved
<code>_</code>	

Returns

Pointer to the function

Reimplemented in `pluginlib_t` (p. [1409](#)).

5.103.3.2 resolve_checked() `void * dynamiclib_t::resolve_checked (const std::string & name_) [virtual]`

Resolves the function specified by `name_` and returns a pointer to it or throws an exception if the function was not found.

Parameters

<code>name_↔</code>	Name of the function to be resolved
<code>_</code>	

Returns

Pointer to the function

5.103.3.3 getmodulename() `virtual const std::string& dynamiclib_t::getmodulename () const [inline], [virtual]`

Returns unqualified filename of the wrapped library sans file suffix.

Returns

Unqualified filename of the wrapped library

5.103.3.4 getname() `virtual const std::string& dynamiclib_t::getname () const [inline], [virtual]`

5.103.3.5 load_lib() `void dynamiclib_t::load_lib (const std::string & name_) [protected]`

Loads the library specified in `name_` and saves a handle in `h`.

Parameters

<i>name</i> ↔ —	unqualified file name of the shared library w/o suffix
--------------------	--

5.103.4 Member Data Documentation**5.103.4.1 fullname** `std::string dynamiclib_t::fullname` [protected]

Fully qualified file name of the library.

5.103.4.2 modulename `std::string dynamiclib_t::modulename` [protected]

Unqualified file name of the library.

5.103.4.3 h `mha_libhandle_t dynamiclib_t::h` [protected]

Handle to the shared library.

The documentation for this class was generated from the following files:

- **mha_os.h**
- **mha_os.cpp**

5.104 DynComp::dc_afterburn_rt_t Class Reference

Real-time class for after burn effect.

Public Member Functions

- **dc_afterburn_rt_t** (`const std::vector< float > &cf`, unsigned int **channels**, float *srate*, `const dc_afterburn_vars_t &vars`)
- void **burn** (`float &Gin`, float *Lin*, unsigned int *band*, unsigned int *channel*)
gain modifier method (afterburn).

Private Attributes

- `std::vector< float >` **drain_inv**
- `std::vector< float >` **conflux**
- `std::vector< float >` **maxgain**
- `std::vector< float >` **mpo_inv**
- `std::vector< MHAFilter::o1flt_lowpass_t >` **lp**

5.104.1 Detailed Description

Real-time class for after burn effect.

The constructor processes the parameters and creates pre-processed variables for efficient realtime processing.

5.104.2 Constructor & Destructor Documentation

5.104.2.1 dc_afterburn_rt_t() `DynComp::dc_afterburn_rt_t::dc_afterburn_rt_t (const std::vector< float > & cf, unsigned int channels, float srate, const dc_afterburn_vars_t & vars)`

5.104.3 Member Function Documentation

5.104.3.1 burn() `void DynComp::dc_afterburn_rt_t::burn (float & Gin, float Lin, unsigned int band, unsigned int channel) [inline]`

gain modifier method (afterburn).

Parameters

<i>Gin</i>	Linear gain.
<i>Lin</i>	Input level (Pascal).
<i>band</i>	Filter band number.
<i>channel</i>	Channel number.

Output level for MPO is estimated by $Gin * Lin$.

5.104.4 Member Data Documentation

5.104.4.1 drain_inv `std::vector<float> DynComp::dc_afterburn_rt_t::drain_inv [private]`

5.104.4.2 conflux `std::vector<float> DynComp::dc_afterburn_rt_t::conflux [private]`

5.104.4.3 maxgain `std::vector<float> DynComp::dc_afterburn_rt_t::maxgain [private]`

- std::vector< std::vector< std::vector< **mha_real_t** > > > **data**

5.107.1 Detailed Description

Gain table class.

This gain table is intended to efficient table lookup, i.e, interpolation of levels, and optional interpolation of frequencies. Sample input levels and sample frequencies are given in the constructor. The gain entries can be updated with the **update()** (p. 480) member function via a gain prescription rule from an auditory profile.

5.107.2 Constructor & Destructor Documentation

5.107.2.1 gaintable_t() `gaintable_t::gaintable_t (`
`const std::vector< mha_real_t > & LInput,`
`const std::vector< mha_real_t > & FCenter,`
`unsigned int channels)`

Constructor.

Parameters

<i>LInput</i>	Input level samples, in equivalent LTASS_combined dB SPL.
<i>FCenter</i>	Frequency samples in Hz (e.g., center frequencies of filterbank).
<i>channels</i>	Number of audio channels (typically 2).

5.107.2.2 ~gaintable_t() `gaintable_t::~~gaintable_t ()`

5.107.3 Member Function Documentation

5.107.3.1 update() `void gaintable_t::update (`
`std::vector< std::vector< std::vector< mha_real_t > > > newGain)`

Update gains from an external table.

Parameters

<i>newGain</i>	New gain table entries.
----------------	-------------------------

Dimension change is not allowed. The number of entries are checked.

5.107.3.2 get_gain() [1/3] `mha_real_t gaintable_t::get_gain (`
`mha_real_t Lin,`
`mha_real_t Fin,`
`unsigned int channel)`

Read Gain from gain table.

Parameters

<i>Lin</i>	Input level
<i>Fin</i>	Input frequency (no match required)
<i>channel</i>	Audio channel

5.107.3.3 get_gain() [2/3] `mha_real_t gaintable_t::get_gain (`
`mha_real_t Lin,`
`unsigned int band,`
`unsigned int channel)`

Read Gain from gain table.

Parameters

<i>Lin</i>	Input level
<i>band</i>	Input frequency band
<i>channel</i>	Audio channel

5.107.3.4 get_gain() [3/3] `void gaintable_t::get_gain (`
`const mha_wave_t & Lin,`
`mha_wave_t & Gain)`

Read Gains from gain table.

Parameters

<i>Lin</i>	Input levels.
<i>Gain</i>	Output gain.

The number of channels in Lin and Gain must match the number of bands times number of channels in the gaintable.

5.107.3.5 nbands() `unsigned int DynComp::gaintable_t::nbands () const [inline]`

Return number of frequency bands.

5.107.3.6 nchannels() `unsigned int DynComp::gaintable_t::nchannels () const [inline]`

Return number of audio channels.

5.107.3.7 get_iofun() `std::vector< std::vector< mha_real_t > > gaintable_t::get↔`
`_iofun () const`

Return current input-output function.

5.107.3.8 get_vL() `std::vector< mha_real_t> DynComp::gaintable_t::get_vL () const`
`[inline]`

5.107.3.9 get_vF() `std::vector< mha_real_t> DynComp::gaintable_t::get_vF () const`
[inline]

5.107.4 Member Data Documentation

5.110 example1_t Class Reference

This C++ class implements the simplest example plugin for the step-by-step tutorial.

Inheritance diagram for example1_t:

Public Member Functions

- **example1_t** (**MHA_AC::algo_comm_t** &iac, const std::string &configured_name)
Do-nothing constructor.
- void **release** (void)
Release may be empty.
- void **prepare** (**mhaconfig_t** &signal_info)
Plugin preparation.
- **mha_wave_t** * **process** (**mha_wave_t** *signal)
Signal processing performed by the plugin.

Additional Inherited Members

5.110.1 Detailed Description

This C++ class implements the simplest example plugin for the step-by-step tutorial.

It inherits from **MHAPLugin::plugin_t** (p. 1199) for correct integration in the configuration language interface.

5.110.2 Constructor & Destructor Documentation

5.110.2.1 example1_t() `example1_t::example1_t (`
`MHA_AC::algo_comm_t & iac,`
`const std::string & configured_name) [inline]`

Do-nothing constructor.

The constructor has to take these two arguments, but it does not have to use them. The base class has to be initialized.

5.110.3 Member Function Documentation

5.110.3.1 release() `void example1_t::release (`
`void) [inline], [virtual]`

Release may be empty.

Reimplemented from **MHAPlugin::plugin_t< int >** (p. 1202).

5.110.3.2 prepare() `void example1_t::prepare (`
`mhaconfig_t & signal_info) [inline], [virtual]`

Plugin preparation.

This plugin checks that the input signal has the waveform domain and contains at least one channel

Parameters

<i>signal_info</i>	Structure containing a description of the form of the signal (domain, number of channels, frames per block, sampling rate).
--------------------	---

Implements **MHAPlugin::plugin_t< int >** (p. 1201).

5.110.3.3 process() `mha_wave_t* example1_t::process (mha_wave_t * signal) [inline]`

Signal processing performed by the plugin.

This plugin multiplies the signal in the first audio channel by a factor 0.1.

Parameters

<i>signal</i>	Pointer to the input signal structure.
---------------	--

Returns

Returns a pointer to the input signal structure, with a the signal modified by this plugin. (In-place processing)

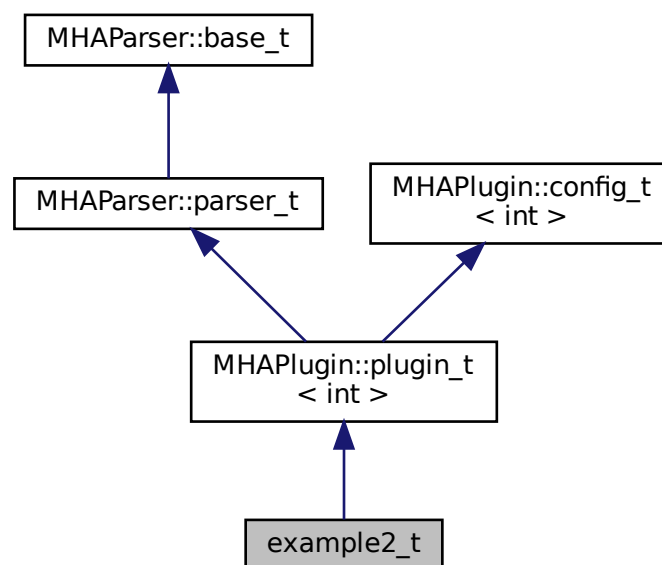

The documentation for this class was generated from the following file:

- **example1.cpp**

5.111 example2_t Class Reference

This C++ class implements the second example plugin for the step-by-step tutorial.

Inheritance diagram for example2_t:

Public Member Functions

- **example2_t** (**MHA_AC::algo_comm_t** &iac, const std::string &configured_name)

This constructor initializes the configuration language variables and inserts them into the openMHA configuration tree.
- void **prepare** (**mhaconfig_t** &signal_info)

Plugin preparation.
- void **release** (void)

Undo restrictions posed in prepare.
- **mha_wave_t** * **process** (**mha_wave_t** *signal)

Signal processing performed by the plugin.

Private Attributes

- **MHAParser::int_t scale_ch**

Index of audio channel to scale.
- **MHAParser::float_t factor**

The scaling factor applied to the selected channel.

Additional Inherited Members

5.111.1 Detailed Description

This C++ class implements the second example plugin for the step-by-step tutorial.

It extends the first example by using configuration language variables to influence the processing.

5.111.2 Constructor & Destructor Documentation

5.111.2.1 example2_t() `example2_t::example2_t (MHA_AC::algo_comm_t & iac, const std::string & configured_name)`

This constructor initializes the configuration language variables and inserts them into the openMHA configuration tree.

5.111.3 Member Function Documentation

5.111.3.1 prepare() `void example2_t::prepare (mhaconfig_t & signal_info) [virtual]`

Plugin preparation.

This plugin checks that the input signal has the waveform domain and contains enough channels.

Parameters

<i>signal_info</i>	Structure containing a description of the form of the signal (domain, number of channels, frames per block, sampling rate).
--------------------	---

Implements **MHAPlugin::plugin_t< int >** (p. 1201).

5.111.3.2 release() `void example2_t::release (void) [virtual]`

Undo restrictions posed in prepare.

Reimplemented from **MHAPlugin::plugin_t< int >** (p. 1202).

5.111.3.3 process() `mha_wave_t * example2_t::process (mha_wave_t * signal)`

Signal processing performed by the plugin.

This plugin multiplies the signal in the selected audio channel by the configured factor.

Parameters

<i>signal</i>	Pointer to the input signal structure.
---------------	--

Returns

Returns a pointer to the input signal structure, with a the signal modified by this plugin. (In-place processing)

5.111.4 Member Data Documentation

5.111.4.1 scale_ch `MHAParser::int_t example2_t::scale_ch [private]`

Index of audio channel to scale.

5.111.4.2 factor `MHAParser::float_t` `example2_t::factor` [private]

The scaling factor applied to the selected channel.

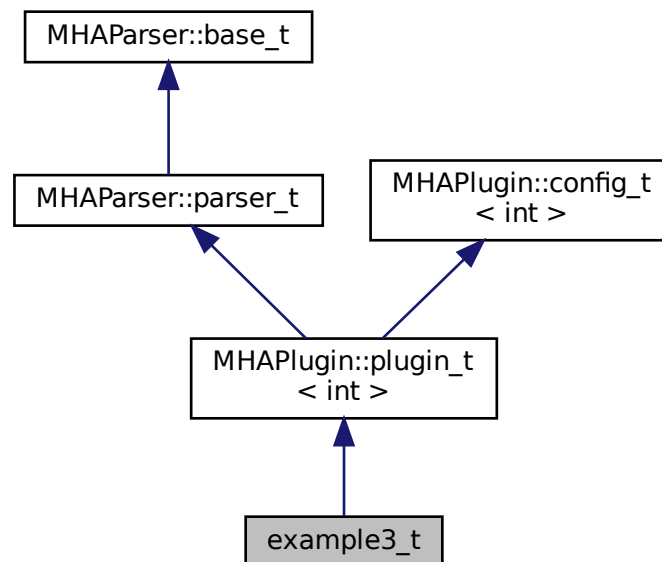

The documentation for this class was generated from the following file:

- `example2.cpp`

5.112 example3_t Class Reference

A Plugin class using the openMHA Event mechanism.

Inheritance diagram for `example3_t`:

Public Member Functions

- `example3_t (MHA_AC::algo_comm_t &iac, const std::string &configured_name)`
This constructor initializes the configuration language variables and inserts them into the openMHA configuration tree.
- `void prepare (mhaconfig_t &signal_info)`
Plugin preparation.
- `void release (void)`
Bookkeeping only.
- `mha_wave_t * process (mha_wave_t *signal)`
Signal processing performed by the plugin.

Private Member Functions

- void **on_scale_ch_writeaccess** ()
- void **on_scale_ch_valuechanged** ()
- void **on_scale_ch_readaccess** ()
- void **on_prereadaccess** ()

Private Attributes

- **MHAParser::int_t scale_ch**
Index of audio channel to scale.
- **MHAParser::float_t factor**
The scaling factor applied to the selected channel.
- **MHAParser::int_mon_t prepared**
Keep Track of the prepare/release calls.
- **MHAEvents::patchbay_t< example3_t > patchbay**
The Event connector.

Additional Inherited Members

5.112.1 Detailed Description

A Plugin class using the openMHA Event mechanism.

This is the third example plugin for the step-by-step tutorial.

5.112.2 Constructor & Destructor Documentation

5.112.2.1 example3_t() `example3_t::example3_t (`
`MHA_AC::algo_comm_t & iac,`
`const std::string & configured_name)`

This constructor initializes the configuration language variables and inserts them into the openMHA configuration tree.

It connects the openMHA Events triggered by these configuration variables to the respective callbacks.

5.112.3 Member Function Documentation

5.112.3.1 on_scale_ch_writeaccess() void example3_t::on_scale_ch_writeaccess ()
[private]

5.112.3.2 on_scale_ch_valuechanged() void example3_t::on_scale_ch_valuechanged ()
[private]

5.112.3.3 on_scale_ch_readaccess() void example3_t::on_scale_ch_readaccess ()
[private]

5.112.3.4 on_prereadaccess() void example3_t::on_prereadaccess () [private]

5.112.3.5 prepare() void example3_t::prepare (
 mhaconfig_t & *signal_info*) [virtual]

Plugin preparation.

This plugin checks that the input signal has the waveform domain and contains enough channels.

Parameters

<i>signal_info</i>	Structure containing a description of the form of the signal (domain, number of channels, frames per block, sampling rate).
--------------------	---

Implements **MHAPlugin::plugin_t< int >** (p. 1201).

5.112.3.6 release() `void example3_t::release (`
`void) [virtual]`

Bookkeeping only.

Reimplemented from **MHAPLugin::plugin_t< int >** (p. 1202).

5.112.3.7 process() `mha_wave_t * example3_t::process (`
`mha_wave_t * signal)`

Signal processing performed by the plugin.

This plugin multiplies the signal in the selected audio channel by the configured factor.

Parameters

<i>signal</i>	Pointer to the input signal structure.
---------------	--

Returns

Returns a pointer to the input signal structure, with a the signal modified by this plugin.
(In-place processing)

5.112.4 Member Data Documentation

5.112.4.1 scale_ch `MHAParser::int_t example3_t::scale_ch [private]`

Index of audio channel to scale.

5.112.4.2 factor `MHAParser::float_t example3_t::factor [private]`

The scaling factor applied to the selected channel.

5.112.4.3 prepared `MHAParser::int_mon_t` `example3_t::prepared` [private]

Keep Track of the prepare/release calls.

5.112.4.4 patchbay `MHAEvents::patchbay_t< example3_t>` `example3_t::patchbay` [private]

The Event connector.

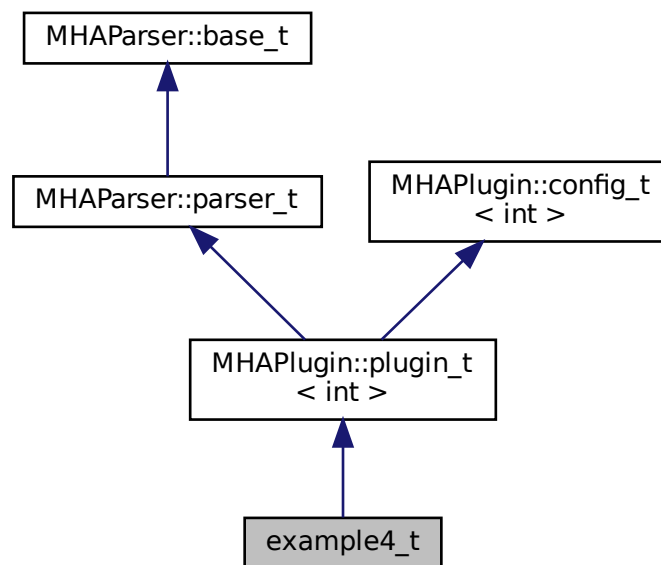

The documentation for this class was generated from the following file:

- `example3.cpp`

5.113 example4_t Class Reference

A Plugin class using the spectral signal.

Inheritance diagram for `example4_t`:

Public Member Functions

- **example4_t** (**MHA_AC::algo_comm_t** &iac, const std::string &configured_name)
This constructor initializes the configuration language variables and inserts them into the openMHA configuration tree.
- void **prepare** (**mhaconfig_t** &signal_info)
Plugin preparation.
- void **release** (void)
Bookkeeping only.
- **mha_spec_t** * **process** (**mha_spec_t** *signal)
Signal processing performed by the plugin.

Private Member Functions

- void **on_scale_ch_writeaccess** ()
- void **on_scale_ch_valuechanged** ()
- void **on_scale_ch_readaccess** ()
- void **on_prereadaccess** ()

Private Attributes

- **MHAParser::int_t scale_ch**
Index of audio channel to scale.
- **MHAParser::float_t factor**
The scaling factor applied to the selected channel.
- **MHAParser::int_mon_t prepared**
Keep Track of the prepare/release calls.
- **MHAEvents::patchbay_t** < **example4_t** > **patchbay**
The Event connector.

Additional Inherited Members

5.113.1 Detailed Description

A Plugin class using the spectral signal.

This is the fourth example plugin for the step-by-step tutorial.

5.113.2 Constructor & Destructor Documentation

5.113.2.1 example4_t() `example4_t::example4_t (`
 `MHA_AC::algo_comm_t & iac,`
 `const std::string & configured_name)`

This constructor initializes the configuration language variables and inserts them into the openMHA configuration tree.

It connects the openMHA Events triggered by these configuration variables to the respective callbacks.

5.113.3 Member Function Documentation

5.113.3.1 on_scale_ch_writeaccess() `void example4_t::on_scale_ch_writeaccess ()`
[private]

5.113.3.2 on_scale_ch_valuechanged() `void example4_t::on_scale_ch_valuechanged (`
`) [private]`

5.113.3.3 on_scale_ch_readaccess() `void example4_t::on_scale_ch_readaccess ()`
[private]

5.113.3.4 on_prereadaccess() `void example4_t::on_prereadaccess () [private]`

5.113.3.5 prepare() `void example4_t::prepare (`
 `mhaconfig_t & signal_info) [virtual]`

Plugin preparation.

This plugin checks that the input signal has the spectral domain and contains enough channels.

Parameters

<i>signal_info</i>	Structure containing a description of the form of the signal (domain, number of channels, frames per block, sampling rate).
--------------------	---

Implements **MHAPlugin::plugin_t< int >** (p. 1201).

5.113.3.6 release() `void example4_t::release (void) [virtual]`

Bookkeeping only.

Reimplemented from **MHAPlugin::plugin_t< int >** (p. 1202).

5.113.3.7 process() `mha_spec_t * example4_t::process (mha_spec_t * signal)`

Signal processing performed by the plugin.

This plugin multiplies the spectral signal in the selected audio channel by the configured factor.

Parameters

<i>signal</i>	Pointer to the input signal structure.
---------------	--

Returns

Returns a pointer to the input signal structure, with a the signal modified by this plugin. (In-place processing)

5.113.4 Member Data Documentation

5.113.4.1 scale_ch `MHAParser::int_t example4_t::scale_ch [private]`

Index of audio channel to scale.

5.113.4.2 factor `MHAParser::float_t example4_t::factor [private]`

The scaling factor applied to the selected channel.

5.113.4.3 prepared `MHAParser::int_mon_t example4_t::prepared [private]`

Keep Track of the prepare/release calls.

5.113.4.4 patchbay `MHAEvents::patchbay_t< example4_t> example4_t::patchbay [private]`

The Event connector.

The documentation for this class was generated from the following file:

5.121 fftfbpow::fftfbpow_interface_t Class Reference

Interface class for fftfbpow plugin.

Inheritance diagram for `fftfbpow::fftfbpow_interface_t`:

Public Member Functions

- **fftfbpow_interface_t** (`MHA_AC::algo_comm_t &iac`, `const std::string &configured_name`)
Constructor with standard MHA constructor parameters.
- void **prepare** (`mhaconfig_t &tf`)
Standard MHA plugin prepare function.
- `mha_spec_t *` **process** (`mha_spec_t *s`)
Standard MHA plugin process fct.

Private Member Functions

- void `update_cfg ()`
Constructs new runtime configuration in thread-safe manner.

Private Attributes

- `std::string name`
Configured name of this plugin instance.
- `MHAEvents::patchbay_t< fftfbpow_interface_t > patchbay`
Patchbay to connect to MHA configuration interface.

Additional Inherited Members

5.121.1 Detailed Description

Interface class for `fftfbpow` plugin.

5.121.2 Constructor & Destructor Documentation

5.121.2.1 `fftfbpow_interface_t()` `fftfbpow::fftfbpow_interface_t::fftfbpow_interface_t (MHA_AC::algo_comm_t & iac, const std::string & configured_name)`

Constructor with standard MHA constructor parameters.

Parameters

<code>iac</code>	Handle to algorithm communication variable space
<code>configured_name</code>	Configured name of this plugin instance

5.121.3 Member Function Documentation

5.121.3.1 prepare() `void fftfbpow::fftfbpow_interface_t::prepare (mhaconfig_t & tf) [virtual]`

Standard MHA plugin prepare function.

Ensures that the input is in the frequency domain, calls **update_cfg()** (p. 516) and inserts fbpow into the AC space.

Parameters

<i>tf</i>	Incoming mha configuration structure, contains information about input signal
-----------	---

Implements **MHAPlugin::plugin_t< fftfbpow_t >** (p. 1201).

5.121.3.2 process() `mha_spec_t * fftfbpow::fftfbpow_interface_t::process (mha_spec_t * s)`

Standard MHA plugin process fct.

Polls new config and calls **process()** (p. 516) of the runtime configuration.

Parameters

<i>s</i>	Input spectrum
----------	----------------

Returns

Unchanged input spectrum

5.121.3.3 update_cfg() `void fftfbpow::fftfbpow_interface_t::update_cfg () [private]`

Constructs new runtime configuration in thread-safe manner.

5.121.4 Member Data Documentation

5.121.4.1 name `std::string fftfbpow::fftfbpow_interface_t::name` [private]

Configured name of this plugin instance.

5.121.4.2 patchbay `MHAEvents::patchbay_t< fftfbpow_interface_t> fftfbpow::fftfbpow↔_interface_t::patchbay` [private]

Patchbay to connect to MHA configuration interface.

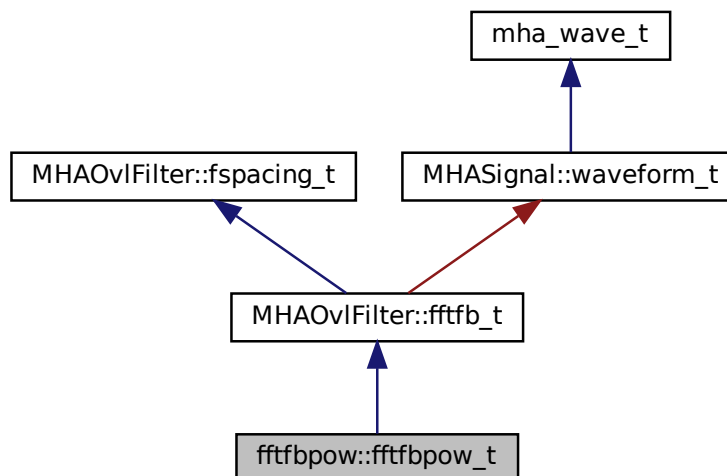

The documentation for this class was generated from the following file:

- `fftfbpow.cpp`

5.122 `fftfbpow::fftfbpow_t` Class Reference

Run time configuration for the `fftfbpow` plugin.

Inheritance diagram for `fftfbpow::fftfbpow_t`:

Public Member Functions

- `fftfbpow_t (MHAOvfFilter::fftfb_vars_t &vars, unsigned int nch, unsigned int nfft, mha_real_t fs, MHA_AC::algo_comm_t &ac, std::string name)`
Constructor of the run time configuration.

Public Attributes

- **MHA_AC::waveform_t fbpow**

AC variable containing the estimated power in each frequency band.

Additional Inherited Members

5.122.1 Detailed Description

Run time configuration for the fftfbpow plugin.

5.122.2 Constructor & Destructor Documentation

5.122.2.1 fftfbpow_t() `fftfbpow::fftfbpow_t::fftfbpow_t (`
`MHAOvlFilter::fftfb_vars_t & vars,`
`unsigned int nch,`
`unsigned int nfft,`
`mha_real_t fs,`
`MHA_AC::algo_comm_t & ac,`
`std::string name)`

Constructor of the run time configuration.

Parameters

<i>vars</i>	Set of configuration variables for FFT-based overlapping filters
<i>nch</i>	Number of audio input channels
<i>nfft</i>	Length of FFT
<i>fs</i>	Sampling rate
<i>ac</i>	AC space
<i>name</i>	Configured name of plugin interface, used as prefix for AC variable names

5.122.3 Member Data Documentation

5.122.3.1 `fbpow` `MHA_AC::waveform_t` `fftfbpow::fftfbpow_t::fbpow`

AC variable containing the estimated power in each frequency band.

The documentation for this class was generated from the following file:

- `fftfbpow.cpp`

5.123 `fftfilter::fftfilter_t` Class Reference

Public Member Functions

- `fftfilter_t` (const `MHAParser::mfloat_t` &`irs`, const unsigned int & `fragsize`, const unsigned int & `channels`, const unsigned int & `fftlent`)
Initialization of new run-time configuration from channel-specific impulse responses.
- `mha_wave_t` * `process` (`mha_wave_t` *)

Private Attributes

- unsigned int `irslen`
Length of the longest impulse response applied.
- unsigned int `fragsize`
The block size (samples per channel) for waveform audio data.
- unsigned int `fftlent`
FFT length used for filtering.
- unsigned int `channels`
Number of prepared audio channels processed by this MHA plugin.
- `MHAFilter::fftfilter_t` `fftfilt`
The filter object.

5.123.1 Detailed Description

Run-time configuration class for the `fftfilter` MHA plugin.

5.123.2 Constructor & Destructor Documentation

5.123.2.1 `fftfilter_t()` `fftfilter::fftfilter_t::fftfilter_t` (
const `MHAParser::mfloat_t` & `irs`,
const unsigned int & `fragsize_`,
const unsigned int & `channels_`,
const unsigned int & `fftlent_`)

Initialization of new run-time configuration from channel-specific impulse responses.

Parameters

<i>irs</i>	The matrix containing the impulse responses (one response per channel, or the same response for every channels) as set by the parser.
<i>fragsize</i> ↔ —	The block size (samples per channel) for waveform audio data
<i>channels</i> ↔ —	The number of prepared audio channels for this MHA plugin.
<i>ftlen</i> —	FFT length used for filtering

5.123.3 Member Function Documentation

5.123.3.1 process() `mha_wave_t * fftfilter::fftfilter_t::process (mha_wave_t * s)`

Let fftfiler object handle the filtering

5.123.4 Member Data Documentation

5.123.4.1 irslen `unsigned int fftfilter::fftfilter_t::irslen [private]`

Length of the longest impulse response applied.

5.123.4.2 fragsize `unsigned int fftfilter::fftfilter_t::fragsize [private]`

The block size (samples per channel) for waveform audio data.

5.123.4.3 ftlen `unsigned int fftfilter::fftfilter_t::ftlen [private]`

FFT length used for filtering.

5.123.4.4 channels `unsigned int fftfilter::fftfilter_t::channels [private]`

Number of prepared audio channels processed by this MHA plugin.

5.123.4.5 fftfilt `MHAFilter::fftfilter_t fftfilter::fftfilter_t::fftfilt [private]`

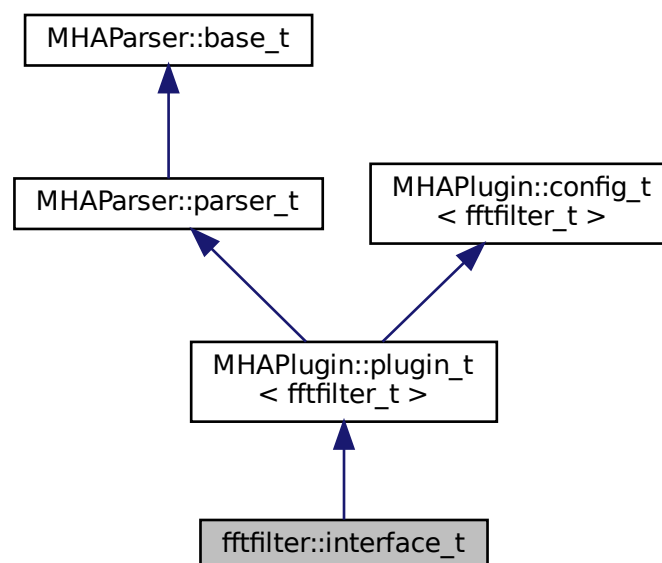

The filter object.

5.125.1 Constructor & Destructor Documentation

5.125.1.1 fftfb_interface_t() `fftfilterbank::fftfb_interface_t::fftfb_interface_t (MHA_AC::algo_comm_t & iac, const std::string & configured_name)`

Default values are set and MHA configuration variables registered into the parser.

Parameters

<i>ac</i>	algorithm communication handle
<i>th</i>	chain name
<i>al</i>	algorithm name

5.125.2 Member Function Documentation

5.125.2.1 prepare() `void fftfilterbank::fftfb_interface_t::prepare (mhaconfig_t & tf) [virtual]`

Prepare all variables for processing.

In this function, all variables are initialised and the filter shapes for each band are calculated. The filter shapes $W(f)$ are defined as

$$W(f) = W(T(S(f))) = W(x), \quad x = T(S(f)) = T(\hat{f}),$$

$W(x)$ being a symmetric window function in the interval $[-1, 1]$ and $S(f)$ the transformation from the linear scale to the given frequency scale (see functions in FreqScaleFun). The function $T(\hat{f})$ transforms the frequency range between the center frequencies $[\hat{f}_{k-1}, \hat{f}_k]$ and $[\hat{f}_k, \hat{f}_{k+1}]$ into the interval $[-1, 0]$ and $[0, 1]$, respectively. This function is realised by the function `linscale()`.

Parameters

<i>tf</i>	Channel configuration
-----------	-----------------------

Implements `MHAPLugin::plugin_t< fftfb_plug_t >` (p. 1201).

5.125.2.2 release() `void fftfilterbank::fftfb_interface_t::release () [virtual]`

Reimplemented from `MHAPLugin::plugin_t< fftfb_plug_t >` (p. 1202).

5.127 fshift::fshift_config_t Class Reference

fshift runtime config class

Public Member Functions

- `fshift_config_t` (`fshift_t` const *const plug)
C'tor of the fshift plugin runtime configuration class.
- `~fshift_config_t` ()=default
- `mha_spec_t` * `process` (`mha_spec_t` *)

Private Attributes

- const unsigned int **kmin**
FFT bin corresponding to fmin.
- const unsigned **kmax**
FFT bin corresponding to fmax.
- const int **df**
Frequency shift expressed in FFT bins.
- const **mha_complex_t delta_phi**
Phase advance per fft frame.
- **mha_complex_t delta_phi_total**
Sum of all phase advances.

5.127.1 Detailed Description

fshift runtime config class

5.127.2 Constructor & Destructor Documentation

5.127.2.1 fshift_config_t() `fshift::fshift_config_t::fshift_config_t (fshift_t const *const plug) [explicit]`

C'tor of the fshift plugin runtime configuration class.

Parameters

<i>plug</i>	ptr to the plugin interface class. Configuration information is given this way to keep the argument list small.
-------------	---

5.127.2.2 ~fshift_config_t() `fshift::fshift_config_t::~~fshift_config_t () [default]`

5.127.3 Member Function Documentation

5.127.3.1 process() `mha_spec_t * fshift::fshift_config_t::process (mha_spec_t * in)`

5.127.4 Member Data Documentation

5.127.4.1 kmin `const unsigned int fshift::fshift_config_t::kmin [private]`

FFT bin corresponding to fmin.

5.127.4.2 kmax `const unsigned fshift::fshift_config_t::kmax [private]`

FFT bin corresponding to fmax.

5.127.4.3 df `const int fshift::fshift_config_t::df [private]`

Frequency shift expressed in FFT bins.

5.127.4.4 delta_phi `const mha_complex_t fshift::fshift_config_t::delta_phi [private]`

Phase advance per fft frame.

5.127.4.5 delta_phi_total `mha_complex_t fshift::fshift_config_t::delta_phi_total [private]`

Sum of all phase advances.

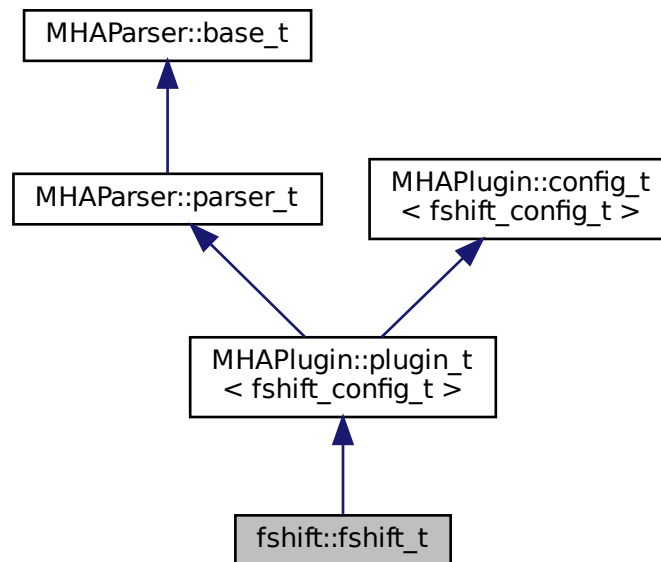

The documentation for this class was generated from the following files:

- **fshift.hh**
- **fshift.cpp**

5.128 fshift::fshift_t Class Reference

fshift plugin interface class

Inheritance diagram for fshift::fshift_t:

Public Member Functions

- **fshift_t** (**MHA_AC::algo_comm_t** &iac, const std::string &configured_name)
Constructs our plugin.
- **~fshift_t** ()
- **mha_spec_t * process** (**mha_spec_t ***)
Checks for the most recent configuration and defers processing to it.
- void **prepare** (**mhaconfig_t** &)
Plugin preparation.
- void **release** (void)
- **mha_real_t fmin** () const
- **mha_real_t fmax** () const
- **mha_real_t df** () const

Private Member Functions

- void **update_cfg** ()

Private Attributes

- **MHAEvents::patchbay_t< fshift_t > patchbay**
patch bay for connecting configuration parser events with local member functions:
- **MHAParser::float_t m_fmin**
- **MHAParser::float_t m_fmax**
upper boundary for frequency shifter
- **MHAParser::float_t m_df**
Shift frequency in Hz.

5.128.1 Detailed Description

fshift plugin interface class

5.128.2 Constructor & Destructor Documentation

5.128.2.1 fshift_t() `fshift::fshift_t::fshift_t (MHA_AC::algo_comm_t & iac, const std::string & configured_name)`

Constructs our plugin.

5.128.2.2 ~fshift_t() `fshift::fshift_t::~~fshift_t ()`

5.128.3 Member Function Documentation

5.128.3.1 process() `mha_spec_t * fshift::fshift_t::process (mha_spec_t * signal)`

Checks for the most recent configuration and defers processing to it.

5.128.3.2 prepare() `void fshift::fshift_t::prepare (mhaconfig_t & signal_info) [virtual]`

Plugin preparation.

An opportunity to validate configuration parameters before instantiating a configuration.

Parameters

<i>signal_info</i>	Structure containing a description of the form of the signal (domain, number of channels, frames per block, sampling rate).
--------------------	---

Implements **MHAPlugin::plugin_t< fshift_config_t >** (p. 1201).

5.128.3.3 release() `void fshift::fshift_t::release (void) [inline], [virtual]`

Reimplemented from **MHAPlugin::plugin_t< fshift_config_t >** (p. 1202).

5.128.3.4 fmin() `mha_real_t fshift::fshift_t::fmin () const [inline]`

5.128.3.5 fmax() `mha_real_t fshift::fshift_t::fmax () const [inline]`

5.128.3.6 df() `mha_real_t fshift::fshift_t::df () const [inline]`

5.128.3.7 update_cfg() `void fshift::fshift_t::update_cfg () [private]`

5.128.4 Member Data Documentation

5.128.4.1 patchbay `MHAEvents::patchbay_t< fshift_t> fshift::fshift_t::patchbay [private]`

patch bay for connecting configuration parser events with local member functions:

5.128.4.2 m_fmin `MHAParser::float_t` `fshift::fshift_t::m_fmin` [private]

5.128.4.3 m_fmax `MHAParser::float_t` `fshift::fshift_t::m_fmax` [private]

upper boundary for frequency shifter

5.128.4.4 m_df `MHAParser::float_t` `fshift::fshift_t::m_df` [private]

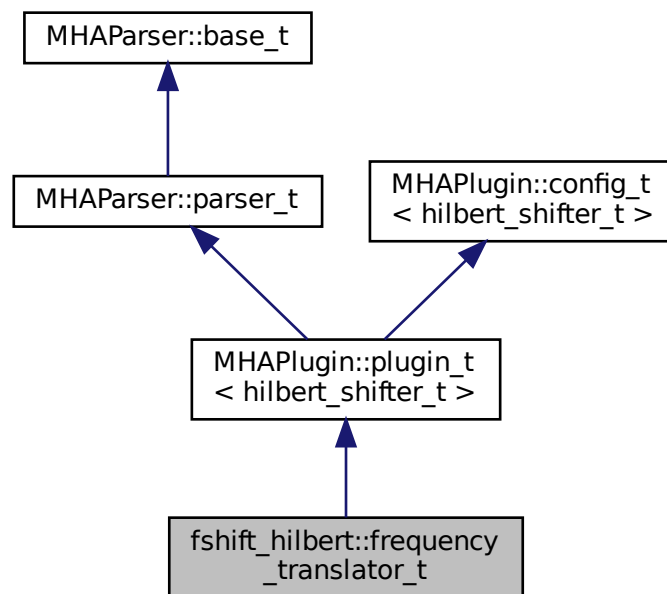

Shift frequency in Hz.

The documentation for this class was generated from the following files:

- **fshift.hh**

5.135.1 Constructor & Destructor Documentation

5.135 gsc_adaptive_stage::gsc_adaptive_stage Class Reference 559

5.135.1.1 gsc_adaptive_stage() `gsc_adaptive_stage::gsc_adaptive_stage::gsc_adaptive←
_stage (`

```
    MHA_AC::algo_comm_t & ac,  
    const mhaconfig_t in_cfg,  
    int lenOldSamps,  
    bool doCircularComp,  
    float mu,  
    float alp,  
    bool useVAD,  
    const std::string & vadName_ )
```

Ctor of the rt processing class.

Parameters

<i>ac</i>	Handle to AC space
<i>in_cfg</i>	Input signal configuration
<i>lenOldSamps</i>	How many old samples to buffer
<i>doCircularComp</i>	Compensate for circular convolution?
<i>mu</i>	Scalar coefficient for gradient
<i>alp</i>	Autoregressive coefficient for estimating PSD
<i>useVAD</i>	Use voice activity detection?
<i>vadName_</i>	Name of the VAD AC variable

5.135.1.2 ~gsc_adaptive_stage() `gsc_adaptive_stage::gsc_adaptive_stage::~~gsc←
adaptive_stage () [default]`

5.135.2 Member Function Documentation

5.135.2.1 process() `mha_wave_t * gsc_adaptive_stage::gsc_adaptive_stage::process (`
 `mha_wave_t * wavin)`

Processing callback.

Parameters

<i>wavin</i>	input signal
--------------	--------------

Returns

Returns a pointer to the output signal

5.135.2.2 insert() `void gsc_adaptive_stage::gsc_adaptive_stage::insert () [private]`

Re-insert all AC variables into the AC space.

5.135.3 Member Data Documentation

5.135.3.1 ac `MHA_AC::algo_comm_t& gsc_adaptive_stage::gsc_adaptive_stage::ac [private]`

Handle to AC space.

5.135.3.2 lenOldSamps `unsigned int gsc_adaptive_stage::gsc_adaptive_stage::len↔
OldSamps [private]`

Number of old samples to buffer.

5.135.3.3 lenNewSamps `unsigned int gsc_adaptive_stage::gsc_adaptive_stage::len↔
NewSamps [private]`

Number of new samples.

5.135.3.4 bufSize `unsigned int gsc_adaptive_stage::gsc_adaptive_stage::bufSize
[private]`

Total buffer size.

Must be `lenOldSamps+lenNewSamps`

5.135 gsc_adaptive_stage::gsc_adaptive_stage Class Reference561

5.135.3.5 frac_old float gsc_adaptive_stage::gsc_adaptive_stage::frac_old [private]

Fraction of new samples to total buffer size.

5.135.3.6 mha_fft mha_fft_t gsc_adaptive_stage::gsc_adaptive_stage::mha_fft [private]

FFT handle.

5.135.3.7 nfreq unsigned int gsc_adaptive_stage::gsc_adaptive_stage::nfreq [private]

Number of frequency bins.

5.135.3.8 nchan unsigned int gsc_adaptive_stage::gsc_adaptive_stage::nchan [private]

Number of channels in input signal.

5.135.3.9 desired_chan unsigned int gsc_adaptive_stage::gsc_adaptive_stage::desired←
_chan [private]

Channel index containing the desired response.

Always last channel by convention

5.135.3.10 doCircularComp bool gsc_adaptive_stage::gsc_adaptive_stage::doCircular←
Comp [private]

Whether to compensate for circular convolution.

5.135.3.11 mu float gsc_adaptive_stage::gsc_adaptive_stage::mu [private]

Linear coefficient for gradient.

5.135.3.12 alp float gsc_adaptive_stage::gsc_adaptive_stage::alp [private]

Autoregressive coefficient for estimating PSD.

5.135.3.13 useVAD bool gsc_adaptive_stage::gsc_adaptive_stage::useVAD [private]

Whether to use VAD.

5.135.3.14 vadName std::string gsc_adaptive_stage::gsc_adaptive_stage::vadName [private]

Name of VAD AC variable.

5.135.3.15 X MHA_AC::waveform_t gsc_adaptive_stage::gsc_adaptive_stage::x [private]

Buffered input signal.

5.135.3.16 X MHA_AC::spectrum_t gsc_adaptive_stage::gsc_adaptive_stage::X [private]

FFT of the buffered input signal.

5.135.3.17 W MHA_AC::spectrum_t gsc_adaptive_stage::gsc_adaptive_stage::W [private]

Time-varying filter.

5.135 gsc_adaptive_stage::gsc_adaptive_stage Class Reference563

5.135.3.18 Y `MHA_AC::spectrum_t` `gsc_adaptive_stage::gsc_adaptive_stage::Y` [private]

Filter output, frequency domain.

5.135.3.19 y `MHA_AC::waveform_t` `gsc_adaptive_stage::gsc_adaptive_stage::y` [private]

Filter output, time domain.

5.135.3.20 d `MHA_AC::waveform_t` `gsc_adaptive_stage::gsc_adaptive_stage::d` [private]

Desired response.

5.135.3.21 e `MHA_AC::waveform_t` `gsc_adaptive_stage::gsc_adaptive_stage::e` [private]

Error signal, time domain.

5.135.3.22 E `MHA_AC::spectrum_t` `gsc_adaptive_stage::gsc_adaptive_stage::E` [private]

Error signal, frequency domain.

5.135.3.23 E2 `MHA_AC::spectrum_t` `gsc_adaptive_stage::gsc_adaptive_stage::E2` [private]

Error spectrum multiplied by input spectrum: $E2=X*E$.

5.135.3.24 grad `MHA_AC::waveform_t` `gsc_adaptive_stage::gsc_adaptive_stage::grad`
[private]

Gradient.

5.135.3.25 Grad `MHA_AC::spectrum_t gsc_adaptive_stage::gsc_adaptive_stage::Grad`
[private]

FT of the gradient.

5.135.3.26 e_out `MHA_AC::waveform_t gsc_adaptive_stage::gsc_adaptive_stage::e_out`
[private]

Error signal.

5.135.3.27 P `MHA_AC::waveform_t gsc_adaptive_stage::gsc_adaptive_stage::P` [private]

Signal power estimate.

5.135.3.28 Psum `MHA_AC::waveform_t gsc_adaptive_stage::gsc_adaptive_stage::Psum`
[private]

Signal power estimate, summed over all channels.

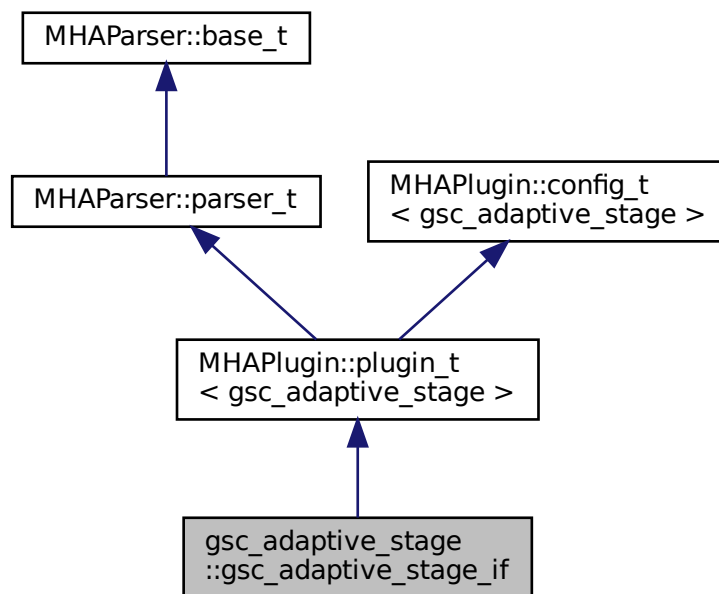

The documentation for this class was generated from the following files:

Additional Inherited Members

5.136.1 Detailed Description

Plugin interface class.

5.136.2 Constructor & Destructor Documentation

5.136.2.1 gsc_adaptive_stage_if() `gsc_adaptive_stage::gsc_adaptive_stage_if::gsc_adaptive_stage_if (
MHA_AC::algo_comm_t & iac,
const std::string & configured_name)`

Constructs the interface to the adaptive filter plugin.

Parameters

<i>ac</i>	Handle to the ac space
-----------	------------------------

5.136.2.2 ~gsc_adaptive_stage_if() `gsc_adaptive_stage::gsc_adaptive_stage_if↔`

```
::~gsc_adaptive_stage_if ( ) [default]
```

5.136.3 Member Function Documentation

5.136.3.1 `process()` `mha_wave_t * gsc_adaptive_stage::gsc_adaptive_stage_if::process (mha_wave_t * signal)`

This plugin implements noise reduction using spectral subtraction: By nonnegative subtraction from the output magnitude of the estimated noise magnitude spectrum.

Parameters

<i>signal</i>	Pointer to the input signal structure.
---------------	--

Returns

Returns a pointer to the input signal structure, with a the signal modified by this plugin.

5.136.3.2 `prepare()` `void gsc_adaptive_stage::gsc_adaptive_stage_if::prepare (mhaconfig_t & signal_info) [virtual]`

Plugin preparation.

This plugin checks that the input signal has the spectral domain and contains at least one channel

Parameters

<i>signal_info</i>	Structure containing a description of the form of the signal (domain, number of channels, frames per block, sampling rate).
--------------------	---

Implements `MHAPLugin::plugin_t< gsc_adaptive_stage >` (p. [1201](#)).

5.136.3.3 release() `void gsc_adaptive_stage::gsc_adaptive_stage_if::release (void) [inline], [virtual]`

Reimplemented from **MHAPugin::plugin_t< gsc_adaptive_stage >** (p. 1202).

5.136.3.4 update_cfg() `void gsc_adaptive_stage::gsc_adaptive_stage_if::update_cfg () [private]`

Update the rt config.

5.136.3.5 on_model_param_valuechanged() `void gsc_adaptive_stage::gsc_adaptive_↔_stage_if::on_model_param_valuechanged () [private]`

5.136.4 Member Data Documentation

 unsigned *ord*,
 const std::vector< **mha_complex_t** > & *_coeff*,
 const std::vector< **mha_complex_t** > & *_norm_phase*) [inline]

Create a configuration for Gammatone Filterbank Analyzer.

Parameters

<i>ch</i>	Number of Audio channels.
<i>frames</i>	Number of Audio frames per chunk.
<i>ord</i>	The order of the gammatone filters.
<i>_coeff</i>	Complex gammatone filter coefficients.
<i>_norm_phase</i>	Normalization and phase correction factors.

5.137.2.2 `~gtfb_analyzer_cfg_t()` `gtfb_analyzer::gtfb_analyzer_cfg_t::~~gtfb_analyzer↔_cfg_t () [inline]`

5.137.3 Member Function Documentation

5.137.3.1 `bands()` `unsigned gtfb_analyzer::gtfb_analyzer_cfg_t::bands () const [inline]`

Each band is split into this number of bands.

5.137.3.2 `channels()` `unsigned gtfb_analyzer::gtfb_analyzer_cfg_t::channels () const [inline]`

The number of separate audio channels.

5.137.3.3 `frames()` `unsigned gtfb_analyzer::gtfb_analyzer_cfg_t::frames () const [inline]`

The number of frames in one chunk.

5.137.3.4 states() `mha_complex_t* gtfb_analyzer::gtfb_analyzer_cfg_t::states (`
 `unsigned channel,`
 `unsigned band) [inline]`

Returns pointer to filter states for that band.

5.137.3.5 cvalue() `mha_complex_t& gtfb_analyzer::gtfb_analyzer_cfg_t::cvalue (`
 `unsigned frame,`
 `unsigned channel,`
 `unsigned band) [inline]`

5.137.4 Member Data Documentation

5.137.4.1 order `unsigned gtfb_analyzer::gtfb_analyzer_cfg_t::order`

The order of the gammatone filters.

5.137.4.2 coeff `std::vector< mha_complex_t> gtfb_analyzer::gtfb_analyzer_cfg_t↔`
`::coeff`

The complex coefficients of the gammatone filter bands.

5.137.4.3 norm_phase `std::vector< mha_complex_t> gtfb_analyzer::gtfb_analyzer_↔`
`cfg_t::norm_phase`

Combination of normalization and phase correction factor.

5.137.4.4 `s_out` `mha_wave_t` `gtfb_analyzer::gtfb_analyzer_cfg_t::s_out`

Storage for the (complex) output signal.

Each of the real input audio channels is split into frequency bands with complex time signal output. The split complex time signal is again stored in a `mha_wave_t` (p. 894) buffer. Each complex time signal is stored as adjacent real and imaginary channels. Complex output from one source channel is stored in adjacent complex output channels.

Example: If the input has 2 channels `ch0 ch1`, and `gtfb_analyzer` (p. 98) splits into 3 bands `b0 b1 b2`, then the order of output channels in `s_out` is: `ch0_b0_real ch0_b0_imag ch0_b1_real ch0_b1_imag ch0_b2_real ch0_b2_imag ch1_b0_real ch1_b1_imag ch1_b1_real ch1_b1_↔ imag ch1_b2_real ch1_b2_imag`

5.137.4.5 `state` `std::vector< mha_complex_t >` `gtfb_analyzer::gtfb_analyzer_cfg_t↔ ::state`

Storage for Filter state.

Holds `channels()` (p. 571) * `bands()` (p. 571) * order complex filter states. Layout↔
: `state[(bands())*channel+band]*order+stage]`

5.139.1 Detailed Description

Configuration for Gammatone Filterbank SIMD Analyzer.

5.139.2 Constructor & Destructor Documentation

5.139.2.1 `gtfb_simd_cfg_t()` [1/3] `gtfb_simd_cfg_t::gtfb_simd_cfg_t (`
`gtfb_simd_cfg_t &&) [delete]`

5.139.2.2 `gtfb_simd_cfg_t()` [2/3] `gtfb_simd_cfg_t::gtfb_simd_cfg_t (`
`const gtfb_simd_cfg_t &) [delete]`

5.139.2.3 `gtfb_simd_cfg_t()` [3/3] `gtfb_simd_cfg_t::gtfb_simd_cfg_t (`
`unsigned ch,`
`unsigned frames,`
`unsigned ord,`
`const std::vector< mha_complex_t > & _coeff,`
`const std::vector< mha_complex_t > & _norm_phase) [inline]`

Create a configuration for Gammatone Filterbank Analyzer.

Parameters

<i>ch</i>	Number of Audio channels.
<i>frames</i>	Number of Audio frames per chunk.
<i>ord</i>	The order of the gammatone filters.
<i>_coeff</i>	Complex gammatone filter coefficients.
<i>_norm_phase</i>	Normalization and phase correction factors.

5.139.2.4 `~gtfb_simd_cfg_t()` `gtfb_simd_cfg_t::~~gtfb_simd_cfg_t () [inline]`

5.139.3 Member Function Documentation

5.139.3.1 `get_bands()` `unsigned gtfb_simd_cfg_t::get_bands () const [inline]`

Each band is split into this number of bands.

5.139.3.2 `get_channels()` `unsigned gtfb_simd_cfg_t::get_channels () const [inline]`

The number of separate audio channels.

5.139.3.3 get_frames() `unsigned gtfb_simd_cfg_t::get_frames () const [inline]`

The number of frames in one chunk.

5.139.3.4 operator=() [1/2] `gtfb_simd_cfg_t& gtfb_simd_cfg_t::operator= (gtfb_simd_cfg_t &&) [delete]`

5.139.3.5 operator=() [2/2] `gtfb_simd_cfg_t& gtfb_simd_cfg_t::operator= (const gtfb_simd_cfg_t &) [delete]`

5.139.3.6 process() `mha_wave_t* gtfb_simd_cfg_t::process (mha_wave_t * s_in) [inline]`

5.139.4 Member Data Documentation

5.139.4.1 order `unsigned gtfb_simd_cfg_t::order [private]`

The order of the gammatone filters.

5.139.4.2 bands `unsigned gtfb_simd_cfg_t::bands [private]`

Number of frequency bands per channel.

5.139.4.3 channels `unsigned gtfb_simd_cfg_t::channels [private]`

Number of input audio channels.

5.139.4.4 bandsXchannels unsigned gtfb_simd_cfg_t::bandsXchannels [private]

Product of bands and channels.

5.139.4.5 norm_phase std::vector< mha_complex_t> gtfb_simd_cfg_t::norm_phase [private]

Combination of normalization and phase correction factor.

5.139.4.6 rinputs float* gtfb_simd_cfg_t::rinputs [private]

input signal (1 sample) multiplied with norm_phase

5.139.4.7 iinputs float* gtfb_simd_cfg_t::iinputs [private]

5.139.4.8 rcoefficients float* gtfb_simd_cfg_t::rcoefficients [private]

The complex coefficients of the gammatone filter bands.

5.139.4.9 icoefficients float* gtfb_simd_cfg_t::icoefficients [private]

5.139.4.10 rstates float* gtfb_simd_cfg_t::rstates [private]

Storage for Filter state. Holds **channels()** (p. 579) * **bands()** (p. 579) * order complex filter states. Layout: state[stage * bandsXchannels + **bands()** (p. 579)*channel+band]

5.139.4.11 istates float* gtfb_simd_cfg_t::istates [private]

5.139.4.12 sout_buf float* gtfb_simd_cfg_t::sout_buf [private]

output signal buffer, used by s_out.

Contains bandsXchannels * fragsize *2 entries. all real parts come before all complex parts. Order is: channel 0 band 0 real, channel 0 band 1 real, ..., channel 1 band 0 real channel 1 band 1 real, ... channel 0 band 0 imag ... then next sample

5.139.4.13 large_array float* gtfb_simd_cfg_t::large_array [private]

Large float array.

All previous pointers point into this array. Contains 3 unused entries to be able to adjust for alignment.

5.139.4.14 s_out mha_wave_t gtfb_simd_cfg_t::s_out [private]

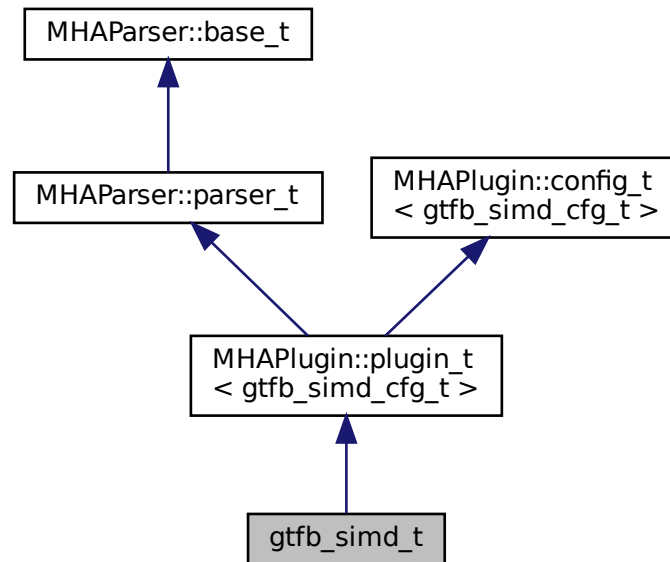

Storage for the (complex) output signal. Each of the real input audio channels is split into frequency bands with complex time signal output. The split complex time signal is again stored in a **mha_wave_t** (p.894) buffer. Each complex time signal is stored as adjacent real and imaginary channels. Complex output from one source channel is stored in adjacent complex output channels.

`unsigned int order,`
`unsigned int pre_stages,`
`unsigned int desired_delay,`
`std::vector< mha_real_t > & vcltass,`
`std::vector< mha_real_t > & resynthesis_gain,`
`const std::string & element_gain_name)`

5.141.3 Member Function Documentation

5.141.3.1 pre_plugin() `mha_wave_t * gtfb_simple_rt_t::pre_plugin (`
`mha_wave_t * s)`

Filter real input signal *s* with the `pre_stages` filter orders in each gammatone filter band.

The real part of the complex output is returned in the return value of the method, the imaginary part is stored into the AC variable.

Parameters

<i>s</i>	real-valued, broad-band input signal
----------	--------------------------------------

Returns

real part of complex-valued output signal after `pre_stages` gammatone filter orders have been applied in each band. Order of output bands in real and imaginary output are: (channel0,band0), (channel0,band1), ..., (cannel1,band0), ...

5.141.3.2 post_plugin() `mha_wave_t * gtfb_simple_rt_t::post_plugin (`
`mha_wave_t * s)`

Post-filter the complex-valued filter-bank signal *s* after it has been processed by the loaded plugin.

The remaining gammatone filter orders are applied to restrict the loaded plugin's output signal to the respective bands. After

Parameters

<i>s</i>	complex-valued, filter-bank signal. This signal is produced by letting the loaded plugin process the output signal of the <code>pre_plugin</code> method.
----------	---

Returns

real part of complex-valued output signal after `pre_stages` gammatone filter orders have been applied in each band. Order of output bands in real and imaginary output are: (channel0,band0), (channel0,band1), ..., (channel1,band0), ...

5.141.3.3 insert_ac_variables() `void gtfb_simple_rt_t::insert_ac_variables ()`

(Re-)insert all AC variables into the AC space.

Must be called during each `prepare()` and `process()` callback of the plugin. For the `process()` callback, this method is called from **pre_plugin()** (p. 586). For the `prepare()` callback, it must be called by the plugin interface.

5.141.3.4 get_gf() `const MHAFilter::gammaflt_t& gtfb_simple_rt_t::get_gf () const [inline]`

Const-accessor to contained gammatone filterbank object.

5.141.3.5 duplicate_vector() `std::vector< mha_real_t > gtfb_simple_rt_t::duplicate↔_vector (const std::vector< mha_real_t > & src, unsigned int nchannels) [static], [private]`

Helper function to repeat the elements in a vector.

Parameters

<i>src</i>	vector to repeat
<i>nchannels</i>	number of times to repeat input vector

Returns

a vector that returns nchannels repetitions of input vector.

5.141.4 Member Data Documentation

5.141.4.1 `_order` `unsigned int gtfb_simple_rt_t::_order [private]`

Total number of gammatone filter orders.

5.141.4.2 `_pre_stages` `unsigned int gtfb_simple_rt_t::_pre_stages [private]`

Number of filter orders applied before the loaded plugin is invoked.

5.141.4.3 `nbands` `unsigned int gtfb_simple_rt_t::nbands [private]`

Number of frequency bands to produce = number of gammatone filters.

5.141.4.4 `imag` `MHA_AC::waveform_t gtfb_simple_rt_t::imag [private]`

Storage for the imaginary part of the filterbank signal.

It is used as the imaginary input signal for the loaded plugin. Furthermore, it is expected that the loaded plugin processes the imaginary part of the data in place.

5.141.4.5 `accf` `MHA_AC::waveform_t gtfb_simple_rt_t::accf [private]`

AC variable to publish the center frequencies of the gammatone filters.

5.141.4.6 acbw `MHA_AC::waveform_t gtfb_simple_rt_t::acbw [private]`

AC variable to publish the bandwidths of the gammatone filters.

5.141.4.7 input `MHASignal::waveform_t gtfb_simple_rt_t::input [private]`

Real part of the filterbank signal.

It is used as the real input signal to the loaded plugin.

5.141.4.8 output `MHASignal::waveform_t gtfb_simple_rt_t::output [private]`

Resynthesized broadband signal, used as the output signal of this plugin.

5.141.4.9 gf `MHAFilter::gammaflt_t gtfb_simple_rt_t::gf [private]`

The gammatone filter bank implementation.

5.141.4.10 cLTASS `MHA_AC::waveform_t gtfb_simple_rt_t::cLTASS [private]`

AC variable to publish band-specific LTASS level correction values.

5.141.4.11 ac_resynthesis_gain `MHA_AC::waveform_t gtfb_simple_rt_t::ac_resynthesis↔
_gain [private]`

AC variable to publish the configured per-frequency resynthesis gains.

5.141.4.12 element_gain_name_ `std::string gtfb_simple_rt_t::element_gain_name_`
[private]

Either an empty string, or the name of an AC variable from which element-wise linear factors are read.

5.141.4.13 _ac `MHA_AC::algo_comm_t& gtfb_simple_rt_t::_ac` [private]

Algorithm Communication Variable space.

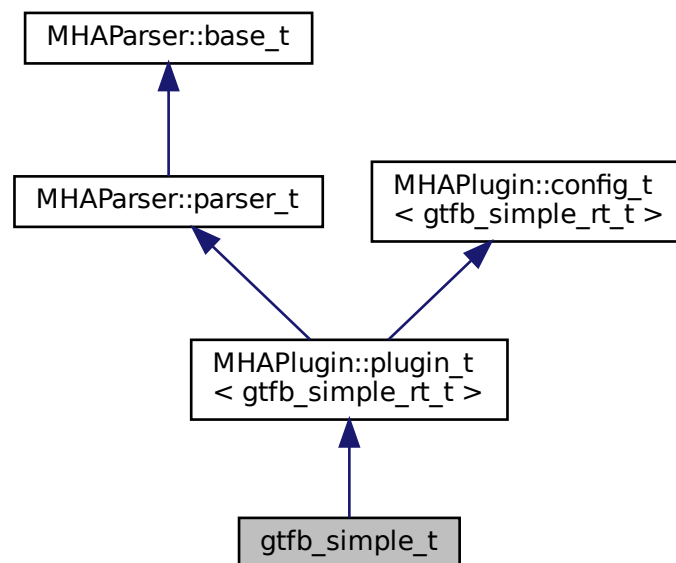

The documentation for this class was generated from the following file:

- `gtfb_simple_bridge.cpp`

5.142 gtfb_simple_t Class Reference

Interface class of `gtfb_simple_bridge` plugin.

Inheritance diagram for `gtfb_simple_t`:

Public Member Functions

- **`gtfb_simple_t`** (`MHA_AC::algo_comm_t` &iac, const std::string &configured_name)
Constructor.
- void **`prepare`** (`mhaconfig_t` &chcfg)
Prepare contained plugin for signal processing.
- void **`release`** ()
Releases contained plugin.
- **`mha_wave_t * process`** (`mha_wave_t *sIn`)
Process the input signal: Computes the filterbank with the pre-stages, calls the loaded plugin for processing of the filterbank signal, and resynthesizes the result to a modified broadband signal.
- void **`setlock`** (bool b)
Locks / unlocks all configuration variables before / after signal processing.

Private Attributes

- **`MHAParser::mhapluginloader_t plug`**
Handle to the loaded plugin.
- **`MHAOvfFilter::fscale_bw_t fscale`**
Object determines the filterbank frequencies.
- **`MHAParser::int_t order`**
total order of gammatone filter
- **`MHAParser::int_t prestages`**
Number of gammatone filter order to process before the loaded plugin processes the filterbank signal.
- **`MHAParser::int_t desired_delay`**
Desired group delay in audio samples.
- **`MHAParser::string_t element_gain_name`**
Number of AC variable to take element-wise gain factors from for resynthesis.
- **`MHAParser::vfloat_mon_t cLTASS`**
Monitoring of LTASS correction values / dB.
- **`MHAParser::vfloat_mon_t resynthesis_gain`**
configured frequency-specific resynthesis gains
- **`MHAParser::string_mon_t gf_internals`**
For tests and debugging: a serialization of the gammatone filter internals.
- std::string **`name_`**
Configured algorithm name, used to name the AC variables.

Additional Inherited Members

5.142.1 Detailed Description

Interface class of `gtfb_simple_bridge` plugin.

5.142.2 Constructor & Destructor Documentation

5.142.2.1 gtfb_simple_t() `gtfb_simple_t::gtfb_simple_t (MHA_AC::algo_comm_t & iac, const std::string & configured_name)`

Constructor.

Registers parser variables.

Parameters

<i>ac</i>	Algorithm Communication Variable space
<i>chain</i>	chain name
<i>algo</i>	configured name of this plugin instance

5.142.3 Member Function Documentation

5.142.3.1 prepare() `void gtfb_simple_t::prepare (mhaconfig_t & chcfg) [virtual]`

Prepare contained plugin for signal processing.

Allocates the runtime configuration instance. Locks all variables.

Implements **MHAPlugin::plugin_t< gtfb_simple_rt_t >** (p. 1201).

5.142.3.2 release() `void gtfb_simple_t::release () [virtual]`

Releases contained plugin.

Unlocks all variables.

Reimplemented from **MHAPlugin::plugin_t< gtfb_simple_rt_t >** (p. 1202).

5.142.3.3 process() `mha_wave_t * gtfb_simple_t::process (mha_wave_t * sIn)`

Process the input signal: Computes the filterbank with the pre-stages, calls the loaded plugin for processing of the filterbank signal, and resynthesizes the result to a modified broadband signal.

5.142.3.4 setlock() `void gtfb_simple_t::setlock (bool b) [inline]`

Locks / unlocks all configuration variables before / after signal processing.

5.142.4 Member Data Documentation

5.142.4.1 plug `MHAParser::mhapluginloader_t gtfb_simple_t::plug [private]`

Handle to the loaded plugin.

5.142.4.2 fscale `MHAovlFilter::fscale_bw_t gtfb_simple_t::fscale [private]`

Object determines the filterbank frequencies.

5.142.4.3 order `MHAParser::int_t gtfb_simple_t::order [private]`

total order of gammatone filter

5.142.4.4 prestages `MHAParser::int_t gtfb_simple_t::prestages [private]`

Number of gammatone filter order to process before the loaded plugin processes the filterbank signal.

5.142.4.5 desired_delay `MHAParser::int_t` `gtfb_simple_t::desired_delay` [private]

Desired group delay in audio samples.

5.142.4.6 element_gain_name `MHAParser::string_t` `gtfb_simple_t::element_gain_↔
name` [private]

Number of AC variable to take element-wise gain factors from for resynthesis.

5.142.4.7 cLTASS `MHAParser::vfloat_mon_t` `gtfb_simple_t::cLTASS` [private]

Monitoring of LTASS correction values / dB.

5.142.4.8 resynthesis_gain `MHAParser::vfloat_mon_t` `gtfb_simple_t::resynthesis_↔
gain` [private]

configured frequency-specific resynthesis gains

5.142.4.9 gf_internals `MHAParser::string_mon_t` `gtfb_simple_t::gf_internals` [private]

For tests and debugging: a serialization of the gammatone filter internals.

5.142.4.10 name_ `std::string` `gtfb_simple_t::name_` [private]

Configured algorithm name, used to name the AC variables.

Additional Inherited Members

5.146.1 Detailed Description

MHA IO interface class for ALSA IO.

5.146.2 Constructor & Destructor Documentation

5.146.2.1 io_alsa_t() `io_alsa_t::io_alsa_t (`
 unsigned int *fragsize*,
 float *samplerate*,
 IOProcessEvent_t *proc_event*,
 void * *proc_handle*,
 IOStartedEvent_t *start_event*,
 void * *start_handle*,
 IOStoppedEvent_t *stop_event*,
 void * *stop_handle*)

Constructor, receives the callback handles to interact with the MHA framework.

5.146.3 Member Function Documentation

5.146.3.1 prepare() [1/2] `template<typename T >`
`void io_alsa_t::prepare (`
 int *nch_in*,
 int *nch_out*)

Called after the framework has prepared the processing plugins and the number of input and output channels are fixed.

open pcm streams

5.146.3.2 release() `void io_alsa_t::release ()`

MHA framework leaves prepared state.

5.146.3.3 start() `void io_alsa_t::start ()`

MHA framework calls this function when signal processing should start.

5.146.3.4 stop() `void io_alsa_t::stop ()`

MHA framework calls this function when signal processing should stop.

5.146.3.5 thread_start() `void * io_alsa_t::thread_start (`
`void * h) [static]`

MHAIOAlsa uses a separate thread that calls the alsa read and write functions to read and write audio samples, these functions are blocking until samples can be read or written.

This is the start function of that thread.

5.146.3.6 process() `void io_alsa_t::process () [private]`

5.146.3.7 prepare() [2/2] `template<>`
`void io_alsa_t::prepare (`
`int nch_in,`
`int nch_out)`

5.146.4 Member Data Documentation

5.146.4.1 b_process `bool io_alsa_t::b_process [private]`

5.147 `io_asterisk_fwcb_t` Class Reference

TCP sound-io library's interface to the framework callbacks.

Public Member Functions

- **io_asterisk_fwcb_t** (**IOProcessEvent_t** **proc_event**, void * **proc_handle**, **IOStartedEvent_t** **start_event**, void * **start_handle**, **IOStoppedEvent_t** **stop_event**, void * **stop_handle**)
Constructor stores framework handles and initializes error numbers to 0.
- virtual **~io_asterisk_fwcb_t** ()
Do-nothing destructor.
- virtual void **start** ()
Call the framework's start callback.
- virtual int **process** (**mha_wave_t** *sIn, **mha_wave_t** *&sOut)
Call the frameworks processing callback.
- virtual void **set_errnos** (int **proc_err**, int **io_err**)
Save error numbers to use during.
- virtual void **stop** ()
Call the frameworks stop callback.

Private Attributes

- **IOProcessEvent_t** **proc_event**
Pointer to signal processing callback function.
- **IOStartedEvent_t** **start_event**
Pointer to start notification callback function.
- **IOStoppedEvent_t** **stop_event**
Pointer to stop notification callback function.
- void * **proc_handle**
Handles belonging to framework.
- void * **start_handle**
- void * **stop_handle**
- int **proc_err**
Errors from the processing callback and from the TCP IO itself are stored here before closing Network handles.
- int **io_err**

5.147.1 Detailed Description

TCP sound-io library's interface to the framework callbacks.

5.147.2 Constructor & Destructor Documentation

```

5.147.2.1 io_asterisk_fwcb_t() io_asterisk_fwcb_t::io_asterisk_fwcb_t (
    IOProcessEvent_t proc_event,
    void * proc_handle,
    IOStartedEvent_t start_event,
    void * start_handle,
    IOStoppedEvent_t stop_event,
    void * stop_handle )

```

Constructor stores framework handles and initializes error numbers to 0.

```

5.147.2.2 ~io_asterisk_fwcb_t() virtual io_asterisk_fwcb_t::~~io_asterisk_fwcb_t (
) [inline], [virtual]

```

Do-nothing destructor.

5.147.3 Member Function Documentation

```

5.147.3.1 start() void io_asterisk_fwcb_t::start ( ) [virtual]

```

Call the framework's start callback.

```

5.147.3.2 process() int io_asterisk_fwcb_t::process (
    mha_wave_t * sIn,
    mha_wave_t *& sOut ) [virtual]

```

Call the frameworks processing callback.

Parameters

<i>sIn</i>	The input sound data just received from TCP.
<i>sOut</i>	A pointer to output sound data. Will point to the output sound data storage when the callback finishes.

Returns

Status, an error number from the signal processing callback. If this is != 0, then the connection should be closed.

```
5.147.3.3 set_errnos() void io_asterisk_fwcb_t::set_errnos (
    int proc_err,
    int io_err ) [virtual]
```

Save error numbers to use during.

See also

stop (p. [607](#))

Parameters

<i>proc_err</i>	The error number from the
-----------------	---------------------------

See also

process (p. [606](#)) callback.

Parameters

<i>io_err</i>	The error number from the io library itself.
---------------	--

```
5.147.3.4 stop() void io_asterisk_fwcb_t::stop ( ) [virtual]
```

Call the frameworks stop callback.

Uses the error numbers set previously with

See also

set_errnos (p. [607](#)).

5.147.4 Member Data Documentation

5.147.4.1 proc_event `IOProcessEvent_t io_asterisk_fwcb_t::proc_event [private]`

Pointer to signal processing callback function.

5.147.4.2 start_event `IOProcessEvent_t io_asterisk_fwcb_t::start_event [private]`

Pointer to start notification callback function.

Called when a new TCP connection is established or the user issues the start command while there is a connection.

5.147.4.3 stop_event `IOProcessEvent_t io_asterisk_fwcb_t::stop_event [private]`

Pointer to stop notification callback function.

Called when the connection is closed.

5.147.4.4 proc_handle `void* io_asterisk_fwcb_t::proc_handle [private]`

Handles belonging to framework.

5.147.4.5 start_handle `void * io_asterisk_fwcb_t::start_handle [private]`

5.147.4.6 stop_handle `void * io_asterisk_fwcb_t::stop_handle [private]`

5.147.4.7 proc_err `int io_asterisk_fwcb_t::proc_err [private]`

Errors from the processing callback and from the TCP IO itself are stored here before closing Network handles.

MHAIOTCP is notified by the server when the connection has been taken down, and calls

See also

stop (p. 607) from that callback. Within **stop** (p. 607), these error numbers are read again and transmitted to the framework.

5.147.4.8 io_err `int io_asterisk_fwcb_t::io_err [private]`

The documentation for this class was generated from the following file:

- **MHAIOAsterisk.cpp**

5.148 io_asterisk_parser_t Class Reference

The parser interface of the IOAsterisk library.

Inheritance diagram for io_asterisk_parser_t:

Public Member Functions

- virtual const std::string & **get_local_address** () const
Read parser variable local_address, this is the address of the network interface that should listen for incoming connections.
- virtual unsigned short **get_local_port** () const
Read parser variable local_port, this is the TCP port that should be used for incoming connections.
- virtual void **set_local_port** (unsigned short port)
Set parser variable local_port.
- virtual bool **get_server_port_open** () const
Return the status of the server port as it is known to the parser.
- virtual void **set_server_port_open** (bool open)
Inform the parser of the current status of the server socket.
- virtual bool **get_connected** () const
Return the parser's knowledge concerning whether there currently exists an established sound data TCP connection or not.
- virtual void **set_connected** (bool **connected**)
Inform the parser about the existence of a sound data connection.
- virtual void **set_new_peer** (unsigned short port, const std::string &host)
Set parser monitor variables peer_port and peer_address, and calls set_connected(true).
- **io_asterisk_parser_t** ()
Constructor initializes parser variables.
- virtual ~**io_asterisk_parser_t** ()
Do-nothing destructor.
- virtual void **debug** (const std::string &message)

Private Attributes

- **MHAParser::string_t local_address**
Lets the user set the local network interface to listen on.
- **MHAParser::int_t local_port**
Lets the user choose the local tcp port to listen on.
- **MHAParser::int_mon_t server_port_open**
Indicates whether the TCP server socket is currently open.
- **MHAParser::int_mon_t connected**
Indicator if there currently is a sound data connection over TCP.
- **MHAParser::string_mon_t peer_address**
Display the ip address of the currently connected sound data client.
- **MHAParser::int_mon_t peer_port**
Display the tcp port used by the current sound data client.
- **MHAParser::string_t debug_filename**
filename to write debugging info to (if non-empty)
- FILE * **debug_file**
file handle to write debugging info to

Additional Inherited Members

5.148.1 Detailed Description

The parser interface of the IOAsterisk library.

5.148.2 Constructor & Destructor Documentation

5.148.2.1 io_asterisk_parser_t() `io_asterisk_parser_t::io_asterisk_parser_t ()`

Constructor initializes parser variables.

5.148.2.2 `~io_asterisk_parser_t()` `virtual io_asterisk_parser_t::~~io_asterisk_parser_t () [inline], [virtual]`

Do-nothing destructor.

5.148.3 Member Function Documentation

5.148.3.1 `get_local_address()` `virtual const std::string& io_asterisk_parser_t::get_local_address () const [inline], [virtual]`

Read parser variable `local_address`, this is the address of the network interface that should listen for incoming connections.

Returns

A string containing the address of the local interface as it was set by the user.

5.148.3.2 get_local_port() `unsigned short io_asterisk_parser_t::get_local_port ()`
`const [virtual]`

Read parser variable `local_port`, this is the TCP port that should be used for incoming connections.

Returns

The local tcp port to listen on as it was chosen by the user. The port number is between `MIN_TCP_PORT` and `MAX_TCP_PORT`.

5.148.3.3 set_local_port() `void io_asterisk_parser_t::set_local_port (`
`unsigned short port) [virtual]`

Set parser variable `local_port`.

This is needed when it was set to 0 before: In this case, the OS chooses a free port for the TCP server socket, and the port that it chose has to be published to the user over the parser interface.

Parameters

<i>port</i>	The TCP port number that is currently used. In the range [<code>MIN_TCP_PORT</code> , <code>MAX_TCP_PORT</code>], excluding 0.
-------------	--

Precondition

`get_local_port()` (p. 611) currently returns 0.

5.148.3.4 get_server_port_open() `bool io_asterisk_parser_t::get_server_port_open (`
`) const [virtual]`

Return the status of the server port as it is known to the parser.

Returns

false after initialization, or the value most recently set via

See also

`set_server_port_open` (p. 612).

5.148.3.5 set_server_port_open() void io_asterisk_parser_t::set_server_port_open (bool open) [virtual]

Inform the parser of the current status of the server socket.

Parameters

<i>open</i>	Indicates whether the server socket has just been opened or closed.
-------------	---

Precondition

open may only have the value true if **get_server_port_open()** (p. 612) currently returns false.

Postcondition

See also

get_server_port_open (p. 612) returns the **value** (p. 49) of *open*.

5.148.3.6 get_connected() bool io_asterisk_parser_t::get_connected () const [virtual]

Return the parser's knowledge concerning whether there currently exists an established sound data TCP connection or not.

Returns

false after initialization, or the value most recently set via

See also

set_connected (p. 613).

5.148.3.7 set_connected() void io_asterisk_parser_t::set_connected (bool connected) [virtual]

Inform the parser about the existence of a sound data connection.

Parameters

<i>connected</i>	Indicates whether there currently is a connection or not.
------------------	---

Precondition

connected must not have the same value that is currently returned by

See also

get_connected (p. 613).

Postcondition**See also**

get_connected (p. 613) returns the **value** (p. 49) of `open`.

5.148.3.8 set_new_peer() `void io_asterisk_parser_t::set_new_peer (`
`unsigned short port,`
`const std::string & host) [virtual]`

Set parser monitor variables `peer_port` and `peer_address`, and calls `set_connected(true)`.

This method should be called when a new connection is established.

Parameters

<i>port</i>	The TCP port number used by the peer.
<i>host</i>	The Internet host where the peer is located.

Precondition

See also

get_connected (p. 613) currently returns false.

Postcondition

See also

get_connected (p. 613) returns true.

5.148.3.9 debug() `virtual void io_asterisk_parser_t::debug (const std::string & message) [inline], [virtual]`

5.148.4 Member Data Documentation

5.148.4.1 local_address `MHAParser::string_t io_asterisk_parser_t::local_address [private]`

Lets the user set the local network interface to listen on.

5.148.4.2 local_port `MHAParser::int_t io_asterisk_parser_t::local_port [private]`

Lets the user choose the local tcp port to listen on.

5.148.4.3 server_port_open `MHAParser::int_mon_t io_asterisk_parser_t::server_port_open [private]`

Indicates wether the TCP server socket is currently open.

5.148.4.4 connected `MHAParser::int_mon_t io_asterisk_parser_t::connected` [private]

Indicator if there currently is a sound data connection over TCP.

5.148.4.5 peer_address `MHAParser::string_mon_t io_asterisk_parser_t::peer_address` [private]

Display the ip address of the currently connected sound data client.

5.148.4.6 peer_port `MHAParser::int_mon_t io_asterisk_parser_t::peer_port` [private]

Display the tcp port used by the current sound data client.

5.148.4.7 debug_filename `MHAParser::string_t io_asterisk_parser_t::debug_filename` [private]

filename to write debugging info to (if non-empty)

5.148.4.8 debug_file `FILE* io_asterisk_parser_t::debug_file` [private]

file handle to write debugging info to

The documentation for this class was generated from the following file:

- **MHAIOAsterisk.cpp**

5.149 io_asterisk_sound_t Class Reference

Sound data handling of io tcp library.

Public Member Functions

- **io_asterisk_sound_t** (int **fragsize**, float **samplerate**)
Initialize sound data handling.
- virtual **~io_asterisk_sound_t** ()
Do-nothing destructor.
- virtual void **prepare** (int **num_inchannels**, int **num_outchannels**)
Called during prepare, sets number of audio channels and allocates sound data storage.
- virtual void **release** ()
Called during release.
- virtual int **chunkbytes_in** () const
Number of bytes that constitute one input sound chunk.
- virtual std::string **header** () const
Create the tcp sound header lines.
- std::string & **hton** (const **mha_wave_t** *s_out)
Serialize data for network transfer.
- **mha_wave_t** * **ntoh** (const std::string &data)
Deserialize data from network.

Private Attributes

- int **fragsize**
Number of sound samples in each channel expected and returned from processing callback.
- float **samplerate**
Sampling rate.
- int **num_inchannels**
Number of input channels.
- int **num_outchannels**
- **MHASignal::waveform_t** * **s_in**
Storage for input signal.
- std::string **output_data**
Serialized data for network transfer.

5.149.1 Detailed Description

Sound data handling of io tcp library.

5.149.2 Constructor & Destructor Documentation

5.149.2.1 io_asterisk_sound_t() `io_asterisk_sound_t::io_asterisk_sound_t (int fragsize, float samplerate)`

Initialize sound data handling.

Parameters

<i>fragsize</i>	Number of sound samples in each channel expected and returned from processing callback.
<i>samplerate</i>	Number of samples per second in each channel.

5.149.2.2 `~io_asterisk_sound_t()` `virtual io_asterisk_sound_t::~io_asterisk_sound_t () [inline], [virtual]`

Do-nothing destructor.

5.149.3 Member Function Documentation

5.149.3.1 `prepare()` `void io_asterisk_sound_t::prepare (int num_inchannels, int num_outchannels) [virtual]`

Called during prepare, sets number of audio channels and allocates sound data storage.

Parameters

<i>num_inchannels</i>	Number of input audio channels.
<i>num_outchannels</i>	Number of output audio channels.

5.149.3.2 `release()` `void io_asterisk_sound_t::release () [virtual]`

Called during release.

Deletes sound data storage.

5.149.3.3 chunkbytes_in() `int io_asterisk_sound_t::chunkbytes_in () const [virtual]`

Number of bytes that constitute one input sound chunk.

Returns

Number of bytes to read from TCP connection before invoking signal processing.

5.149.3.4 header() `std::string io_asterisk_sound_t::header () const [virtual]`

Create the tcp sound header lines.

5.149.3.5 hton() `std::string & io_asterisk_sound_t::hton (const mha_wave_t * s_out)`

Serialize data for network transfer.

5.149.3.6 ntoh() `mha_wave_t * io_asterisk_sound_t::ntoh (const std::string & data)`

Deserialize data from network.

5.149.4 Member Data Documentation

5.149.4.1 fragsize `int io_asterisk_sound_t::fragsize [private]`

Number of sound samples in each channel expected and returned from processing callback.

5.149.4.2 samplerate `float io_asterisk_sound_t::samplerate [private]`

Sampling rate.

Number of samples per second in each channel.

5.149.4.3 num_inchannels `int io_asterisk_sound_t::num_inchannels [private]`

Number of input channels.

Number of channels expected from and returned by signal processing callback.

5.149.4.4 num_outchannels `int io_asterisk_sound_t::num_outchannels [private]`

5.149.4.5 s_in `MHASignal::waveform_t* io_asterisk_sound_t::s_in [private]`

Storage for input signal.

5.149.4.6 output_data `std::string io_asterisk_sound_t::output_data [private]`

Serialized data for network transfer.

The documentation for this class was generated from the following file:

- **MHAIOAsterisk.cpp**

5.150 io_asterisk_t Class Reference

The tcp sound io library.

Public Member Functions

- **io_asterisk_t** (int fragsize, float samplerate, **IOProcessEvent_t** proc_event, void *proc_handle, **IOStartedEvent_t** start_event, void *start_handle, **IOStoppedEvent_t** stop_event, void *stop_handle)
- void **prepare** (int num_inchannels, int num_outchannels)
Allocate server socket and start thread waiting for sound data exchange.
- void **start** ()
Call frameworks start callback if there is a sound data connection at the moment.
- void **stop** ()
Close the current connection if there is one.
- void **release** ()
Close the current connection and close the server socket.
- virtual void **accept_loop** ()
IO thread executes this method.
- virtual void **connection_loop** (**MHA_TCP::Connection** *c)
IO thread executes this method for each connection.
- virtual void **parse** (const char *cmd, char *retval, unsigned int len)
Parser interface.
- virtual **~io_asterisk_t** ()

Private Attributes

- **io_asterisk_parser_t** parser
- **io_asterisk_sound_t** sound
- **io_asterisk_fwcb_t** fwcb
- **MHA_TCP::Server** * server
- **MHA_TCP::Thread** * thread
- **MHA_TCP::Async_Notify** notify_start
- **MHA_TCP::Async_Notify** notify_stop
- **MHA_TCP::Async_Notify** notify_release

5.150.1 Detailed Description

The tcp sound io library.

5.150.2 Constructor & Destructor Documentation

```
5.150.2.1 io_asterisk_t() io_asterisk_t::io_asterisk_t (
    int fragsize,
    float samplerate,
    IOProcessEvent_t proc_event,
    void * proc_handle,
    IOStartedEvent_t start_event,
    void * start_handle,
    IOStoppedEvent_t stop_event,
    void * stop_handle )
```

```
5.150.2.2 ~io_asterisk_t() virtual io_asterisk_t::~~io_asterisk_t ( ) [inline],
[virtual]
```

5.150.3 Member Function Documentation

```
5.150.3.1 prepare() void io_asterisk_t::prepare (
    int num_inchannels,
    int num_outchannels )
```

Allocate server socket and start thread waiting for sound data exchange.

prepare opens the tcp server socket and starts the io thread that listens for audio data on the tcp socket after doing some sanity checks

```
5.150.3.2 start() void io_asterisk_t::start ( )
```

Call frameworks start callback if there is a sound data connection at the moment.

```
5.150.3.3 stop() void io_asterisk_t::stop ( )
```

Close the current connection if there is one.

stop IO thread

5.150.3.4 release() `void io_asterisk_t::release ()`

Close the current connection and close the server socket.

Stop IO thread and close server socket.

5.150.3.5 accept_loop() `void io_asterisk_t::accept_loop () [virtual]`

IO thread executes this method.

5.150.3.6 connection_loop() `void io_asterisk_t::connection_loop (MHA_TCP::Connection * c) [virtual]`

IO thread executes this method for each connection.

Parameters

<code>c</code>	pointer to connection. <code>connection_loop</code> deletes connection before exiting.
----------------	--

5.150.3.7 parse() `virtual void io_asterisk_t::parse (const char * cmd, char * retval, unsigned int len) [inline], [virtual]`

Parser interface.

5.150.4 Member Data Documentation

5.150.4.1 parser `io_asterisk_parser_t io_asterisk_t::parser [private]`

5.150.4.2 sound `io_asterisk_sound_t io_asterisk_t::sound [private]`

5.150.4.3 fwcb `io_asterisk_fwcb_t io_asterisk_t::fwcb [private]`

5.150.4.4 server `MHA_TCP::Server* io_asterisk_t::server [private]`

5.150.4.5 thread `MHA_TCP::Thread* io_asterisk_t::thread [private]`

5.150.4.6 notify_start `MHA_TCP::Async_Notify io_asterisk_t::notify_start [private]`

5.150.4.7 notify_stop `MHA_TCP::Async_Notify io_asterisk_t::notify_stop [private]`

5.150.4.8 notify_release `MHA_TCP::Async_Notify io_asterisk_t::notify_release [private]`

The documentation for this class was generated from the following file:

5.151 io_dummy_t Class Reference

Dummy sound io library.

Inheritance diagram for io_dummy_t:

Public Member Functions

- **io_dummy_t** (unsigned int **fragsize**, float **samplerate**, **IOProcessEvent_t proc_event**, void * **proc_handle**, **IOStartedEvent_t start_event**, void * **start_handle**, **IOStoppedEvent_t stop_event**, void * **stop_handle**)
- void **prepare** (int nch_in)
Prepare.
- void **release** ()
Release.
- void **start** ()
Initialize main_loop and start the loop immediately, stop on error.
- void **stop** ()
Send stop request to main loop and join thread.

Private Attributes

- float **samplerate**
The framework's sampling rate.
- unsigned int **fragsize**
The framework's frag size.
- **IOProcessEvent_t proc_event**
Pointer to signal processing callback function.

- **IOStartedEvent_t start_event**
Pointer to start notification callback function.
- **IOStoppedEvent_t stop_event**
Pointer to stop notification callback function.
- void * **proc_handle**
Handles belonging to framework.
- void * **start_handle**
- void * **stop_handle**
- std::unique_ptr< **MHASignal::waveform_t** > **in**
Input sound for framework, always zero.
- **mha_wave_t** * **out**
Output from framework, always ignored.
- std::thread **main_loop**
Main event loop.
- std::atomic< bool > **stop_request**
Stop request flag for main_loop.

Additional Inherited Members

5.151.1 Detailed Description

Dummy sound io library.

Simulates real time sound. Input is always zero, output is always ignored.

5.151.2 Constructor & Destructor Documentation

5.151.2.1 io_dummy_t() `io_dummy_t::io_dummy_t (`
 unsigned int *fragsize,*
 float *samplerate,*
 IOProcessEvent_t *proc_event,*
 void * *proc_handle,*
 IOStartedEvent_t *start_event,*
 void * *start_handle,*
 IOStoppedEvent_t *stop_event,*
 void * *stop_handle*)

5.151.3 Member Function Documentation

5.151.3.1 prepare() `void io_dummy_t::prepare (int nch_in)`

Prepare.

Initialized the input buffer

5.151.3.2 release() `void io_dummy_t::release ()`

Release.

Frees the input buffer

5.151.3.3 start() `void io_dummy_t::start ()`

Initialize main_loop and start the loop immediately, stop on error.

5.151.3.4 stop() `void io_dummy_t::stop ()`

Send stop request to main loop and join thread.

5.151.4 Member Data Documentation

5.151.4.1 samplerate `float io_dummy_t::samplerate [private]`

The framework's sampling rate.

5.151.4.2 fragsize `unsigned int io_dummy_t::fragsize [private]`

The framework's frag size.

5.151.4.3 proc_event `IOProcessEvent_t io_dummy_t::proc_event [private]`

Pointer to signal processing callback function.

5.151.4.4 start_event `IOSTartedEvent_t io_dummy_t::start_event [private]`

Pointer to start notification callback function.

Called when the user issues the start command.

5.151.4.5 stop_event `IOPStoppedEvent_t io_dummy_t::stop_event [private]`

Pointer to stop notification callback function.

Called when the user issues a stop request

5.151.4.6 proc_handle `void* io_dummy_t::proc_handle [private]`

Handles belonging to framework.

5.151.4.7 start_handle `void * io_dummy_t::start_handle [private]`

5.151.4.8 stop_handle `void * io_dummy_t::stop_handle [private]`

5.151.4.9 in `std::unique_ptr< MHASignal::waveform_t> io_dummy_t::in [private]`

Input sound for framework, always zero.

5.151.4.10 out mha_wave_t* io_dummy_t::out [private]

Output from framework, always ignored.

5.151.4.11 main_loop std::thread io_dummy_t::main_loop [private]

Main event loop.

Calls the framework's process chain periodically according to sampling rate and fragsize

5.151.4.12 stop_request std::atomic<bool> io_dummy_t::stop_request [private]

Stop request flag for main_loop.

The documentation for this class was generated from the following file:

5.153.1 Detailed Description

Class for loading MHA sound IO module.

5.153.2 Constructor & Destructor Documentation

5.153.2.1 io_lib_t() `io_lib_t::io_lib_t (`
 `int fragsize,`
 `float samplerate,`
 `IOProcessEvent_t proc_event,`
 `void * proc_handle,`
 `IOStartedEvent_t start_event,`
 `void * start_handle,`
 `IOStoppedEvent_t stop_event,`
 `void * stop_handle,`
 `std::string libname)`

load and initialize MHA sound io module.

5.153.2.2 `~io_lib_t()` `io_lib_t::~~io_lib_t ()`

Deinitialize and unload this MHA sound io module.

5.153.3 Member Function Documentation**5.153.3.1** `prepare()` `void io_lib_t::prepare (`
`unsigned int inch,`
`unsigned int outch)`

Prepare the sound io module.

After preparation, the sound io module may start the sound processing at any time (external trigger). When the sound processing is started, the sound io module will call the `start_event` callback.

Parameters

<i>inch</i>	number of input channels
<i>outch</i>	number of output channels

5.153.3.2 `start()` `void io_lib_t::start ()`

Tell the sound io module to start sound processing.

Some io modules need this, for others that wait for external events this method might do nothing.

5.153.3.3 `stop()` `void io_lib_t::stop ()`**5.153.3.4** `release()` `void io_lib_t::release ()`

5.153.3.5 lib_str_error() `std::string io_lib_t::lib_str_error (int err)`

5.153.3.6 get_documentation() `std::string io_lib_t::get_documentation () const`
[inline]

5.153.3.7 get_categories() `std::vector<std::string> io_lib_t::get_categories () const`

TCP sound-io library's interface to the framework callbacks.

Public Member Functions

- **io_tcp_fwcb_t** (`IOProcessEvent_t proc_event`, `void * proc_handle`, `IOStartedEvent_t start_event`, `void * start_handle`, `IOStoppedEvent_t stop_event`, `void * stop_handle`)
Constructor stores framework handles and initializes error numbers to 0.
- virtual `~io_tcp_fwcb_t` ()
Do-nothing destructor.
- virtual void **start** ()
Call the framework's start callback.
- virtual int **process** (`mha_wave_t *sIn`, `mha_wave_t *&sOut`)
Call the frameworks processing callback.
- virtual void **set_errnos** (int `proc_err`, int `io_err`)
Save error numbers to use during.
- virtual void **stop** ()
Call the frameworks stop callback.

Private Attributes

- **IOProcessEvent_t proc_event**
Pointer to signal processing callback function.
- **IOStartedEvent_t start_event**
Pointer to start notification callback function.
- **IOStoppedEvent_t stop_event**
Pointer to stop notification callback function.
- void * **proc_handle**
Handles belonging to framework.
- void * **start_handle**
- void * **stop_handle**
- int **proc_err**
Errors from the processing callback and from the TCP IO itself are stored here before closing Network handles.
- int **io_err**

5.155.1 Detailed Description

TCP sound-io library's interface to the framework callbacks.

5.155.2 Constructor & Destructor Documentation

5.155.2.1 io_tcp_fwcb_t() io_tcp_fwcb_t::io_tcp_fwcb_t (
 IOProcessEvent_t proc_event,
 void * proc_handle,
 IOStartedEvent_t start_event,
 void * start_handle,
 IOStoppedEvent_t stop_event,
 void * stop_handle)

Constructor stores framework handles and initializes error numbers to 0.

5.155.2.2 ~io_tcp_fwcb_t() virtual io_tcp_fwcb_t::~io_tcp_fwcb_t () [inline],
[virtual]

Do-nothing destructor.

5.155.3 Member Function Documentation

5.155.3.1 start() void io_tcp_fwcb_t::start () [virtual]

Call the framework's start callback.

5.155.3.2 process() int io_tcp_fwcb_t::process (
 mha_wave_t * sIn,
 mha_wave_t *& sOut) [virtual]

Call the frameworks processing callback.

Parameters

<i>sIn</i>	The input sound data just received from TCP.
<i>sOut</i>	A pointer to output sound data. Will point to the output sound data storage when the callback finishes.

Returns

Status, an error number from the signal processing callback. If this is != 0, then the connection should be closed.

5.155.3.3 set_errnos() `void io_tcp_fwcb_t::set_errnos (`
`int proc_err,`
`int io_err) [virtual]`

Save error numbers to use during.

See also

stop (p. 648)

Parameters

<i>proc_err</i>	The error number from the
-----------------	---------------------------

See also

process (p. 647) callback.

Parameters

<i>io_err</i>	The error number from the io library itself.
---------------	--

5.155.3.4 stop() `void io_tcp_fwcb_t::stop () [virtual]`

Call the frameworks stop callback.

Uses the error numbers set previously with

See also

`set_errnos` (p. 648).

5.155.4 Member Data Documentation

5.155.4.1 proc_event `IOProcessEvent_t io_tcp_fwcb_t::proc_event [private]`

Pointer to signal processing callback function.

5.155.4.2 start_event `IOStartedEvent_t io_tcp_fwcb_t::start_event [private]`

Pointer to start notification callback function.

Called when a new TCP connection is established or the user issues the start command while there is a connection.

5.155.4.3 stop_event `IOStoppedEvent_t io_tcp_fwcb_t::stop_event [private]`

Pointer to stop notification callback function.

Called when the connection is closed.

5.155.4.4 proc_handle `void* io_tcp_fwcb_t::proc_handle [private]`

Handles belonging to framework.

5.155.4.5 start_handle `void * io_tcp_fwcb_t::start_handle [private]`

5.155.4.6 stop_handle `void * io_tcp_fwcb_t::stop_handle [private]`

5.155.4.7 `proc_err` `int io_tcp_fwcb_t::proc_err [private]`

Errors from the processing callback and from the TCP IO itself are stored here before closing Network handles.

MHAIOTCP is notified by the server when the connection has been taken down, and calls

See also

stop (p. 648) from that callback. Within **stop** (p. 648), these error numbers are read again and transmitted to the framework.

5.155.4.8 `io_err` `int io_tcp_fwcb_t::io_err [private]`

The documentation for this class was generated from the following file:

- **MHAIOTCP.cpp**

5.156 `io_tcp_parser_t` Class Reference

The parser interface of the IOTCP library.

Inheritance diagram for `io_tcp_parser_t`:

Public Member Functions

- virtual const std::string & **get_local_address** () const
Read parser variable local_address, this is the address of the network interface that should listen for incoming connections.
- virtual unsigned short **get_local_port** () const
Read parser variable local_port, this is the TCP port that should be used for incoming connections.
- virtual void **set_local_port** (unsigned short port)
Set parser variable local_port.
- virtual bool **get_server_port_open** () const
Return the status of the server port as it is known to the parser.
- virtual void **set_server_port_open** (bool open)
Inform the parser of the current status of the server socket.
- virtual bool **get_connected** () const
Return the parser's knowledge concerning whether there currently exists an established sound data TCP connection or not.
- virtual void **set_connected** (bool **connected**)
Inform the parser about the existence of a sound data connection.
- virtual void **set_new_peer** (unsigned short port, const std::string &host)
Set parser monitor variables peer_port and peer_address, and calls set_connected(true).
- **io_tcp_parser_t** ()
Constructor initializes parser variables.
- virtual ~**io_tcp_parser_t** ()
Do-nothing destructor.
- virtual void **debug** (const std::string &message)

Private Attributes

- **MHAParser::string_t local_address**
Lets the user set the local network interface to listen on.
- **MHAParser::int_t local_port**
Lets the user choose the local tcp port to listen on.
- **MHAParser::int_mon_t server_port_open**
Indicates whether the TCP server socket is currently open.
- **MHAParser::int_mon_t connected**
Indicator if there currently is a sound data connection over TCP.
- **MHAParser::string_mon_t peer_address**
Display the ip address of the currently connected sound data client.
- **MHAParser::int_mon_t peer_port**
Display the tcp port used by the current sound data client.
- **MHAParser::string_t debug_filename**
filename to write debugging info to (if non-empty)
- FILE * **debug_file**
file handle to write debugging info to

Additional Inherited Members

5.156.1 Detailed Description

The parser interface of the IOTCP library.

5.156.2 Constructor & Destructor Documentation

5.156.2.1 `io_tcp_parser_t()` `io_tcp_parser_t::io_tcp_parser_t ()`

Constructor initializes parser variables.

5.156.2.2 `~io_tcp_parser_t()` `virtual io_tcp_parser_t::~~io_tcp_parser_t () [inline], [virtual]`

Do-nothing destructor.

5.156.3 Member Function Documentation

5.156.3.1 `get_local_address()` `virtual const std::string& io_tcp_parser_t::get_↔ local_address () const [inline], [virtual]`

Read parser variable `local_address`, this is the address of the network interface that should listen for incoming connections.

Returns

A string containing the address of the local interface as it was set by the user.

5.156.3.2 get_local_port() unsigned short io_tcp_parser_t::get_local_port () const
[virtual]

Read parser variable local_port, this is the TCP port that should be used for incoming connections.

Returns

The local tcp port to listen on as it was chosen by the user. The port number is between MIN_TCP_PORT and MAX_TCP_PORT.

5.156.3.3 set_local_port() void io_tcp_parser_t::set_local_port (unsigned short port) [virtual]

Set parser variable local_port.

This is needed when it was set to 0 before: In this case, the OS chooses a free port for the TCP server socket, and the port that it chose has to be published to the user via the parser interface.

Parameters

<i>port</i>	The TCP port number that is currently used. In the range [MIN_TCP_PORT, MAX_TCP_PORT], excluding 0.
-------------	---

Precondition

get_local_port() (p. 652) currently returns 0.

5.156.3.4 get_server_port_open() bool io_tcp_parser_t::get_server_port_open () const [virtual]

Return the status of the server port as it is known to the parser.

Returns

false after initialization, or the value most recently set via

See also

set_server_port_open (p. 653).

5.156.3.5 set_server_port_open() `void io_tcp_parser_t::set_server_port_open (bool open) [virtual]`

Inform the parser of the current status of the server socket.

Parameters

<i>open</i>	Indicates whether the server socket has just been opened or closed.
-------------	---

Precondition

open may only have the value true if **get_server_port_open()** (p. 653) currently returns false.

Postcondition

See also

get_server_port_open (p. 653) returns the **value** (p. 49) of *open*.

5.156.3.6 get_connected() `bool io_tcp_parser_t::get_connected () const [virtual]`

Return the parser's knowledge concerning whether there currently exists an established sound data TCP connection or not.

Returns

false after initialization, or the value most recently set via

See also

set_connected (p. 654).

5.156.3.7 set_connected() `void io_tcp_parser_t::set_connected (bool connected) [virtual]`

Inform the parser about the existence of a sound data connection.

Parameters

<i>connected</i>	Indicates whether there currently is a connection or not.
------------------	---

Precondition

connected must not have the same value that is currently returned by

See also

get_connected (p. 654).

Postcondition

See also

get_connected (p. 654) returns the **value** (p. 49) of `open`.

5.156.3.8 set_new_peer() `void io_tcp_parser_t::set_new_peer (unsigned short port, const std::string & host) [virtual]`

Set parser monitor variables `peer_port` and `peer_address`, and calls `set_connected(true)`.

This method should be called when a new connection is established.

Parameters

<i>port</i>	The TCP port number used by the peer.
<i>host</i>	The Internet host where the peer is located.

Precondition

See also

get_connected (p. 654) currently returns false.

Postcondition

See also

get_connected (p. 654) returns true.

5.156.3.9 debug() `virtual void io_tcp_parser_t::debug (`
`const std::string & message) [inline], [virtual]`

5.156.4 Member Data Documentation

5.156.4.1 local_address `MHAParser::string_t io_tcp_parser_t::local_address [private]`

Lets the user set the local network interface to listen on.

5.156.4.2 local_port `MHAParser::int_t io_tcp_parser_t::local_port [private]`

Lets the user choose the local tcp port to listen on.

5.156.4.3 server_port_open `MHAParser::int_mon_t io_tcp_parser_t::server_port_↔`
`open [private]`

Indicates wether the TCP server socket is currently open.

5.156.4.4 connected `MHAParser::int_mon_t io_tcp_parser_t::connected [private]`

Indicator if there currently is a sound data connection over TCP.

5.156.4.5 peer_address `MHAParser::string_mon_t io_tcp_parser_t::peer_address [private]`

Display the ip address of the currently connected sound data client.

5.156.4.6 peer_port `MHAParser::int_mon_t io_tcp_parser_t::peer_port [private]`

Display the tcp port used by the current sound data client.

5.156.4.7 debug_filename `MHAParser::string_t io_tcp_parser_t::debug_filename [private]`

filename to write debugging info to (if non-empty)

5.156.4.8 debug_file `FILE* io_tcp_parser_t::debug_file [private]`

file handle to write debugging info to

The documentation for this class was generated from the following file:

- **MHAIOTCP.cpp**

5.157 io_tcp_sound_t Class Reference

Sound data handling of io tcp library.

Classes

- union **float_union**

This union helps in conversion of floats from host byte order to network byte order and back again.

Public Member Functions

- **io_tcp_sound_t** (int **fragsize**, float **samplerate**)
Initialize sound data handling.
- virtual **~io_tcp_sound_t** ()
Do-nothing destructor.
- virtual void **prepare** (int **num_inchannels**, int **num_outchannels**)
Called during prepare, sets number of audio channels and allocates sound data storage.
- virtual void **release** ()
Called during release.
- virtual int **chunkbytes_in** () const
Number of bytes that constitute one input sound chunk.
- virtual std::string **header** () const
Create the tcp sound header lines.
- virtual **mha_wave_t * ntoh** (const std::string &data)
*Copy data received from tcp into **mha_wave_t** (p. 894) structure.*
- virtual std::string **hton** (const **mha_wave_t *s_out**)
Copy sound data from the output sound structure to a string.

Static Private Member Functions

- static void **check_sound_data_type** ()
*Check if **mha_real_t** is a usable 32-bit floating point type.*

Private Attributes

- int **fragsize**
Number of sound samples in each channel expected and returned from processing callback.
- float **samplerate**
Sampling rate.
- int **num_inchannels**
Number of input channels.
- int **num_outchannels**
- **MHASignal::waveform_t * s_in**
Storage for input signal.

5.157.1 Detailed Description

Sound data handling of io tcp library.

5.157.2 Constructor & Destructor Documentation

5.157.2.1 io_tcp_sound_t() `io_tcp_sound_t::io_tcp_sound_t (int fragsize, float samplerate)`

Initialize sound data handling.

Checks sound data type by calling

See also

check_sound_data_type (p. [659](#)).

Parameters

<i>fragsize</i>	Number of sound samples in each channel expected and returned from processing callback.
<i>samplerate</i>	Number of samples per second in each channel.

5.157.2.2 ~io_tcp_sound_t() `virtual io_tcp_sound_t::~io_tcp_sound_t () [inline], [virtual]`

Do-nothing destructor.

5.157.3 Member Function Documentation

5.157.3.1 check_sound_data_type() `void io_tcp_sound_t::check_sound_data_type () [static], [private]`

Check if mha_real_t is a usable 32-bit floating point type.

Exceptions

<i>MHA_Error</i> (p. 818)	if <code>mha_real_t</code> is not compatible to 32-bit float.
----------------------------------	---

5.157.3.2 prepare() `void io_tcp_sound_t::prepare (`
`int num_inchannels,`
`int num_outchannels) [virtual]`

Called during prepare, sets number of audio channels and allocates sound data storage.

Parameters

<code>num_inchannels</code>	Number of input audio channels.
<code>num_outchannels</code>	Number of output audio channels.

5.157.3.3 release() `void io_tcp_sound_t::release () [virtual]`

Called during release.

Deletes sound data storage.

5.157.3.4 chunkbytes_in() `int io_tcp_sound_t::chunkbytes_in () const [virtual]`

Number of bytes that constitute one input sound chunk.

Returns

Number of bytes to read from TCP connection before invoking signal processing.

5.157.3.5 header() `std::string io_tcp_sound_t::header () const [virtual]`

Create the tcp sound header lines.

5.157.3.6 ntohs() `mha_wave_t * io_tcp_sound_t::ntoh (`
`const std::string & data) [virtual]`

Copy data received from tcp into **`mha_wave_t`** (p. 894) structure.

Doing network-to-host byte order swapping in the process.

Parameters

<i>data</i>	One chunk (
-------------	-------------

See also

chunkbytes_in (p. 660) of sound data to process.

Returns

Pointer to the sound data storage.

5.157.3.7 hton() `std::string io_tcp_sound_t::hton (const mha_wave_t * s_out) [virtual]`

Copy sound data from the output sound structure to a string.

Doing host-to-network byte order swapping while at it.

Parameters

<i>s_out</i>	Pointer to the storage of the sound to put out.
--------------	---

Returns

The sound data in network byte order.

5.157.4 Member Data Documentation

5.157.4.1 fragsize `int io_tcp_sound_t::fragsize [private]`

Number of sound samples in each channel expected and returned from processing callback.

5.157.4.2 samplerate `float io_tcp_sound_t::samplerate [private]`

Sampling rate.

Number of samples per second in each channel.

5.157.4.3 num_inchannels `int io_tcp_sound_t::num_inchannels [private]`

Number of input channels.

Number of channels expected from and returned by signal processing callback.

5.157.4.4 num_outchannels `int io_tcp_sound_t::num_outchannels [private]`

5.157.4.5 s_in `MHASignal::waveform_t* io_tcp_sound_t::s_in [private]`

Storage for input signal.

The documentation for this class was generated from the following file:

- **MHAIOTCP.cpp**

5.158 io_tcp_sound_t::float_union Union Reference

This union helps in conversion of floats from host byte order to network byte order and back again.

Public Attributes

- float **f**
- unsigned int **i**
- char **c** [4]

5.158.1 Detailed Description

This union helps in conversion of floats from host byte order to network byte order and back again.

5.158.2 Member Data Documentation

5.158.2.1 f float io_tcp_sound_t::float_union::f

5.158.2.2 i unsigned int io_tcp_sound_t::float_union::i

5.158.2.3 c char io_tcp_sound_t::float_union::c[4]

The documentation for this union was generated from the following file:

- **MHAIOTCP.cpp**

5.159 io_tcp_t Class Reference

The tcp sound io library.

Public Member Functions

- **io_tcp_t** (int fragsize, float samplerate, **IOProcessEvent_t** proc_event, void *proc_↔ handle, **IOStartedEvent_t** start_event, void *start_handle, **IOStoppedEvent_t** stop_↔ event, void *stop_handle)
- void **prepare** (int num_inchannels, int num_outchannels)
Allocate server socket and start thread waiting for sound data exchange.
- void **start** ()
Call frameworks start callback if there is a sound data connection at the moment.
- void **stop** ()
Close the current connection if there is one.
- void **release** ()
Close the current connection and close the server socket.
- virtual void **accept_loop** ()
IO thread executes this method.
- virtual void **connection_loop** (**MHA_TCP::Connection** *c)
IO thread executes this method for each connection.
- virtual void **parse** (const char *cmd, char *retval, unsigned int len)
Parser interface.
- virtual **~io_tcp_t** ()

Private Attributes

- `io_tcp_parser_t` `parser`
- `io_tcp_sound_t` `sound`
- `io_tcp_fwcb_t` `fwcb`

- `MHA_TCP::Async_Notify` `notify_stop`
- `MHA_TCP::Async_Notify` `notify_release`

5.159.1 Detailed Description

The tcp sound io library.

5.159.2 Constructor & Destructor Documentation

5.159.2.1 `io_tcp_t()` `io_tcp_t::io_tcp_t (`
`int fragsize,`
`float samplerate,`
`IOProcessEvent_t proc_event,`
`void * proc_handle,`
`IOStartedEvent_t start_event,`
`void * start_handle,`
`IOStoppedEvent_t stop_event,`
`void * stop_handle)`

5.159.2.2 `~io_tcp_t()` `virtual io_tcp_t::~~io_tcp_t () [inline], [virtual]`

5.159.3 Member Function Documentation

5.159.3.1 prepare() `void io_tcp_t::prepare (`
 `int num_inchannels,`
 `int num_outchannels)`

Allocate server socket and start thread waiting for sound data exchange.

prepare opens the tcp server socket and starts the io thread that listens for audio data on the tcp socket after doing some sanity checks

5.159.3.2 start() `void io_tcp_t::start ()`

Call frameworks start callback if there is a sound data connection at the moment.

5.159.3.3 stop() `void io_tcp_t::stop ()`

Close the current connection if there is one.

stop IO thread

5.159.3.4 release() `void io_tcp_t::release ()`

Close the current connection and close the server socket.

Stop IO thread and close server socket.

5.159.3.5 accept_loop() `void io_tcp_t::accept_loop () [virtual]`

IO thread executes this method.

5.159.3.6 connection_loop() `void io_tcp_t::connection_loop (`
 `MHA_TCP::Connection * c) [virtual]`

IO thread executes this method for each connection.

Parameters

<i>c</i>	pointer to connection. <code>connection_loop</code> deletes connection before exiting.
----------	--

5.159.3.7 parse() `virtual void io_tcp_t::parse (`
`const char * cmd,`
`char * retval,`
`unsigned int len) [inline], [virtual]`

Parser interface.

5.159.4 Member Data Documentation

5.159.4.1 parser `io_tcp_parser_t io_tcp_t::parser [private]`

5.159.4.2 sound `io_tcp_sound_t io_tcp_t::sound [private]`

5.161.1 Detailed Description

Class to access the information stored in the plugin source code's MHAPLUGIN_DOCUMENTATION macro.

5.161.2 Constructor & Destructor Documentation

5.161.2.1 latex_doc_t() `latex_doc_t::latex_doc_t (`
`const std::string & plugname,`
`const std::string & plugin_macro)`

Constructor loads the plugin into this process.

Parameters

<i>plugname</i>	Name of the MHA plugin to process
<i>plugin_macro</i>	name of the LaTeX section macro that documents a single plugin (e.g. "section", "subsection", "subsubsection", ...)

5.161.3 Member Function Documentation

5.161.3.1 get_latex_doc() `std::string latex_doc_t::get_latex_doc ()`

This method accesses the compiled-in contents of the `MHAPLUGIN_DOCUMENTATION` macro and the exported interface functions of the loaded plugin to produce latex documentation for the plugin.

It tentatively prepares the plugin for processing and checks the AC variables registered by the plugin.

Returns

the complete latex documentation for this plugin

5.161.3.2 get_main_category() `std::string latex_doc_t::get_main_category () const`

Returns

the first word of the categories string in the `MHAPLUGIN_DOCUMENTATION` macro

5.161.3.3 get_categories() `std::vector< std::string > latex_doc_t::get_categories () const`

Returns

a vector of all words in the categories string in the `MHAPLUGIN_DOCUMENTATION` macro

5.161.3.4 strdom() `std::string latex_doc_t::strdom (mha_domain_t d) const [private]`

5.161.3.5 get_ac() `std::string latex_doc_t::get_ac (`
 `MHA_AC::algo_comm_t & ac,`
 `std::string txt) const [private]`

5.161.3.6 parsername() `std::string latex_doc_t::parsername (`
 `std::string s) const [private]`

5.161.3.7 get_parser_var() `std::string latex_doc_t::get_parser_var (`
 `MHAParser::base_t * p,`
 `std::string name) const [private]`

5.161.3.8 get_parser_tab() `std::string latex_doc_t::get_parser_tab (`
 `MHAParser::base_t * p,`
 `const std::string & prefix,`
 `const std::string & latex_macro) const [private]`

5.161.4 Member Data Documentation

5.161.4.1 plugname `const std::string latex_doc_t::plugname [private]`

5.161.4.2 latex_plugname `const std::string latex_doc_t::latex_plugname [private]`

5.161.4.3 ac `MHA_AC::algo_comm_class_t latex_doc_t::ac [private]`

5.161.4.4 loader `std::unique_ptr< plug_wrapperI> latex_doc_t::loader [private]`

5.161.4.5 plugin_macro `const std::string latex_doc_t::plugin_macro [private]`

5.162 level_matching::channel_pair Class Reference

Public Member Functions

- **channel_pair** (const std::pair< int, int > &idx_, **mha_real_t** filter_rate_, **mha_real_t** mismatch_time_constant_)
Channel pair ctor.
- **channel_pair** (int idx1_, int idx2_, **mha_real_t** filter_rate_, **mha_real_t** mismatch_time_constant_)
Channel pair ctor.
- **mha_real_t update_mismatch** (const **mha_wave_t** &signal_)
Calculates the filtered rms level mismatch.
- **mha_real_t update_mismatch** (const **mha_spec_t** &signal_, unsigned fftlen_)
Calculates the filtered rms level mismatch.
- **mha_real_t get_mismatch** () const
Get last filter result.
- const std::pair< int, int > & **get_idx** () const

Private Attributes

- std::pair< int, int > **idx**
Indices of channels.
- **MHAFilter::o1flt_lowpass_t mismatch**
Low-pass filtered level mismatch.

5.162.1 Constructor & Destructor Documentation

5.162.1.1 channel_pair() [1/2] `level_matching::channel_pair::channel_pair (const std::pair< int, int > & idx_, mha_real_t filter_rate_, mha_real_t mismatch_time_constant_)`

Channel pair ctor.

Parameters

<i>idx_</i>	Pair of channel indices
<i>filter_rate_</i>	Filter rate of low pass filter
<i>mismatch_time_↔ constant_</i>	Time constant of low pass filter

5.162.1.2 channel_pair() [2/2] `level_matching::channel_pair::channel_pair (`
`int idx1_,`
`int idx2_,`
`mha_real_t filter_rate_,`
`mha_real_t mismatch_time_constant_)`

Channel pair ctor.

Parameters

<i>idx1</i>	First channel index. Used as reference
<i>idx2</i>	Second channel index
<i>filter_rate_</i>	Filter rate of low pass filter
<i>mismatch_time_↔ constant_</i>	Time constant of low pass filter

5.162.2 Member Function Documentation

5.162.2.1 update_mismatch() [1/2] `mha_real_t level_matching::channel_pair::update↔
_mismatch (`
`const mha_wave_t & signal_)`

Calculates the filtered rms level mismatch.

Parameters

<i>signal</i>	Input signal
---------------	--------------

Returns

Low-pass filtered mismatch ratio

5.162.2.2 update_mismatch() [2/2] `mha_real_t level_matching::channel_pair::update_mismatch (`
`const mha_spec_t & signal_,`
`unsigned fftlen_)`

Calculates the filtered rms level mismatch.

Parameters

<i>signal</i>	Input signal
---------------	--------------

Returns

Low-pass filtered mismatch ratio

5.162.2.3 get_mismatch() `mha_real_t level_matching::channel_pair::get_mismatch (`
`) const`

Get last filter result.

Returns

Last filter result

5.162.2.4 get_idx() `const std::pair<int,int>& level_matching::channel_pair::get_idx`
`() const [inline]`

5.162.3 Member Data Documentation

5.162.3.1 idx `std::pair<int,int> level_matching::channel_pair::idx` [private]

Indices of channels.

5.162.3.2 mismatch `MHAFilter::o1flt_lowpass_t level_matching::channel_pair<←
::mismatch` [private]

Low-pass filtered level mismatch.

The documentation for this class was generated from the following files:

- `level_matching.hh`
- `level_matching.cpp`

5.163 level_matching::level_matching_config_t Class Reference

Public Member Functions

- `level_matching_config_t` (const `mhaconfig_t` &cfg_, const `std::vector< std::vector< int >>` &pairs_, `mha_real_t` signal_lp_fpass_, `mha_real_t` signal_fstop_, unsigned signal_lp_order_, `mha_real_t` level_tau_, `mha_real_t` range_)
RT-config c'tor.
- `~level_matching_config_t` ()=default
- `mha_wave_t * process (mha_wave_t *)`
- `mha_spec_t * process (mha_spec_t *)`

Private Attributes

- `MHASignal::waveform_t tmp`
Temporary storage for input signal to use waveform_t helper functions.
- `std::vector< channel_pair > pairings`
Channel pairings.
- `MHAFilter::iir_filter_state_t lp`
Nth-order low pass filter used to exclude high frequencies from level matching.
- `mha_real_t range`
Maximum matching range. Maximum adjustment done.
- unsigned `ftlen`
ftlen in spectral domain

5.163.1 Constructor & Destructor Documentation

5.163.1.1 level_matching_config_t() level_matching::level_matching_config_t::level_matching_config_t (

```

    const mhaconfig_t & cfg_,
    const std::vector< std::vector< int >> & pairs_,
    mha_real_t signal_lp_fpass_,
    mha_real_t signal_lp_fstop_,
    unsigned signal_lp_order_,
    mha_real_t level_tau_,
    mha_real_t range_ )

```

RT-config c'tor.

Parameters

<i>cfg_</i>	Structure containing a description of the form of the signal (domain, number of channels, frames per block, sampling rate).
-------------	---

Precondition

Size of param pairs must be two

Parameters

<i>pairs_</i>	Matrix containing the channel indices of the microphone pairs. Two entries per row.
<i>signal_tau</i>	Time constant of the signal low pass filter in seconds.
<i>level_tau</i>	Time constant of the level mismatch averaging filter in seconds.

5.163.1.2 ~level_matching_config_t() level_matching::level_matching_config_t::~~level_matching_config_t () [default]

5.163.2 Member Function Documentation

5.163.2.1 process() [1/2] `mha_wave_t * level_matching::level_matching_config_t↔`
`::process (`
`mha_wave_t * s)`

`::process (`
`mha_spec_t * s)`

5.163.3 Member Data Documentation

5.163.3.1 tmp `MHASignal::waveform_t level_matching::level_matching_config_t::tmp`
`[private]`

Temporary storage for input signal to use `waveform_t` helper functions.

5.163.3.2 pairings `std::vector< channel_pair> level_matching::level_matching_↔`
`config_t::pairings [private]`

Channel pairings.

5.163.3.3 lp `MHAFilter::iir_filter_state_t level_matching::level_matching_config_↔`
`_t::lp [private]`

Nth-order low pass filter used to exclude high frequencies from level matching.

5.163.3.4 range `mha_real_t level_matching::level_matching_config_t::range [private]`

Maximum matching range. Maximum adjustment done.

5.163.3.5 fftlen unsigned level_matching::level_matching_config_t::fftlen [private]

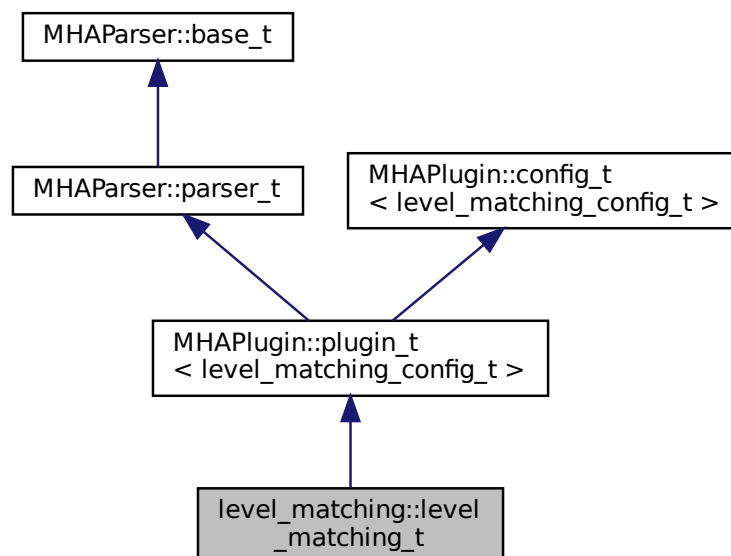

fftlen in spectral domain

5.169.1.2 `~lpc_burglattice()` `lpc_burglattice::~~lpc_burglattice ()`

5.169.2 Member Function Documentation

5.169.2.1 `process()` `mha_wave_t * lpc_burglattice::process (mha_wave_t * signal)`

Checks for the most recent configuration and defers processing to it.

5.169.2.2 `prepare()` `void lpc_burglattice::prepare (mhaconfig_t & signal_info) [virtual]`

Plugin preparation.

An opportunity to validate configuration parameters before instantiating a configuration.

Parameters

<i>signal_info</i>	Structure containing a description of the form of the signal (domain, number of channels, frames per block, sampling rate).
--------------------	---

Implements `MHAPlugin::plugin_t< lpc_burglattice_config >` (p. [1201](#)).

5.169.2.3 `release()` `void lpc_burglattice::release (void) [inline], [virtual]`

Reimplemented from `MHAPlugin::plugin_t< lpc_burglattice_config >` (p. [1202](#)).

5.169.2.4 `update_cfg()` `void lpc_burglattice::update_cfg () [private]`

5.169.3 Member Data Documentation

5.169.3.1 lpc_order `MHAParser::int_t lpc_burglattice::lpc_order`

5.169.3.2 name_kappa `MHAParser::string_t lpc_burglattice::name_kappa`

5.169.3.3 name_f `MHAParser::string_t lpc_burglattice::name_f`

5.169.3.4 name_b `MHAParser::string_t lpc_burglattice::name_b`

5.169.3.5 lambda `MHAParser::float_t lpc_burglattice::lambda`

5.169.3.6 patchbay `MHAEvents::patchbay_t< lpc_burglattice> lpc_burglattice↔
::patchbay [private]`

5.172 `Isl2ac::cfg_t` Class Reference

Runtime configuration class of the **Isl2ac** (p. 98) plugin.

Public Member Functions

- `cfg_t (MHA_AC::algo_comm_t &ac_, overrun_behavior overrun_, int bufsize_↔, int chunksize_, const std::vector< std::string > &streamnames_, int nchannels_, int nsamples_)`
*C'tor of **Isl2ac** (p. 98) run time configuration.*
- `void process ()`

Private Attributes

- `std::map< std::string, std::unique_ptr< save_var_base_t > > varlist`
Maps variable name to unique ptr's of `Isl` to `ac` bridges.

5.172.1 Detailed Description

Runtime configuration class of the **Isl2ac** (p. 98) plugin.

5.172.2 Constructor & Destructor Documentation

5.172.2.1 **cfg_t()** `cfg_t::cfg_t (`
 MHA_AC::algo_comm_t & *ac_*,
 overrun_behavior *overrun_*,
 int *bufsize_*,
 int *chunksize_*,
 const std::vector< std::string > & *streamnames_*,
 int *nchannels_*,
 int *nsamples_*)

C'tor of **Isl2ac** (p. 98) run time configuration.

Parameters

<i>ac_</i>	AC space, data from LSL will be inserted as AC variables
<i>overrun_</i>	Overrun behavior
<i>bufsize_</i>	Buffer size of the LSL stream inlet
<i>chunksize_</i>	Chunk size of the LSL stream
<i>streamnames_</i>	Names of LSL streams to be subscribed to
<i>nchannels_</i>	Number of channels to expect in the the LSL streams. Zero means accept any.
<i>nsamples_</i>	Number of samples per channel in the AC variable. Zero means resize as needed.

5.172.3 Member Function Documentation

5.172.3.1 **process()** `void cfg_t::process ()`

5.172.4 Member Data Documentation

5.172.4.1 varlist `std::map<std::string, std::unique_ptr< save_var_base_t > > lsl2ac↔
::cfg_t::varlist [private]`

Maps variable name to unique ptr's of lsl to ac bridges.

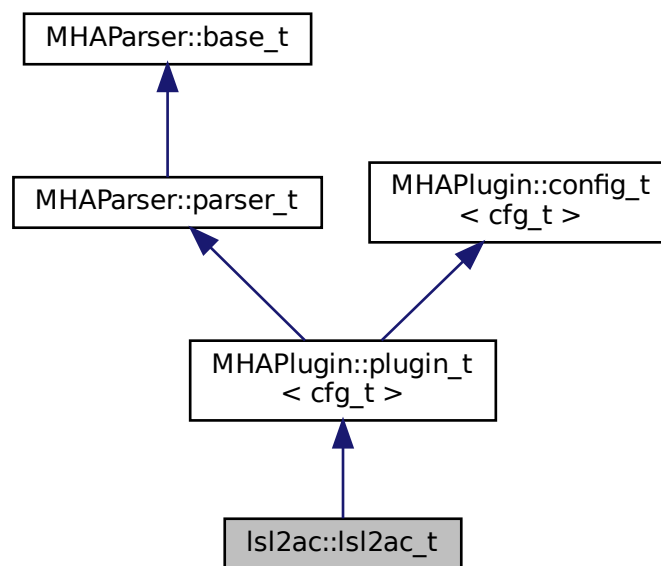

The documentation for this class was generated from the following files:

- **lsl2ac.hh**
- **lsl2ac.cpp**

5.173 lsl2ac::lsl2ac_t Class Reference

Plugin class of **lsl2ac** (p. 98).

Inheritance diagram for `lsl2ac::lsl2ac_t`:

Public Member Functions

- **lsl2ac_t** (`MHA_AC::algo_comm_t &iac, const std::string &configured_name`)
- **void prepare** (`mhaconfig_t &`)
*Prepare constructs the vector of bridge variables and locks the configuration, then calls **update()** (p. 709).*
- **mha_wave_t * process** (`mha_wave_t *s`)

- Processing fct for waveforms.*
- **mha_spec_t * process (mha_spec_t *s)**
Processing fct for spectra.
- void **process ()**
Process function.
- void **release ()**
Release fct.

Private Member Functions

- void **get_all_stream_names ()**
Retrieves all stream names from LSL and fills them into available_streams.
- void **update ()**
Construct new runtime configuration.
- void **setlock (bool lock_)**
Convenience function lock/unlock all config variables.

Private Attributes

- **MHAParser::vstring_t streams** ={"List of LSL streams to be saved, empty for all.", "["]"}
Config variable for list of streams to be saved.
- **MHAParser::bool_t activate** ={"Receive from network?","yes"}
Config variable for activation/deactivation of plugin.
- **MHAParser::kw_t overrun_behavior** ={"How to handle overrun","discard","[discard ignore]"}
Config variable for overrun behavior.
- **MHAParser::int_t buffersize**
Config variable for maximum buffer size of LSL.
- **MHAParser::int_t chunksize**
Config variable for maximum chunk size of LSL.
- **MHAParser::int_t nchannels**
Config variable for number of channels to expect from LSL stream.
- **MHAParser::int_t nsamples**
Config variable for maximum chunk size of LSL.
- **MHAEvents::patchbay_t< Isl2ac_t > patchbay**
Patchbay for configuration callbacks.
- **MHAParser::vstring_mon_t available_streams** ={"List of all available LSL streams"}
Monitor variable containing all available streams.

Additional Inherited Members

5.173.1 Detailed Description

Plugin class of `Isl2ac` (p. 98).

5.173.2 Constructor & Destructor Documentation

5.173.2.1 lsl2ac_t() `lsl2ac::lsl2ac_t::lsl2ac_t (MHA_AC::algo_comm_t & iac, const std::string & configured_name)`

5.173.3 Member Function Documentation

5.173.3.1 prepare() `void lsl2ac::lsl2ac_t::prepare (mhaconfig_t &) [virtual]`

Prepare constructs the vector of bridge variables and locks the configuration, then calls **update()** (p. 709).

Implements **MHAPlugin::plugin_t< cfg_t >** (p. 1201).

5.173.3.2 process() [1/3] `mha_wave_t* lsl2ac::lsl2ac_t::process (mha_wave_t * s) [inline]`

Processing fct for waveforms.

Calls **process(void)** (p. 708).

5.173.3.3 process() [2/3] `mha_spec_t* lsl2ac::lsl2ac_t::process (mha_spec_t * s) [inline]`

Processing fct for spectra.

Calls **process(void)** (p. 708).

5.173.3.4 process() [3/3] `void lsl2ac::lsl2ac_t::process ()`

Process function.

5.173.3.5 release() `void lsl2ac::lsl2ac_t::release () [virtual]`

Release fct.

Unlocks variable name list

Reimplemented from **MHAPPlugin::plugin_t**< **cfg_t** > (p. 1202).

5.173.3.6 get_all_stream_names() `void lsl2ac::lsl2ac_t::get_all_stream_names () [private]`

Retrieves all stream names from LSL and fills them into `available_streams`.

5.173.3.7 update() `void lsl2ac::lsl2ac_t::update () [private]`

Construct new runtime configuration.

5.173.3.8 setlock() `void lsl2ac::lsl2ac_t::setlock (bool lock_) [private]`

Convenience function lock/unlock all config variables.

Parameters

<i>lock</i> ↔	True to lock, False for unlock
—	

5.173.4 Member Data Documentation

5.173.4.1 streams **MHAParser::vstring_t** `lsl2ac::lsl2ac_t::streams ={"List of LSL streams to be saved, empty for all.", "[]"} [private]`

Config variable for list of streams to be saved.

5.173.4.2 activate `MHAParser::bool_t lsl2ac::lsl2ac_t::activate ={"Receive from network?","yes"} [private]`

Config variable for activation/deactivation of plugin.

5.173.4.3 overrun_behavior `MHAParser::kw_t lsl2ac::lsl2ac_t::overrun_behavior ={"How to handle overrun","discard","[discard ignore]"} [private]`

Config variable for overrun behavior.

5.173.4.4 buffersize `MHAParser::int_t lsl2ac::lsl2ac_t::buffersize [private]`

Config variable for maximum buffer size of LSL.

5.173.4.5 chunksize `MHAParser::int_t lsl2ac::lsl2ac_t::chunksize [private]`

Config variable for maximum chunk size of LSL.

5.173.4.6 nchannels `MHAParser::int_t lsl2ac::lsl2ac_t::nchannels [private]`

Config variable for number of channels to expect from LSL stream.

5.173.4.7 nsamples `MHAParser::int_t lsl2ac::lsl2ac_t::nsamples [private]`

Config variable for maximum chunk size of LSL.

5.173.4.8 patchbay `MHAEvents::patchbay_t< Isl2ac_t> Isl2ac::Isl2ac_t::patchbay`
[private]

Patchbay for configuration callbacks.

5.173.4.9 available_streams `MHAParser::vstring_mon_t Isl2ac::Isl2ac_t::available↔
_streams ={"List of all available LSL streams"} [private]`

Monitor variable containing all available streams.

The documentation for this class was generated from the following files:

- **Isl2ac.hh**
- **Isl2ac.cpp**

5.174 Isl2ac::save_var_base_t Class Reference

Inheritance diagram for `Isl2ac::save_var_base_t`:

Public Member Functions

- virtual `~save_var_base_t()`=default
- virtual `Isl::stream_info info()`=0
Get stream info object from stream inlet.
- virtual void `receive_frame()`=0
Receive a samples from Isl and copy to AC space.

5.174.1 Constructor & Destructor Documentation

5.174.1.1 `~save_var_base_t()` `virtual lsl2ac::save_var_base_t::~~save_var_base_t () [virtual], [default]`

5.174.2 Member Function Documentation

5.174.2.1 `info()` `virtual lsl::stream_info lsl2ac::save_var_base_t::info () [pure virtual]`

Get stream info object from stream inlet.

Implemented in `lsl2ac::save_var_t< std::string >` (p. 725), and `lsl2ac::save_var_t< T >` (p. 716).

5.174.2.2 `receive_frame()` `virtual void lsl2ac::save_var_base_t::receive_frame () [pure virtual]`

Receive a samples from lsl and copy to AC space.

Handling of underrun is configuration-dependent

Implemented in `lsl2ac::save_var_t< std::string >` (p. 725), and `lsl2ac::save_var_t< T >` (p. 716).

The documentation for this class was generated from the following file:

- `lsl2ac.hh`

5.175 Isl2ac::save_var_t< T > Class Template Reference

LSL to AC bridge variable.

Inheritance diagram for Isl2ac::save_var_t< T >:

Public Member Functions

- **save_var_t** (const **save_var_t** &)=delete
- **save_var_t** (**save_var_t** &&)=delete

- **save_var_t** (const Isl::stream_info &info_, **MHA_AC::algo_comm_t** &ac_, **overrun_↔ behavior** ob_, int type_, int buflen_, int chunksize_, int nchannels_, int nsamples_)
C'tor of Isl to ac bridge.
- Isl::stream_info **info** () override
Get stream info object from stream inlet.
- void **receive_frame** () override
Receive a samples from Isl and copy to AC space.

Private Member Functions

- void **pull_samples_ignore** ()
Pull new samples, ignore overrun.
- void **pull_samples_discard** ()
Pull new samples as long as there are samples ready for pickup in the LSL buffers.
- void **get_time_correction** ()
Refresh time correction value every 5s.
- void **insert_vars** ()
Insert stream value, time stamp and time offset into ac space.

Private Attributes

- `Isl::stream_inlet` **stream**
LSL stream outlet.
- `std::vector< T >` **buf**
Data buffer of the ac variable.
- `std::vector< double >` **ts_buf**
Timestamp buffer.
- `std::vector< double >` **tc_buf**
Clock correction buffer.
- `MHA_AC::algo_comm_t` & **ac**
Handle to AC space.
- `MHA_AC::comm_var_t` **cv**
Timeseries AC variable.
- `MHA_AC::comm_var_t` **ts**
Timestamp AC variable.
- `MHA_AC::comm_var_t` **tc**
Time correction AC variable.
- `std::string` **ts_name**
Timestamp AC variable name.
- `std::string` **tc_name**
Time correction AC variable name.
- `std::string` **new_name**
Number of new samples AC variable name.
- `std::chrono::time_point< std::chrono::steady_clock >` **tic**
time point of last time correction pull
- `bool` **skip** =false
Should the variable be skipped in future process calls? Only true when error occurred.
- **overrun_behavior** **ob**
Behavior on stream overrun.
- `const std::string` **name**
Name of stream.
- `int32_t` **nchannels**
Number of channels.
- `std::size_t` **nsamples**
Number of samples per channel in the AC variable.
- `std::size_t` **chunksize**
Maximal chunk size of Isl stream.
- `std::size_t` **bufsize**
Total buffer size of the ac variable buffer.
- `int` **n_new_samples**
Number of most recently pulled samples per channel.

5.175.1 Detailed Description

```
template<typename T>
class lsl2ac::save_var_t< T >
```

LSL to AC bridge variable.

5.175.2 Constructor & Destructor Documentation

5.175.2.1 save_var_t() [1/3] `template<typename T >`
`lsl2ac::save_var_t< T >:: save_var_t (`
`const save_var_t< T > &) [delete]`

5.175.2.2 save_var_t() [2/3] `template<typename T >`
`lsl2ac::save_var_t< T >:: save_var_t (`
`save_var_t< T > &&) [delete]`

5.175.2.3 ~save_var_t() `template<typename T >`
`virtual lsl2ac::save_var_t< T >::~~ save_var_t () [virtual], [default]`

5.175.2.4 save_var_t() [3/3] `template<typename T >`
`lsl2ac::save_var_t< T >:: save_var_t (`
`const lsl::stream_info & info_,`
`MHA_AC::algo_comm_t & ac_,`
`overrun_behavior ob_,`
`int type_,`
`int buflen_,`
`int chunksize_,`
`int nchannels_,`
`int nsamples_) [inline]`

C'tor of lsl to ac bridge.

Parameters

<i>name_</i>	Name of LSL stream to be received
<i>info_</i>	LSL stream info object containing metadata
<i>ac_</i>	Handle to ac space
<i>ob_</i>	Overrun behavior. 0=Discard oldest, 1=Ignore
<i>type_</i>	Type tag of the AC variable
<i>buflen_</i>	LSL buffer size
<i>chunksize_</i>	LSL chunk size
<i>nchannels_</i>	Number of channels in the AC variable must be zero or equal to number of channels in LSL stream
<i>nsamples_</i>	Number of samples per channel in the AC variable. Zero means resize as needed

5.175.3 Member Function Documentation

5.175.3.1 operator=() [1/2] `template<typename T >`
`save_var_t& ls12ac::save_var_t< T >::operator= (`
`const save_var_t< T > &) [delete]`

5.175.3.2 operator=() [2/2] `template<typename T >`
`save_var_t& ls12ac::save_var_t< T >::operator= (`
`save_var_t< T > &&) [delete]`

5.175.3.3 info() `template<typename T >`
`ls1::stream_info ls12ac::save_var_t< T >::info () [inline], [override], [virtual]`

Get stream info object from stream inlet.

Implements `ls12ac::save_var_base_t` (p. 712).

5.175.3.4 receive_frame() `template<typename T >`

```
void lsl2ac::save_var_t< T >::receive_frame ( ) [inline], [override], [virtual]
```

Receive a samples from lsl and copy to AC space.

Handling of underrun is configuration-dependent

Implements `lsl2ac::save_var_base_t` (p. 712).

5.175.3.5 pull_samples_ignore() `template<typename T >`

```
void lsl2ac::save_var_t< T >::pull_samples_ignore ( ) [inline], [private]
```

Pull new samples, ignore overrun.

If `nsamples=0`, leaves the buffers in a state where the newest samples are at the beginning of the buffers, the state of the older samples is undefined and `n_new_samples` contains the number of new samples per channel. If `nsamples` is non-zero, the buffers are rotated so the oldest samples are the first in the buffer and `n_new_samples` contains the number of new samples per channel.

5.175.3.6 pull_samples_discard() `template<typename T >`

```
void lsl2ac::save_var_t< T >::pull_samples_discard ( ) [inline], [private]
```

Pull new samples as long as there are samples ready for pickup in the LSL buffers.

If `nsamples=0`, leaves the buffers in a state where the newest samples are at the beginning of the buffers, the state of the older samples is undefined and `n_new_samples` contains total number of new samples per channel. If `nsamples` is non-zero, the buffers are rotated so the oldest samples come first. `n_samples_new` then contains the total number of new samples per channel. If `n_new_samples` is larger than the number of samples in the AC variable that means samples had be discarded.

5.175.3.7 get_time_correction() `template<typename T >`

```
void lsl2ac::save_var_t< T >::get_time_correction ( ) [inline], [private]
```

Refresh time correction value every 5s.

5.175.3.8 insert_vars() `template<typename T >`

```
void lsl2ac::save_var_t< T >::insert_vars ( ) [inline], [private]
```

Insert stream value, time stamp and time offset into ac space.

5.175.4 Member Data Documentation

5.175.4.1 stream `template<typename T >`
`lsl::stream_inlet lsl2ac::save_var_t< T >::stream [private]`

LSL stream outlet.

Interface to lsl

5.175.4.2 buf `template<typename T >`
`std::vector<T> lsl2ac::save_var_t< T >::buf [private]`

Data buffer of the ac variable.

5.175.4.3 ts_buf `template<typename T >`
`std::vector<double> lsl2ac::save_var_t< T >::ts_buf [private]`

Timestamp buffer.

5.175.4.4 tc_buf `template<typename T >`
`std::vector<double> lsl2ac::save_var_t< T >::tc_buf [private]`

Clock correction buffer.

5.175.4.5 ac `template<typename T >`
`MHA_AC::algo_comm_t& lsl2ac::save_var_t< T >::ac [private]`

Handle to AC space.

5.175.4.6 cv `template<typename T >``MHA_AC::comm_var_t lsl2ac::save_var_t< T >::cv [private]`

Timeseries AC variable.

5.175.4.7 ts `template<typename T >``MHA_AC::comm_var_t lsl2ac::save_var_t< T >::ts [private]`

Timestamp AC variable.

5.175.4.8 tc `template<typename T >``MHA_AC::comm_var_t lsl2ac::save_var_t< T >::tc [private]`

Time correction AC variable.

5.175.4.9 ts_name `template<typename T >``std::string lsl2ac::save_var_t< T >::ts_name [private]`

Timestamp AC variable name.

5.175.4.10 tc_name `template<typename T >``std::string lsl2ac::save_var_t< T >::tc_name [private]`

Time correction AC variable name.

5.175.4.11 new_name `template<typename T >``std::string lsl2ac::save_var_t< T >::new_name [private]`

Number of new samples AC variable name.

5.175.4.12 tic `template<typename T >`
`std::chrono::time_point<std::chrono::steady_clock> ls12ac::save_var_t< T >::tic`
`[private]`

time point of last time correction pull

5.175.4.13 skip `template<typename T >`
`bool ls12ac::save_var_t< T >::skip =false [private]`

Should the variable be skipped in future process calls? Only true when error occurred.

5.175.4.14 ob `template<typename T >`
`overrun_behavior ls12ac::save_var_t< T >::ob [private]`

Behavior on stream overrun.

5.175.4.15 name `template<typename T >`
`const std::string ls12ac::save_var_t< T >::name [private]`

Name of stream.

Must be saved separately because the stream info might be unrecoverable in error cases

5.175.4.16 nchannels `template<typename T >`
`int32_t ls12ac::save_var_t< T >::nchannels [private]`

Number of channels.

5.175.4.17 nsamples `template<typename T >`
`std::size_t ls12ac::save_var_t< T >::nsamples [private]`

Number of samples per channel in the AC variable.

Zero means resize as needed.

5.175.4.18 chunksize `template<typename T >`
`std::size_t lsl2ac::save_var_t< T >::chunksize [private]`

Maximal chunk size of lsl stream.

5.175.4.19 bufsize `template<typename T >`
`std::size_t lsl2ac::save_var_t< T >::bufsize [private]`

Total buffer size of the ac variable buffer.

`nsamples*nchannels` if `nsamples` is set, `chunksize*nchannels` otherwise if `chunksize` is set, `nchannels` if neither `nsamples` and `chunksize` are set.

5.175.4.20 n_new_samples `template<typename T >`
`int lsl2ac::save_var_t< T >::n_new_samples [private]`

Number of most recently pulled samples per channel.

The documentation for this class was generated from the following file:

- **lsl2ac.hh**

5.176 lsl2ac::save_var_t< std::string > Class Reference

Specialication for marker streams.

Inheritance diagram for `lsl2ac::save_var_t< std::string >`:

Public Member Functions

time point of last time correction pull
- `bool skip = false`
Should the variable be skipped in future process calls? Only true when error occurred.
- `overrun_behavior ob`
Behavior on stream overrun.
- `const std::string name`
Name of stream.

5.176.1 Detailed Description

Specialication for marker streams.

5.176.2 Constructor & Destructor Documentation

5.176.2.1 `save_var_t()` [1/3] `ls12ac::save_var_t< std::string >:: save_var_t (`
`const save_var_t< std::string > &) [delete]`

5.176.2.2 `save_var_t()` [2/3] `ls12ac::save_var_t< std::string >:: save_var_t (`
`save_var_t< std::string > &&) [delete]`

5.176.2.3 `~save_var_t()` `virtual ls12ac::save_var_t< std::string >::~~ save_var_t`
`() [virtual], [default]`

```
5.176.2.4 save_var_t() [3/3] ls12ac::save_var_t< std::string >:: save_var_t (  
    const lsl::stream_info & info_,  
    MHA_AC::algo_comm_t & ac_,  
    overrun_behavior ob_,  
    int buflen_,  
    int chunksize_,  
    int strlen_ ) [inline]
```

C'tor of lsl to ac bridge.

Parameters

<code>name_</code>	Name of LSL stream to be received
<code>info_</code>	LSL stream info object containing metadata
<code>ac_</code>	Handle to ac space
<code>ob_</code>	Overrun behavior. 0=Discard oldest, 1=Ignore
<code>buflen_</code>	LSL buffer size
<code>chunksize_↔</code>	LSL chunk size
<code>strlen_</code>	Length string buffer.

5.176.3 Member Function Documentation

5.176.3.1 `operator=()` [1/2] `save_var_t& lsl2ac::save_var_t< std::string >::operator=`
 (
 const `save_var_t< std::string > &`) [delete]

5.176.3.2 `operator=()` [2/2] `save_var_t& lsl2ac::save_var_t< std::string >::operator=`
 (
 `save_var_t< std::string > &&`) [delete]

5.176.3.3 `info()` `lsl::stream_info lsl2ac::save_var_t< std::string >::info ()` [inline],
 [override], [virtual]

Get stream info object from stream inlet.

Implements `lsl2ac::save_var_base_t` (p. 712).

5.176.3.4 receive_frame() `void ls12ac::save_var_t< std::string >::receive_frame () [inline], [override], [virtual]`

Receive a samples from Isl and copy to AC space.

Handling of underrun is configuration-dependent

Implements `ls12ac::save_var_base_t` (p. 712).

5.176.3.5 copy_string_safe() `std::size_t ls12ac::save_var_t< std::string >::copy←_string_safe () [inline], [private]`

Copy string to AC buffer, stop at the latest at buffer end, make sure that the string is always zero-terminated.

Returns

The number of characters copied into the AC buffer, also the number entries in the AC variable

5.176.3.6 pull_samples_ignore() `void ls12ac::save_var_t< std::string >::pull←samples_ignore () [inline], [private]`

Pull new samples, ignore overrun, i.e.

only pull one sample from the buffer, do not check if there are newer ones waiting

5.176.3.7 pull_samples_discard() `void ls12ac::save_var_t< std::string >::pull←samples_discard () [inline], [private]`

Pull new samples as long as there are samples ready for pickup in the LSL buffers.

Overwrite old markers

5.176.3.8 get_time_correction() `void ls12ac::save_var_t< std::string >::get←time_correction () [inline], [private]`

Refresh time correction value every 5s.

5.176.3.9 insert_vars() void lsl2ac::save_var_t< std::string >::insert_vars ()
[inline], [private]

Insert stream value, time stamp and time offset into ac space.

5.176.4 Member Data Documentation

5.176.4.1 stream lsl::stream_inlet lsl2ac::save_var_t< std::string >::stream
[private]

LSL stream outlet.

Interface to lsl

5.176.4.2 str std::string lsl2ac::save_var_t< std::string >::str [private]

Temporary storage for marker string.

5.176.4.3 buf std::vector<char> lsl2ac::save_var_t< std::string >::buf [private]

Data buffer of the ac variable.

5.176.4.4 ts double lsl2ac::save_var_t< std::string >::ts [private]

Timestamp.

5.176.4.5 ac MHA_AC::algo_comm_t& lsl2ac::save_var_t< std::string >::ac [private]

Handle to AC space.

5.176.4.6 cv `MHA_AC::comm_var_t ls12ac::save_var_t< std::string >::cv` [private]

Timeseries AC variable.

5.176.4.7 tc `double ls12ac::save_var_t< std::string >::tc =0.0` [private]

Current time correction.

5.176.4.8 ts_name `std::string ls12ac::save_var_t< std::string >::ts_name` [private]

Timestamp AC variable name.

5.176.4.9 tc_name `std::string ls12ac::save_var_t< std::string >::tc_name` [private]

Time correction AC variable name.

5.176.4.10 new_name `std::string ls12ac::save_var_t< std::string >::new_name`
[private]

Number of new samples AC variable name.

5.176.4.11 tic `std::chrono::time_point<std::chrono::steady_clock> ls12ac::save_↔
var_t< std::string >::tic` [private]

time point of last time correction pull

5.176.4.12 skip `bool` `ls12ac::save_var_t< std::string >::skip =false` [private]

Should the variable be skipped in future process calls? Only true when error occurred.

5.176.4.13 ob `overrun_behavior` `ls12ac::save_var_t< std::string >::ob` [private]

Behavior on stream overrun.

5.176.4.14 name `const std::string` `ls12ac::save_var_t< std::string >::name` [private]

Name of stream.

Must be saved separately because the stream info might be unrecoverable in error cases

The documentation for this class was generated from the following file:

- `ls12ac.hh`

5.177 matlab_wrapper::callback Class Reference

Utility class connecting a `user_config_t` instance to its corresponding configuration parser.

Public Member Functions

- `callback (matlab_wrapper_t *parent_, user_config_t *user_config_, MHAParser↔
::mfloat_t *var_)`
Ctor.
- `void on_writeaccess ()`
Write access callback.

Private Attributes

- `user_config_t * user_config`
Ptr to user_config_t.
- `MHAParser::mfloat_t * var`
Ptr to parser.
- `matlab_wrapper_t * parent`
Ptr to parent plugin.

5.177.1 Detailed Description

Utility class connecting a `user_config_t` instance to its corresponding configuration parser.

Provides the callback. Every time the a user defined configuration parser is changed, this class makes sure that the corresponding 'matlab-side' struct is also changed and a new real time config is created and pushed.

5.177.2 Constructor & Destructor Documentation

5.177.2.1 callback() `matlab_wrapper::callback::callback (`
`matlab_wrapper_t * parent_,`
`user_config_t * user_config_,`
`MHAParser::mfloat_t * var_)`

Ctor.

Parameters

<code>parent_</code>	Ptr to the parent parser. Used to signal finished change.
<code>user_↔ config_</code>	Ptr to <code>user_config_t</code> struct holding the 'matlab side' of the configuration variable
<code>var_</code>	Ptr to the configuration parser corresponding to <code>user_config_</code>

5.177.3 Member Function Documentation

5.177.3.1 on_writeaccess() `void matlab_wrapper::callback::on_writeaccess ()`

Write access callback.

To be called on every writeaccess of `*var`. Synchronises `*var` and `*user_config`.

5.177.4 Member Data Documentation

5.178 matlab_wrapper::matlab_wrapper_rt_cfg_t Class Reference 31

5.177.4.1 user_config user_config_t* matlab_wrapper::callback::user_config [private]

Ptr to user_config_t.

5.177.4.2 var MHAParser::mfloat_t* matlab_wrapper::callback::var [private]

Ptr to parser.

5.177.4.3 parent matlab_wrapper_t* matlab_wrapper::callback::parent [private]

Ptr to parent plugin.

The documentation for this class was generated from the following files:

- matlab_wrapper.hh
- matlab_wrapper.cpp

5.178 matlab_wrapper::matlab_wrapper_rt_cfg_t Class Reference

Thin wrapper around the emxArray containing the user defined configuration variables.

Public Member Functions

- **matlab_wrapper_rt_cfg_t** (emxArray_user_config_t *user_config_)
Ctor of the real time configuration class.
- **~matlab_wrapper_rt_cfg_t** ()
Dtor.

Public Attributes

- emxArray_user_config_t * **user_config**
User configuration to be used in the process callback.

5.178.1 Detailed Description

Thin wrapper around the emxArray containing the user defined configuration variables.

This wrapper holds a copy of the user configuration which is used by the process callback. On write access to a variable, the user configuration is changed and a new copy is created and exchanged in a real time safe manner.

5.178.2 Constructor & Destructor Documentation

5.178.2.1 matlab_wrapper_rt_cfg_t() `matlab_wrapper::matlab_wrapper_rt_cfg_t::matlab↔
_wrapper_rt_cfg_t (`
 `emxArray_user_config_t * user_config_) [explicit]`

Ctor of the real time configuration class.

Creates a local copy of the user config

Parameters

<code>user_↔ config_</code>	Pointer to the array containing the user config
---------------------------------	---

5.178.2.2 ~matlab_wrapper_rt_cfg_t() `matlab_wrapper::matlab_wrapper_rt_cfg_t↔
::~~matlab_wrapper_rt_cfg_t ()`

Dtor.

Calls the appropriate c-style destructors of the emx_ types

5.178.3 Member Data Documentation

5.178.3.1 user_config emxArray_user_config_t* matlab_wrapper::matlab_wrapper_rt_↔
cfg_t::user_config

User configuration to be used in the process callback.

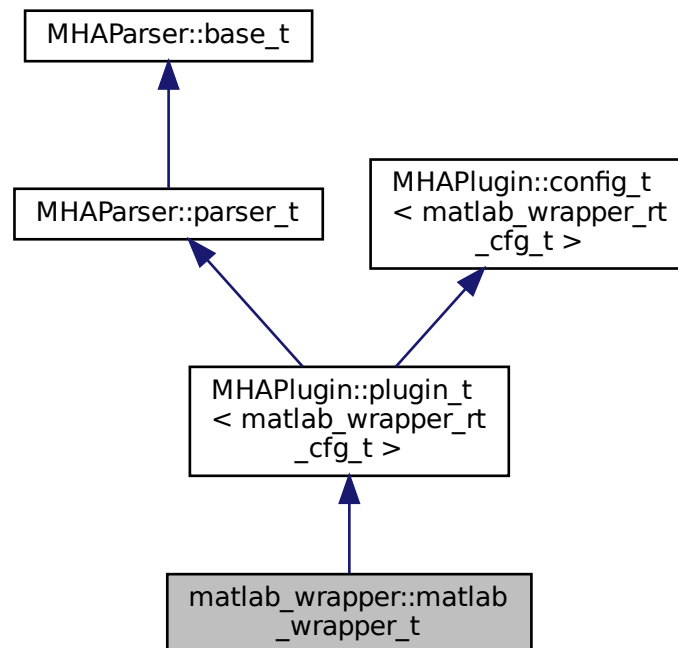

The documentation for this class was generated from the following files:

- `matlab_wrapper.hh`
- `matlab_wrapper.cpp`

5.179 matlab_wrapper::matlab_wrapper_t Class Reference

Matlab wrapper plugin interface class.

Inheritance diagram for `matlab_wrapper::matlab_wrapper_t`:

Classes

- class **wrapped_plugin_t**
Wrapper class around the matlab-generated library.

Public Member Functions

Additional Inherited Members

5.179.1 Detailed Description

Matlab wrapper plugin interface class.

5.179.2 Constructor & Destructor Documentation

5.179.2.1 matlab_wrapper_t() `matlab_wrapper::matlab_wrapper_t::matlab_wrapper_t (MHA_AC::algo_comm_t & iac, const std::string & configured_name)`

Ctor of the plugin interface class.

Parameters

<i>iac</i>	Handle to ac space
<i>configured_name</i>	Configured name of this plugin

5.179.3 Member Function Documentation

5.179.3.1 process() [1/4] `void matlab_wrapper::matlab_wrapper_t::process (mha_wave_t * sin, mha_wave_t ** sout)`

Pure waveform processing.

Parameters

<i>sin</i>	input waveform signal
<i>sout</i>	output waveform signal

5.179.3.2 process() [2/4] `void matlab_wrapper::matlab_wrapper_t::process (`
`mha_spec_t * sin,`
`mha_spec_t ** sout)`

Pure spectrum processing.

Parameters

<i>sin</i>	input spectrum signal
<i>sout</i>	output spectrum signal

5.179.3.3 process() [3/4] `void matlab_wrapper::matlab_wrapper_t::process (`
`mha_wave_t * sin,`
`mha_spec_t ** sout)`

Signal processing with domain transformation from waveform to spectrum.

Parameters

<i>sin</i>	input waveform signal
<i>sout</i>	output spectrum signal

5.179.3.4 process() [4/4] `void matlab_wrapper::matlab_wrapper_t::process (`
`mha_spec_t * sin,`
`mha_wave_t ** sout)`

Signal processing with domain transformation from spectrum to waveform.

Parameters

<i>sin</i>	input spectrum signal
<i>sout</i>	output waveform signal

5.179.3.5 prepare() `void matlab_wrapper::matlab_wrapper_t::prepare (`
`mhaconfig_t & signal_info) [virtual]`

Prepare callback.

Parameters

<i>signal_info</i>	struct holding the input/output signal dimensions
--------------------	---

Implements **MHAPIugin::plugin_t**< **matlab_wrapper_rt_cfg_t** > (p. 1201).

5.179.3.6 release() void matlab_wrapper::matlab_wrapper_t::release () [virtual]

Release callback.

Reimplemented from **MHAPIugin::plugin_t**< **matlab_wrapper_rt_cfg_t** > (p. 1202).

5.179.3.7 insert_monitors() void matlab_wrapper::matlab_wrapper_t::insert_monitors () [private]

5.179.3.8 update_monitors() void matlab_wrapper::matlab_wrapper_t::update_monitors () [private]

5.179.3.9 insert_config_vars() void matlab_wrapper::matlab_wrapper_t::insert_config_vars () [private]

5.179.3.10 load_lib() void matlab_wrapper::matlab_wrapper_t::load_lib () [private]

Create new library wrapper and load library.

To be called write access to library_name.

5.179.3.11 update() void matlab_wrapper::matlab_wrapper_t::update () [private]

Create new real time safe user config from user config.

Called by the custom callbacks.

5.179.4 Member Data Documentation

5.179.4.1 callback friend matlab_wrapper::matlab_wrapper_t::callback [private]

5.179.4.2 library_name MHAParser::string_t matlab_wrapper::matlab_wrapper_t↔
::library_name {"Name of matlab generated library",""} [private]

Configuration variable holding the file name of the matlab generated library.

5.179.4.3 patchbay MHAEvents::patchbay_t< matlab_wrapper_t> matlab_wrapper↔
::matlab_wrapper_t::patchbay [private]

Patchbay for the interface plugins.

5.179.4.4 cb_patchbay MHAEvents::patchbay_t< callback> matlab_wrapper::matlab_↔
wrapper_t::cb_patchbay [private]

Patchbay for the custom callbacks.

Can use normal patchbay bc/ of the interface of patchbay_t

5.179.4.5 plug std::unique_ptr< wrapped_plugin_t> matlab_wrapper::matlab_wrapper↔
_t::plug [private]

Unique ptr holding the instance of the plugin wrapper class.

5.179.4.6 vars std::deque< MHAParser::mfloat_t> matlab_wrapper::matlab_wrapper_t↔
::vars [private]

Deque holding the user defined configuration variables.

Deque is used because we need an indexable container that does not invalidate pointers

5.179.4.7 callbacks `std::deque< callback> matlab_wrapper::matlab_wrapper_t::callbacks`
[private]

Deque holding the callbacks for the user defined variables' write access.

Deque is used because we need an indexable container that does not invalidate pointers

5.179.4.8 monitors `std::deque< MHAParser::mfloat_mon_t> matlab_wrapper::matlab_↵
wrapper_t::monitors` [private]

Deque holding the monitors corresponding to user state.

Deque is used because we need an indexable container that does not invalidate pointers.

The documentation for this class was generated from the following files:

- **matlab_wrapper.hh**
- **matlab_wrapper.cpp**

5.180 matlab_wrapper::matlab_wrapper_t::wrapped_plugin_t Class Reference

Wrapper class around the matlab-generated library.

Public Member Functions

- **wrapped_plugin_t** ()=delete
- **wrapped_plugin_t** (const char *name_)
Ctor.

Prepare callback.
- void **release** ()
Release callback.

Public Attributes

- `emxArray_user_config_t * user_config =nullptr`
Ptr to user config array.
- `emxArray_user_config_t * state =nullptr`
Ptr to state array.

Private Attributes

- **dynamiclib_t library_handle**
Handle to matlab generated shared library.
- `void(* fcn_terminate)() =nullptr`
Handle to matlab generated cleanup function.
- `void(* fcn_init)(emxArray_user_config_t *, emxArray_user_config_t *) =nullptr`
Handle to matlab generated init function.
- `void(* fcn_process_ww)(const emxArray_real_T *, const signal_dimensions_t *, const emxArray_user_config_t *, emxArray_user_config_t *, emxArray_real_T *) =nullptr`
Handle to matlab generated wave to wave process function.
- `void(* fcn_process_ss)(const emxArray_creal_T *, const signal_dimensions_t *, const emxArray_user_config_t *, emxArray_user_config_t *, emxArray_creal_T *) =nullptr`
Handle to matlab generated spectrum to spectrum process function.
- `void(* fcn_process_ws)(const emxArray_real_T *, const signal_dimensions_t *, const emxArray_user_config_t *, emxArray_user_config_t *, emxArray_creal_T *) =nullptr`
Handle to matlab generated wave to spectrum process function.
- `void(* fcn_process_sw)(const emxArray_creal_T *, const signal_dimensions_t *, const emxArray_user_config_t *, emxArray_user_config_t *, emxArray_real_T *) =nullptr`
Handle to matlab generated spectrum to wave process function.
- `void(* fcn_prepare)(signal_dimensions_t *, emxArray_user_config_t *, emxArray_↔ user_config_t *) =nullptr`
Handle to matlab generated prepare function.
- `void(* fcn_release)() =nullptr`
- `signal_dimensions_t signal_dimensions {0,'U',0,0,0,0}`
Signal dimensions.
- `emxArray_real_T * wave_in =nullptr`
Ptr to emxArray holding the input signal.
- `emxArray_real_T * wave_out =nullptr`
Ptr to emxArray holding the output signal.
- `emxArray_creal_T * spec_in =nullptr`
Ptr to emxArray holding the input signal.
- `emxArray_creal_T * spec_out =nullptr`
Ptr to emxArray holding the output signal.
- `std::unique_ptr< MHASignal::waveform_t > mha_wave_out`
MHA waveform holding the output signal.
- `std::unique_ptr< MHASignal::spectrum_t > mha_spec_out`
MHA waveform holding the output signal.

5.180.1 Detailed Description

Wrapper class around the matlab-generated library.

5.180.2 Constructor & Destructor Documentation

5.180.2.1 wrapped_plugin_t() [1/2] matlab_wrapper::matlab_wrapper_t::wrapped_↔ plugin_t::wrapped_plugin_t () [delete]

5.180.2.2 wrapped_plugin_t() [2/2] matlab_wrapper::matlab_wrapper_t::wrapped_↔ plugin_t::wrapped_plugin_t (const char * name_) [explicit]

Ctor.

Opens matlab-generated library and resolves functions

Parameters

<i>name_↔</i>	file name of shared library
<i>_</i>	

5.180.2.3 ~wrapped_plugin_t() matlab_wrapper::matlab_wrapper_t::wrapped_plugin_t↔ ::~wrapped_plugin_t () [virtual]

Dtor.

5.180.3 Member Function Documentation

5.180.3.1 process_ww() `mha_wave_t * matlab_wrapper::matlab_wrapper_t::wrapped_↔
plugin_t::process_ww (`
 `mha_wave_t * s,`
 `emxArray_user_config_t * user_config_)`

Process callback.

Converts mha-type wave to matlab array and calls wrapped process callback, then convert output to mha type

Parameters

<code>s</code>	input/output signal
<code>user_↔ config_</code>	Ptr to user configuration array

5.180.3.2 process_ss() `mha_spec_t * matlab_wrapper::matlab_wrapper_t::wrapped_↔
plugin_t::process_ss (`
 `mha_spec_t * s,`
 `emxArray_user_config_t * user_config_)`

Process callback.

Converts mha-type spectrum to matlab array and calls wrapped process callback, then convert output to mha type

Parameters

<code>s</code>	input/output signal
<code>user_↔ config_</code>	Ptr to user configuration array

5.180.3.3 process_ws() `mha_spec_t * matlab_wrapper::matlab_wrapper_t::wrapped_↔
plugin_t::process_ws (`
 `mha_wave_t * s,`
 `emxArray_user_config_t * user_config_)`

Process callback.

Converts mha-type wave to matlab array and calls wrapped process callback, then convert output to mha type

Parameters

<i>s</i>	input/output signal
<i>user_↔ config_</i>	Ptr to user configuration array

5.180.3.4 process_sw() `mha_wave_t * matlab_wrapper::matlab_wrapper_t::wrapped_↔
plugin_t::process_sw (`
 mha_spec_t * *s*,
 emxArray_user_config_t * *user_config_*)

Process callback.

Converts mha-type spectrum to matlab array and calls wrapped process callback, then convert output to mha type

Parameters

<i>s</i>	input/output signal
<i>user_↔ config_</i>	Ptr to user configuration array

5.180.3.5 prepare() `void matlab_wrapper::matlab_wrapper_t::wrapped_plugin_t::prepare`
 (
 mhaconfig_t & *config*)

Prepare callback.

Calls wrapped prepare function if necessary and determines output signal dimensions

5.180.3.6 release() `void matlab_wrapper::matlab_wrapper_t::wrapped_plugin_t::release`
 ()

Release callback.

Cleans up io arrays and calls wrapped release if necessary.

5.180.4 Member Data Documentation

5.180.4.1 user_config `emxArray_user_config_t* matlab_wrapper::matlab_wrapper_t↔
::wrapped_plugin_t::user_config =nullptr`

Ptr to user config array.

5.180.4.2 state `emxArray_user_config_t* matlab_wrapper::matlab_wrapper_t::wrapped↔
_plugin_t::state =nullptr`

Ptr to state array.

5.180.4.3 library_handle `dynamiclib_t matlab_wrapper::matlab_wrapper_t::wrapped↔
plugin_t::library_handle [private]`

Handle to matlab generated shared library.

5.180.4.4 fcn_terminate `void(* matlab_wrapper::matlab_wrapper_t::wrapped_plugin_t↔
::fcn_terminate) () =nullptr [private]`

Handle to matlab generated cleanup function.

5.180.4.5 fcn_init `void(* matlab_wrapper::matlab_wrapper_t::wrapped_plugin_t::fcn↔
init) (emxArray_user_config_t *, emxArray_user_config_t *) =nullptr [private]`

Handle to matlab generated init function.

5.180.4.6 fcn_process_ww void(* matlab_wrapper::matlab_wrapper_t::wrapped_plugin_t::fcn_process_ww) (const mxArray_real_T *, const signal_dimensions_t *, const mxArray_user_config_t *, mxArray_user_config_t *, mxArray_real_T *) =nullptr [private]

Handle to matlab generated wave to wave process function.

5.180.4.7 fcn_process_ss void(* matlab_wrapper::matlab_wrapper_t::wrapped_plugin_t::fcn_process_ss) (const mxArray_creal_T *, const signal_dimensions_t *, const mxArray_user_config_t *, mxArray_user_config_t *, mxArray_creal_T *) =nullptr [private]

Handle to matlab generated spectrum to spectrum process function.

5.180.4.8 fcn_process_ws void(* matlab_wrapper::matlab_wrapper_t::wrapped_plugin_t::fcn_process_ws) (const mxArray_real_T *, const signal_dimensions_t *, const mxArray_user_config_t *, mxArray_user_config_t *, mxArray_creal_T *) =nullptr [private]

Handle to matlab generated wave to spectrum process function.

5.180.4.9 fcn_process_sw void(* matlab_wrapper::matlab_wrapper_t::wrapped_plugin_t::fcn_process_sw) (const mxArray_creal_T *, const signal_dimensions_t *, const mxArray_user_config_t *, mxArray_user_config_t *, mxArray_real_T *) =nullptr [private]

Handle to matlab generated spectrum to wave process function.

5.180.4.10 fcn_prepare void(* matlab_wrapper::matlab_wrapper_t::wrapped_plugin_t::fcn_prepare) (signal_dimensions_t *, mxArray_user_config_t *, mxArray_user_config_t *) =nullptr [private]

Handle to matlab generated prepare function.

5.180.4.11 fcn_release void(* matlab_wrapper::matlab_wrapper_t::wrapped_plugin_t↔
::fcn_release) () =nullptr [private]

5.180.4.12 signal_dimensions signal_dimensions_t matlab_wrapper::matlab_wrapper_↔
t::wrapped_plugin_t::signal_dimensions {0,'U',0,0,0,0} [private]

Signal dimensions.

Matlab-equivalent to mha_config_t

5.180.4.13 wave_in emxArray_real_T* matlab_wrapper::matlab_wrapper_t::wrapped_↔
plugin_t::wave_in =nullptr [private]

Ptr to emxArray holding the input signal.

5.180.4.14 wave_out emxArray_real_T* matlab_wrapper::matlab_wrapper_t::wrapped_↔
plugin_t::wave_out =nullptr [private]

Ptr to emxArray holding the output signal.

5.180.4.15 spec_in emxArray_creal_T* matlab_wrapper::matlab_wrapper_t::wrapped_↔
plugin_t::spec_in =nullptr [private]

Ptr to emxArray holding the input signal.

5.180.4.16 spec_out emxArray_creal_T* matlab_wrapper::matlab_wrapper_t::wrapped_↔
plugin_t::spec_out =nullptr [private]

Ptr to emxArray holding the output signal.

5.181 matlab_wrapper::types< T > Struct Template Reference 747

5.180.4.17 mha_wave_out `std::unique_ptr< MHASignal::waveform_t> matlab_wrapper↔
::matlab_wrapper_t::wrapped_plugin_t::mha_wave_out [private]`

MHA waveform holding the output signal.

5.180.4.18 mha_spec_out `std::unique_ptr< MHASignal::spectrum_t> matlab_wrapper↔
::matlab_wrapper_t::wrapped_plugin_t::mha_spec_out [private]`

MHA waveform holding the output signal.

5.186 mconv::MConv Class Reference

Inheritance diagram for mconv::MConv:

Public Member Functions

- **MConv** (**MHA_AC::algo_comm_t** &iac, const std::string &algoname)
Plugin constructor.
- void **prepare** (**mhaconfig_t** &mhaconfig)
Prepare this plugin for processing.
- void **release** ()
- **mha_wave_t*** **process** (**mha_wave_t***)

Private Member Functions

- void **update** ()
*Update is needed only once, since this plugin allows only change of irs after **prepare()** (p. 755).*
- void **update_irs** ()
*This function updates the irs without allowing a change of its size after **prepare()** (p. 755).*

Private Attributes

- **MHAParser::int_t nchannels_out**
Number of output channels to produce.
- **MHAParser::vint_t inch**
Vector of input channel indices.
- **MHAParser::vint_t outch**
Vector of output channel indices.
- **MHAParser::mfloat_t irs**
Impulse responses, one per row.
- unsigned int **nchannels_in**
Number of input channels, set during prepare.
- unsigned int **fragsize**
Fragsize, set during prepare, is used as the partition length in the partitioned convolution.
- **MHAEvents::patchbay_t< MConv > patchbay**

Additional Inherited Members

5.186.1 Detailed Description

class implements plugin for partitioned convolution. A matrix of impulse responses, filtering n input channels to m output channels, is supported.

5.186.2 Constructor & Destructor Documentation

5.186.2.1 MConv() `mconv::MConv::MConv (`
 MHA_AC::algo_comm_t & *iac*,
 const std::string & *algoname*)

Plugin constructor.

Parameters

<i>iac</i>	handle and function pointers for algorithm communication
<i>configured_name</i>	The name by which e.g an mhachain refers to this instance of the mconv plugin

5.186.3 Member Function Documentation

5.186.3.1 prepare() `void mconv::MConv::prepare (mhaconfig_t & mhaconfig) [virtual]`

Prepare this plugin for processing.

Parameters

<i>mhaconfig</i>	Configuration for this plugin (Input/Output parameter) Sample rate, fragment size, number of channels are detailed here.
------------------	--

Implements **MHAPlugin::plugin_t**< **MHAFilter::partitioned_convolution_t** > (p. 1201).

5.186.3.2 release() `void mconv::MConv::release () [virtual]`

Reimplemented from **MHAPlugin::plugin_t**< **MHAFilter::partitioned_convolution_t** > (p. 1202).

5.186.3.3 process() `mha_wave_t * mconv::MConv::process (mha_wave_t * s_in)`

5.186.3.4 update() `void mconv::MConv::update () [private]`

Update is needed only once, since this plugin allows only change of irs after **prepare()** (p. 755).

5.186.3.5 update_irs() `void mconv::MConv::update_irs () [private]`

This function updates the irs without allowing a change of its size after **prepare()** (p. 755).

5.186.4 Member Data Documentation

5.186.4.1 `nchannels_out` `MHAParser::int_t` `mconv::MConv::nchannels_out` [private]

Number of output channels to produce.

5.186.4.2 `inch` `MHAParser::vint_t` `mconv::MConv::inch` [private]

Vector of input channel indices.

Each element in this vector identifies the input channel to which to apply the corresponding impulse response in `irs`.

5.186.4.3 `outch` `MHAParser::vint_t` `mconv::MConv::outch` [private]

Vector of output channel indices.

Each element in this vector identifies the output channel to which the result of filtering with the corresponding impulse response in `irs` is mixed.

5.186.4.4 `irs` `MHAParser::mfloat_t` `mconv::MConv::irs` [private]

Impulse responses, one per row.

For each row, the corresponding element of `inch` identifies the source channel, and the corresponding element of `outch` identifies the target channel.

5.186.4.5 `nchannels_in` `unsigned int` `mconv::MConv::nchannels_in` [private]

Number of input channels, set during prepare.

5.186.4.6 `fragsize` `unsigned int` `mconv::MConv::fragsize` [private]

Fragsize, set during prepare, is used as the partition length in the partitioned convolution.

5.186.4.7 patchbay `MHAEvents::patchbay_t` < `MConv` > `mconv::MConv::patchbay` [private]

The documentation for this class was generated from the following file:

- `mconv.cpp`

5.187 MHA_AC::ac2matrix_helper_t Class Reference

5.187.1 Constructor & Destructor Documentation

5.187.1.1 ac2matrix_helper_t() `MHA_AC::ac2matrix_helper_t::ac2matrix_helper_t (
 algo_comm_t & iac,
 const std::string & iname)`

5.187.2 Member Function Documentation

5.187.2.1 getvar() `void MHA_AC::ac2matrix_helper_t::getvar ()`

5.187.3 Member Data Documentation

5.187.3.1 ac `algo_comm_t* MHA_AC::ac2matrix_helper_t::ac`

5.187.3.2 name `std::string MHA_AC::ac2matrix_helper_t::name`

5.187.3.3 username `std::string MHA_AC::ac2matrix_helper_t::username`

5.187.3.4 size `MHASignal::uint_vector_t MHA_AC::ac2matrix_helper_t::size`

5.187.3.5 is_complex `bool MHA_AC::ac2matrix_helper_t::is_complex`

5.187.3.6 acvar `comm_var_t MHA_AC::ac2matrix_helper_t::acvar` [protected]

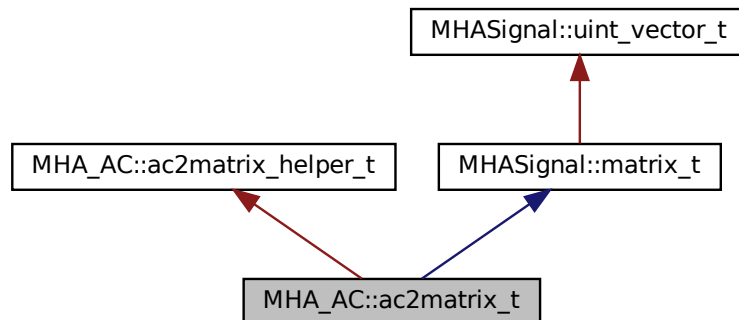

The documentation for this class was generated from the following files:

- `mha_algo_comm.hh`
- `mha_algo_comm.cpp`

5.188 MHA_AC::ac2matrix_t Class Reference

Copy AC variable to a matrix.

Inheritance diagram for MHA_AC::ac2matrix_t:

Public Member Functions

- **ac2matrix_t** (`algo_comm_t & ac`, `const std::string & name`)
Constructor.
- void **update** ()
Update contents of the matrix from the AC space.
- `const std::string &` **getname** () `const`
Return name of AC variable/matrix.
- `const std::string &` **getusername** () `const`
Return user specified name of AC variable/matrix.
- void **insert** (`algo_comm_t & ac`)
Insert matrix into an AC space (other than source AC space)

Additional Inherited Members

5.188.1 Detailed Description

Copy AC variable to a matrix.

This class constructs a matrix of same size as an AC variable and can copy the AC variable to itself. The **update()** (p. 760) function is real-time safe.

5.188.2 Constructor & Destructor Documentation

5.188.2.1 ac2matrix_t() `MHA_AC::ac2matrix_t::ac2matrix_t (`
 `algo_comm_t & ac,`
 `const std::string & name)`

Constructor.

Parameters

<i>ac</i>	AC handle
<i>name</i>	Name of AC variable to be copied

5.188.3 Member Function Documentation

5.188.3.1 update() `void MHA_AC::ac2matrix_t::update ()`

Update contents of the matrix from the AC space.

This function is real-time safe. The copy operation performance is of the order of the number of elements in the matrix.

5.188.3.2 getname() `const std::string& MHA_AC::ac2matrix_t::getname () const [inline]`

Return name of AC variable/matrix.

5.188.3.3 getusername() `const std::string& MHA_AC::ac2matrix_t::getusername ()`
`const [inline]`

Return user specified name of AC variable/matrix.

5.188.3.4 insert() `void MHA_AC::ac2matrix_t::insert (`
`algo_comm_t & ac)`

Insert matrix into an AC space (other than source AC space)

Parameters

<i>ac</i>	AC space handle to insert data
-----------	--------------------------------

Note

The AC variable data buffer points to the data of the matrix. Modifications of the AC variable directly modify the data of the matrix; after deletion of the matrix, the data buffer is invalid.

The documentation for this class was generated from the following files:

- **mha_algo_comm.hh**
- **mha_algo_comm.cpp**

5.189 MHA_AC::acspace2matrix_t Class Reference

Copy all or a subset of all numeric AC variables into an array of matrixes.

Public Member Functions

- **acspace2matrix_t (algo_comm_t &ac, const std::vector< std::string > &names)**
Constructor.
- **acspace2matrix_t (const MHA_AC::acspace2matrix_t &src)**
Constructor with initialization from an instance.
- **~acspace2matrix_t ()**
- **MHA_AC::acspace2matrix_t & operator= (const MHA_AC::acspace2matrix_t &src)**
Copy all contents (deep copy).
- **MHA_AC::ac2matrix_t & operator[] (unsigned int k)**

- Access operator.*
- const **MHA_AC::ac2matrix_t** & **operator[]** (unsigned int k) const
Constant access operator.
 - void **update** ()
Update function.
 - unsigned int **size** () const
Number of matrixes in AC space.
 - unsigned int **frame** () const
Actual frame number.
 - void **insert** (**algo_comm_t** &ac)
Insert AC space copy into an AC space (other than source AC space)

Private Attributes

- unsigned int **len**
- **MHA_AC::ac2matrix_t** ** **data**
- unsigned int **frameno**

5.189.1 Detailed Description

Copy all or a subset of all numeric AC variables into an array of matrixes.

5.189.2 Constructor & Destructor Documentation

5.189.2.1 acspace2matrix_t() [1/2] MHA_AC::acspace2matrix_t::acspace2matrix_t (**algo_comm_t** & ac, const std::vector< std::string > & names)

Constructor.

Scan all given AC variables and allocate corresponding matrixes.

Parameters

<i>ac</i>	AC handle.
<i>names</i>	Names of AC variables, or empty for all.

5.189.2.2 acspace2matrix_t() [2/2] `MHA_AC::acspace2matrix_t::acspace2matrix_t (const MHA_AC::acspace2matrix_t & src)`

Constructor with initialization from an instance.

Parameters

<code>src</code>	Instance to be copied.
------------------	------------------------

5.189.2.3 ~acspace2matrix_t() `MHA_AC::acspace2matrix_t::~~acspace2matrix_t ()`

5.189.3 Member Function Documentation

5.189.3.1 operator=() `MHA_AC::acspace2matrix_t & MHA_AC::acspace2matrix_t::operator= (const MHA_AC::acspace2matrix_t & src)`

Copy all contents (deep copy).

Parameters

<code>src</code>	Array of matrixes to be copied.
------------------	---------------------------------

5.189.3.2 operator[]() [1/2] `MHA_AC::ac2matrix_t& MHA_AC::acspace2matrix_t::operator[] (unsigned int k) [inline]`

Access operator.

Parameters

<code>k</code>	index into array; should not exceed <code>size()</code> (p. 764)-1.
----------------	---

Return values

<i>Reference</i>	to matrix.
------------------	------------

5.189.3.3 operator[]() [2/2] `const MHA_AC::ac2matrix_t& MHA_AC::acspace2matrix_t↔
::operator[] (`
`unsigned int k) const [inline]`

Constant access operator.

Parameters

<i>k</i>	index into array; should not exceed size() (p. 764)-1.
----------	---

Return values

<i>Constant</i>	reference to matrix.
-----------------	----------------------

5.189.3.4 update() `void MHA_AC::acspace2matrix_t::update () [inline]`

Update function.

This function updates all matrixes from their corresponding AC variables. It can be called from the MHA Framework prepare function or in the processing callback.

5.189.3.5 size() `unsigned int MHA_AC::acspace2matrix_t::size () const [inline]`

Number of matrixes in AC space.

5.189.3.6 frame() `unsigned int MHA_AC::acspace2matrix_t::frame () const [inline]`

Actual frame number.

5.189.3.7 insert() `void MHA_AC::acspace2matrix_t::insert (`
`algo_comm_t & ac)`

Insert AC space copy into an AC space (other than source AC space)

Parameters

<i>ac</i>	AC space handle to insert data
-----------	--------------------------------

5.189.4 Member Data Documentation

5.189.4.1 len unsigned int MHA_AC::acspace2matrix_t::len [private]

5.189.4.2 data MHA_AC::ac2matrix_t** MHA_AC::acspace2matrix_t::data [private]

5.189.4.3 frameno unsigned int MHA_AC::acspace2matrix_t::frameno [private]

The documentation for this class was generated from the following files:

- mha_algo_comm.hh
- mha_algo_comm.cpp

5.190 MHA_AC::algo_comm_class_t Class Reference

AC variable space implementation.

Inheritance diagram for MHA_AC::algo_comm_class_t:

Public Member Functions

- void **insert_var** (const std::string &name, **comm_var_t** cv) override

- virtual void **set_prepared** (bool prepared)

The provider of this AC space must set the AC space to prepared at the end of its own prepare() operation and to not prepared at the beginning of its own release() operation.

Private Attributes

- **comm_var_map_t** vars
Storage.

5.190.1 Detailed Description

AC variable space implementation.

5.190.2 Member Function Documentation

5.190.2.1 insert_var() void MHA_AC::algo_comm_class_t::insert_var (const std::string & name, **comm_var_t** cv) [override], [virtual]

Implements **MHA_AC::algo_comm_t** (p. 771).

5.190.2.2 insert_var_int() void MHA_AC::algo_comm_class_t::insert_var_int (
const std::string & name,
int * ptr) [override], [virtual]

Implements **MHA_AC::algo_comm_t** (p. 771).

5.190.2.3 insert_var_vfloat() void MHA_AC::algo_comm_class_t::insert_var_vfloat (
const std::string & name,
std::vector< float > & vec) [override], [virtual]

Implements **MHA_AC::algo_comm_t** (p. 772).

5.190.2.4 insert_var_float() void MHA_AC::algo_comm_class_t::insert_var_float (
const std::string & name,
float * ptr) [override], [virtual]

Implements **MHA_AC::algo_comm_t** (p. 773).

5.190.2.5 insert_var_double() void MHA_AC::algo_comm_class_t::insert_var_double (
const std::string & name,
double * ptr) [override], [virtual]

Implements **MHA_AC::algo_comm_t** (p. 773).

5.190.2.6 remove_var() void MHA_AC::algo_comm_class_t::remove_var (
const std::string & name) [override], [virtual]

Implements **MHA_AC::algo_comm_t** (p. 774).

5.190.2.7 remove_ref() void MHA_AC::algo_comm_class_t::remove_ref (
void * addr) [override], [virtual]

Implements **MHA_AC::algo_comm_t** (p. 774).

5.190.2.8 is_var() `bool MHA_AC::algo_comm_class_t::is_var (`
`const std::string & name) const [override], [virtual]`

Implements **MHA_AC::algo_comm_t** (p. 775).

5.190.2.9 get_var() `MHA_AC::comm_var_t MHA_AC::algo_comm_class_t::get_var (`
`const std::string & name) const [override], [virtual]`

Implements **MHA_AC::algo_comm_t** (p. 775).

5.190.2.10 get_var_int() `int MHA_AC::algo_comm_class_t::get_var_int (`
`const std::string & name) const [override], [virtual]`

Implements **MHA_AC::algo_comm_t** (p. 776).

5.190.2.11 get_var_float() `float MHA_AC::algo_comm_class_t::get_var_float (`
`const std::string & name) const [override], [virtual]`

Implements **MHA_AC::algo_comm_t** (p. 776).

5.190.2.12 get_var_double() `double MHA_AC::algo_comm_class_t::get_var_double (`
`const std::string & name) const [override], [virtual]`

Implements **MHA_AC::algo_comm_t** (p. 777).

5.190.2.13 get_entries() `const std::vector< std::string > & MHA_AC::algo_comm_↔`
`class_t::get_entries () const [override], [virtual]`

Implements **MHA_AC::algo_comm_t** (p. 777).

5.190.2.14 size() `size_t MHA_AC::algo_comm_class_t::size () const [override], [virtual]`

Implements **MHA_AC::algo_comm_t** (p. 778).

5.190.2.15 set_prepared() `void MHA_AC::algo_comm_class_t::set_prepared (bool prepared) [virtual]`

The provider of this AC space must set the AC space to prepared at the end of its own prepare() operation and to not prepared at the beginning of its own release() operation.

5.190.3 Member Data Documentation

5.190.3.1 vars `comm_var_map_t MHA_AC::algo_comm_class_t::vars [private]`

Storage.

The documentation for this class was generated from the following files:

- `mha_algo_comm.hh`
- `mha_algo_comm.cpp`

5.191 MHA_AC::algo_comm_t Class Reference

Algorithm communication variable space interface.

Inheritance diagram for `MHA_AC::algo_comm_t`:

Public Member Functions

- virtual `~algo_comm_t ()=default`
- virtual void `insert_var (const std::string &name, comm_var_t cv)=0`
Interacts with AC space storage to create or replace an AC variable.
- virtual void `insert_var_int (const std::string &name, int *ptr)=0`
Convenience method for inserting or replacing a scalar integer AC variable into AC space.
- virtual void `insert_var_vfloat (const std::string &name, std::vector< float > &vec)=0`
Convenience function for inserting or replacing a vector of floats as an AC variable into the AC space.
- virtual void `insert_var_float (const std::string &name, float *ptr)=0`
Convenience method for inserting or replacing a scalar float AC variable into AC space.
- virtual void `insert_var_double (const std::string &name, double *ptr)=0`
Convenience method for inserting or replacing a scalar double AC variable into AC space.
- virtual void `remove_var (const std::string &name)=0`
Remove an AC variable from AC space by name.
- virtual void `remove_ref (void *addr)=0`
Remove all AC variables from AC space that point to the given memory address.
- virtual bool `is_var (const std::string &name) const =0`
Interacts with AC space storage to check if an AC variable with the given name exists.
- virtual `comm_var_t get_var (const std::string &name) const =0`
Interacts with AC space storage to retrieve the metadata for an AC variable with the given name.
- virtual int `get_var_int (const std::string &name) const =0`
Convenience method for retrieving a scalar integer AC variable from AC space.
- virtual float `get_var_float (const std::string &name) const =0`
Convenience method for retrieving a scalar float AC variable from AC space.
- virtual double `get_var_double (const std::string &name) const =0`
Convenience method for retrieving a scalar double AC variable from AC space.
- virtual const std::vector< std::string > & `get_entries () const =0`
- virtual size_t `size () const =0`
Interacts with AC space storage to return the number of AC variables currently stored in the AC space.

5.191.1 Detailed Description

Algorithm communication variable space interface.

5.191.2 Constructor & Destructor Documentation

5.191.2.1 `~algo_comm_t()` `virtual MHA_AC::algo_comm_t::~~algo_comm_t () [virtual], [default]`

5.191.3 Member Function Documentation

5.191.3.1 `insert_var()` `virtual void MHA_AC::algo_comm_t::insert_var (const std::string & name, comm_var_t cv) [pure virtual]`

Interacts with AC space storage to create or replace an AC variable.

When the AC space is already prepared, only replacing existing variables is permitted, not creating new ones. An AC space becomes prepared only after the plugin's `prepare()` method has finished executing, and becomes unprepared again before the plugin's `release()` method starts executing. During signal processing, which starts after all plugins have executed their `prepare()` methods and terminates before any plugin executes its `release()` method, the AC space stays in prepared state.

Plugins calling this method must ensure that it is called directly or indirectly from every single invocation of their `prepare()` and their `process()` methods for each AC variable that they choose to publish. During `prepare()`, plugins must decide which AC variables to publish and stick to this decision until the next invocation of `release()`.

Parameters

<i>name</i>	Name of the AC variable to create or to replace. May not be empty. Must not contain space character.
<i>cv</i>	Descriptor of AC variable. The <code>data</code> pointer of this struct must remain valid until at least the next invocation of the calling plugin's <code>process()</code> or <code>release()</code> method, the other fields must correctly describe the data.

Exceptions

<i>MHA_Error</i> (p. 818)	If the AC space is already prepared and no AC variable with name <code>name</code> exists yet.
<i>MHA_Error</i> (p. 818)	if name is empty or contains space.

Implemented in `MHA_AC::algo_comm_class_t` (p. 766).

5.191.3.2 insert_var_int() `virtual void MHA_AC::algo_comm_t::insert_var_int (`
`const std::string & name,`
`int * ptr) [pure virtual]`

Convenience method for inserting or replacing a scalar integer AC variable into AC space.

Creates suitable **comm_var_t** (p. 782) and forwards to **insert_var()** (p. 771), therefore see also the documentation of **insert_var()** (p. 771). When the AC space is already prepared, only replacing existing variables is permitted, not creating new ones.

Parameters

<i>name</i>	Name of the AC variable to create or to replace. May not be empty. Must not contain space character.
<i>ptr</i>	Pointer to an int variable owned by the calling plugin. The pointer must remain valid until at least the next invocation of the calling plugin's process() or release() method.

Exceptions

MHA_Error (p. 818)	If the AC space is already prepared and no AC variable with name name exists yet.
MHA_Error (p. 818)	if name is empty or contains space.

Implemented in **MHA_AC::algo_comm_class_t** (p. 766).

5.191.3.3 insert_var_vfloat() `virtual void MHA_AC::algo_comm_t::insert_var_vfloat (`
`const std::string & name,`
`std::vector< float > & vec) [pure virtual]`

Convenience function for inserting or replacing a vector of floats as an AC variable into the AC space.

Creates suitable **comm_var_t** (p. 782) and forwards to **insert_var()** (p. 771), therefore see also the documentation of **insert_var()** (p. 771). When the AC space is prepared, only replacing existing variables is permitted, not creating new ones.

Parameters

<i>name</i>	Name of the AC variable to create or to replace. May not be empty. Must not contain space character.
<i>vec</i>	Reference to a float vector owned by the calling plugin. The internal storage of this vector must remain valid until at least the next invocation of the calling plugin's process() or release() method. No methods that could cause iterator invalidation may be called on this vector until at least then.

Exceptions

MHA_Error (p. 818)	If the AC space is already prepared and no AC variable with name <code>name</code> exists yet.
MHA_Error (p. 818)	if name is empty or contains space.
MHA_Error (p. 818)	if vec contains more elements than can be represented by comm_var_t::num_entries (p. 783).

Implemented in **MHA_AC::algo_comm_class_t** (p. 767).

5.191.3.4 insert_var_float() `virtual void MHA_AC::algo_comm_t::insert_var_float (const std::string & name, float * ptr) [pure virtual]`

Convenience method for inserting or replacing a scalar float AC variable into AC space.

Creates suitable **comm_var_t** (p. 782) and forwards to **insert_var()** (p. 771), therefore see also the documentation of **insert_var()** (p. 771). When the AC space is prepared, only replacing existing variables is permitted, not creating new ones.

Parameters

<i>name</i>	Name of the AC variable to create or to replace. May not be empty. Must not contain space character.
<i>ptr</i>	Pointer to a float variable owned by the calling plugin. The pointer must remain valid until at least the next invocation of the calling plugin's <code>process()</code> or <code>release()</code> method.

Exceptions

MHA_Error (p. 818)	If the AC space is already prepared and no AC variable with name <code>name</code> exists yet.
MHA_Error (p. 818)	if name is empty or contains space.

Implemented in **MHA_AC::algo_comm_class_t** (p. 767).

5.191.3.5 insert_var_double() `virtual void MHA_AC::algo_comm_t::insert_var_double (const std::string & name, double * ptr) [pure virtual]`

Convenience method for inserting or replacing a scalar double AC variable into AC space.

Creates suitable `comm_var_t` (p. 782) and forwards to `insert_var()` (p. 771), therefore see also the documentation of `insert_var()` (p. 771). When the AC space is prepared, only replacing existing variables is permitted, not creating new ones.

Parameters

<i>name</i>	Name of the AC variable to create or to replace. May not be empty. Must not contain space character.
<i>ptr</i>	Pointer to a double variable owned by the calling plugin. The pointer must remain valid until at least the next invocation of the calling plugin's <code>process()</code> or <code>release()</code> method.

Exceptions

<i>MHA_Error</i> (p. 818)	If the AC space is already prepared and no AC variable with name <code>name</code> exists yet.
<i>MHA_Error</i> (p. 818)	if name is empty or contains space.

Implemented in `MHA_AC::algo_comm_class_t` (p. 767).

```
5.191.3.6 remove_var() virtual void MHA_AC::algo_comm_t::remove_var (
    const std::string & name ) [pure virtual]
```

Remove an AC variable from AC space by name.

Only permitted when AC space is not prepared. Trying to remove a non-existing AC variable from AC space is not by itself an error. Calling this method while the AC space is prepared is an error, because it is not permitted to remove AC variables during signal processing, only to update them.

Parameters

<i>name</i>	Name of the AC variable to remove.
-------------	------------------------------------

Exceptions

<i>MHA_Error</i> (p. 818)	if called while prepared, and then regardless of whether an AC variable with name <code>name</code> exists or not.
----------------------------------	--

Implemented in `MHA_AC::algo_comm_class_t` (p. 767).

5.191.3.7 remove_ref() `virtual void MHA_AC::algo_comm_t::remove_ref (void * addr) [pure virtual]`

Remove all AC variables from AC space that point to the given memory address.

Only permitted when AC space is not prepared. While not prepared, it is not an error if no AC variables or if multiple AC variables actually point to *addr*. All matching variables are removed.

Parameters

<i>addr</i>	Memory address where the data of the AC variable(s) to remove is or was stored.
-------------	---

Exceptions

<i>MHA_Error</i> (p. 818)	if called while prepared, regardless whether any AC variables currently point to <i>addr</i> or not.
----------------------------------	--

Implemented in **MHA_AC::algo_comm_class_t** (p. 767).

5.191.3.8 is_var() `virtual bool MHA_AC::algo_comm_t::is_var (const std::string & name) const [pure virtual]`

Interacts with AC space storage to check if an AC variable with the given name exists.

Parameters

<i>name</i>	Name of the AC variable to check.
-------------	-----------------------------------

Implemented in **MHA_AC::algo_comm_class_t** (p. 767).

5.191.3.9 get_var() `virtual comm_var_t MHA_AC::algo_comm_t::get_var (const std::string & name) const [pure virtual]`

Interacts with AC space storage to retrieve the metadata for an AC variable with the given name.

Parameters

<i>name</i>	Name of the AC variable to retrieve.
-------------	--------------------------------------

Returns

a struct describing the AC variable's data type, memory location and size.

Exceptions

<i>MHA_Error</i> (p. 818)	if no AC variable with the given name exists.
----------------------------------	---

Implemented in **MHA_AC::algo_comm_class_t** (p. 768).

5.191.3.10 get_var_int() `virtual int MHA_AC::algo_comm_t::get_var_int (const std::string & name) const [pure virtual]`

Convenience method for retrieving a scalar integer AC variable from AC space.

Checks data type and size.

Parameters

<i>name</i>	Name of the AC variable to read.
-------------	----------------------------------

Returns

Value of the AC variable.

Exceptions

<i>MHA_Error</i> (p. 818)	if no AC variable with the given name exists.
<i>MHA_Error</i> (p. 818)	if AC variable <i>name</i> is not an integer or not a scalar.

Implemented in **MHA_AC::algo_comm_class_t** (p. 768).

5.191.3.11 get_var_float() `virtual float MHA_AC::algo_comm_t::get_var_float (const std::string & name) const [pure virtual]`

Convenience method for retrieving a scalar float AC variable from AC space.

Checks data type and size.

Parameters

<i>name</i>	Name of the AC variable to read.
-------------	----------------------------------

Returns

Value of the AC variable.

Exceptions

<i>MHA_Error</i> (p. 818)	if no AC variable with the given name exists.
<i>MHA_Error</i> (p. 818)	if AC variable <i>name</i> is not a float or not a scalar.

Implemented in **MHA_AC::algo_comm_class_t** (p. 768).

5.191.3.12 get_var_double() `virtual double MHA_AC::algo_comm_t::get_var_double (const std::string & name) const [pure virtual]`

Convenience method for retrieving a scalar double AC variable from AC space.

Checks data type and size.

Parameters

<i>name</i>	Name of the AC variable to read.
-------------	----------------------------------

Returns

Value of the AC variable.

Exceptions

<i>MHA_Error</i> (p. 818)	if no AC variable with the given name exists.
<i>MHA_Error</i> (p. 818)	if AC variable <i>name</i> is not a double or not a scalar.

Implemented in **MHA_AC::algo_comm_class_t** (p. 768).

5.191.3.13 get_entries() `virtual const std::vector<std::string>& MHA_AC::algo_↔
comm_t::get_entries () const [pure virtual]`

Returns

a list of the names of all existing AC variables.

Implemented in **MHA_AC::algo_comm_class_t** (p. 768).

5.191.3.14 size() `virtual size_t MHA_AC::algo_comm_t::size () const [pure virtual]`

Interacts with AC space storage to return the number of AC variables currently stored in the AC space.

Always permitted.

Implemented in **MHA_AC::algo_comm_class_t** (p. 768).

The documentation for this class was generated from the following file:

- **mha_algo_comm.hh**

5.192 MHA_AC::comm_var_map_t Class Reference

Storage class for the AC variable space.

Public Member Functions

- **bool has_key** (const std::string &name) const
Query the map if some AC variable name is present in the AC space.
- **void insert** (const std::string &name, const **comm_var_t** &var)
Create or replace variable.
- **void erase_by_name** (const std::string &name)
Remove variable.
- **void erase_by_pointer** (void *ptr)
Find variables that point to the given address.
- **const comm_var_t & retrieve** (const std::string &name) const
*Get the **comm_var_t** (p. 782) of an existing variable.*
- **const std::vector< std::string > & get_entries** () const
- **size_t size** () const

Public Attributes

- bool **is_prepared** = {false}

is_prepared stores whether the provider of the AC space has entered MHA state "prepared" or not.

Private Member Functions

- void **update_entries** ()

Update the member variable **entries** (p. 782) because an AC variable has been inserted or removed.

Private Attributes

- std::map< std::string, **comm_var_t** > **map**
The std::map used for organizing the AC space.
- std::vector< std::string > **entries**
A list containing the names of all AC variables.

5.192.1 Detailed Description

Storage class for the AC variable space.

Uses an std::map for associating AC variable names with AC variable metadata (**comm_var_t** (p. 782)). Acts as a delegator for the std::map storage. Allows operations that may require memory allocations/deallocations only when `is_prepared == false`.

5.192.2 Member Function Documentation

5.192.2.1 **update_entries()** void MHA_AC::comm_var_map_t::update_entries () [private]

Update the member variable **entries** (p. 782) because an AC variable has been inserted or removed.

Only permitted if `is_prepared == false`.

5.192.2.2 **has_key()** bool MHA_AC::comm_var_map_t::has_key (const std::string & name) const [inline]

Query the map if some AC variable name is present in the AC space.

Parameters

<i>name</i>	Name of AC variable to check.
-------------	-------------------------------

Returns

true if the variable is present in the AC space.
false if no variable with this name exists in the AC space.

5.192.2.3 insert() `void MHA_AC::comm_var_map_t::insert (`
`const std::string & name,`
`const comm_var_t & var)`

Create or replace variable.

Creating is only permitted if `is_prepared == false`.

Parameters

<i>name</i>	Name of the AC variable to create or update. May not be empty. Must not contain space character.
<i>var</i>	Metadata of the AC variable.

Exceptions

<i>MHA_Error</i> (p. 818)	if asked to create in prepared state.
<i>MHA_Error</i> (p. 818)	if name is empty or contains space.

5.192.2.4 erase_by_name() `void MHA_AC::comm_var_map_t::erase_by_name (`
`const std::string & name)`

Remove variable.

Only permitted if `is_prepared == false`.

Parameters

<i>name</i>	Name of the AC variable to remove.
-------------	------------------------------------

Exceptions

MHA_Error (p. 818)	if called while prepared.
---------------------------	---------------------------

5.192.2.5 erase_by_pointer() `void MHA_AC::comm_var_map_t::erase_by_pointer (void * ptr)`

Find variables that point to the given address.

Erase all that are found. It is not an error if no variable points there. Only permitted if `is_prepared == false`. `@ptr` Pointer to memory where the variables data is stored.

Exceptions

MHA_Error (p. 818)	if called while prepared.
---------------------------	---------------------------

5.192.2.6 retrieve() `const MHA_AC::comm_var_t & MHA_AC::comm_var_map_t::retrieve (const std::string & name) const`

Get the `comm_var_t` (p. 782) of an existing variable.

Parameters

<i>name</i>	The name of the AC variable.
-------------	------------------------------

Exceptions

MHA_Error (p. 818)	if no such variable exists in the AC space.
---------------------------	---

5.192.2.7 get_entries() `const std::vector< std::string > & MHA_AC::comm_var_map_t::get_entries () const`

Returns

A list of names of all AC variables in this AC space.

5.192.2.8 size() `size_t MHA_AC::comm_var_map_t::size () const [inline]`

Returns

number of stored AC variables

5.192.3 Member Data Documentation

5.192.3.1 map `std::map<std::string, comm_var_t> MHA_AC::comm_var_map_t::map [private]`

The `std::map` used for organizing the AC space.

5.192.3.2 entries `std::vector<std::string> MHA_AC::comm_var_map_t::entries [private]`

A list containing the names of all AC variables.

5.192.3.3 is_prepared `bool MHA_AC::comm_var_map_t::is_prepared = {false}`

`is_prepared` stores whether the provider of the AC space has entered MHA state "prepared" or not.

Operations on `map` that require memory allocations or deallocations are only allowed when not prepared. Needs to be set by the containing `algo_comm_class_t` (p. 765) AC space instance.

The documentation for this class was generated from the following files:

- `mha_algo_comm.hh`
- `mha_algo_comm.cpp`

5.193 MHA_AC::comm_var_t Struct Reference

Algorithm communication variable structure.

Public Attributes

- unsigned int **data_type**
Type of data.
- unsigned int **num_entries**
*The number of elements of data type **data_type** (p. 783) stored at the pointer address **data** (p. 784).*
- unsigned int **stride**
This data member can be used to describe the extent of one dimension if the data should be interpreted as a two-dimensional matrix.
- void * **data**
data is a pointer to where the AC variable's data is stored in memory.

5.193.1 Detailed Description

Algorithm communication variable structure.

Algorithm communication variables (AC variables) are described by objects of this type. AC variables can be published to the algorithm variable space with the **algo_comm_class_t**↔**::insert_var** (p. 766) method so that other plugins can read and modify their values.

5.193.2 Member Data Documentation

5.193.2.1 **data_type** unsigned int MHA_AC::comm_var_t::data_type

Type of data.

`data_type` can be one of the predefined types or any user defined type. The pre-defined types are:

- **MHA_AC_CHAR** (p. 1657)
- **MHA_AC_INT** (p. 1657)
- **MHA_AC_MHAREAL** (p. 1657)
- **MHA_AC_FLOAT** (p. 1657)
- **MHA_AC_DOUBLE** (p. 1657)
- **MHA_AC_MHACOMPLEX** (p. 1657)
- or any user defined type with a value \geq **MHA_AC_USER** (p. 1657)

5.193.2.2 **num_entries** `unsigned int MHA_AC::comm_var_t::num_entries`

The number of elements of data type **data_type** (p. 783) stored at the pointer address **data** (p. 784).

5.193.2.3 **stride** `unsigned int MHA_AC::comm_var_t::stride`

This data member can be used to describe the extent of one dimension if the data should be interpreted as a two-dimensional matrix.

The extent in the other dimension then is **num_entries** (p. 783) / **stride** (p. 784). When downstream plugins could interpret the AC variable as a (possibly 1x1) matrix, then it should be avoided to set **stride** (p. 784) to 0.

5.193.2.4 **data** `void* MHA_AC::comm_var_t::data`

`data` is a pointer to where the AC variable's `data` is stored in memory.

This pointer has to be valid for the lifetime of this AC variable.

The documentation for this struct was generated from the following file:

- **mha.hh**

5.194 **MHA_AC::scalar_t< numeric_t, MHA_AC_TYPECODE > Class Template Reference**

Public Member Functions

- **scalar_t** (**algo_comm_t** & **ac**, const std::string & **name**, numeric_t val=0, bool insert←_now=true)

Initialize memory and metadata of the AC variable.
- **~scalar_t** ()

Destroy the AC variable: deallocate its memory.
- void **insert** ()

Insert or re-insert AC variable into AC space.
- void **remove** ()

Remove the AC variable by reference from the AC variable space.

Public Attributes

- **numeric_t data**
Numeric value of this AC variable.

Private Attributes

- **algo_comm_t & ac**
AC variable space.
- **const std::string name**
Name of this AC variable in the AC variable space.
- **const bool remove_during_destructor**
flag whether to remove from AC variable space in destructor.

5.194.1 Detailed Description

```
template<typename numeric_t, unsigned int MHA_AC_TYPECODE>
class MHA_AC::scalar_t< numeric_t, MHA_AC_TYPECODE >
```

Template for convenience classes for inserting a numeric scalar into the AC space.

5.194.2 Constructor & Destructor Documentation

```
5.194.2.1 scalar_t() template<typename numeric_t , unsigned int MHA_AC_TYPECODE>
MHA_AC::scalar_t< numeric_t, MHA_AC_TYPECODE >:: scalar_t (
    algo_comm_t & ac,
    const std::string & name,
    numeric_t val = 0,
    bool insert_now = true ) [inline]
```

Initialize memory and metadata of the AC variable.

Parameters

<i>ac</i>	AC handle
<i>name</i>	Name of variable in AC space
<i>val</i>	Initial value
<i>insert_now</i>	If true, then the constructor inserts the new variable into the AC space, and the destructor will remove the variable from AC space when it executes.

5.194.2.2 `~scalar_t()` `template<typename numeric_t , unsigned int MHA_AC_TYPECODE>`
`MHA_AC::scalar_t< numeric_t, MHA_AC_TYPECODE >::~~ scalar_t () [inline]`

Destroy the AC variable: deallocate its memory.

If the constructor parameter `insert_now` was true, then the destructor removes the AC variable from AC space when it executes.

5.194.3 Member Function Documentation

5.194.3.1 `insert()` `template<typename numeric_t , unsigned int MHA_AC_TYPECODE>`
`void MHA_AC::scalar_t< numeric_t, MHA_AC_TYPECODE >::insert () [inline]`

Insert or re-insert AC variable into AC space.

Plugins should call this method from their `prepare()` and `process()` functions.

5.194.3.2 `remove()` `template<typename numeric_t , unsigned int MHA_AC_TYPECODE>`
`void MHA_AC::scalar_t< numeric_t, MHA_AC_TYPECODE >::remove () [inline]`

Remove the AC variable by reference from the AC variable space.

Plugins may call this method only from their `prepare()`, `release()` methods or their plugin destructor. It is not necessary to remove the AC variable from AC space at all if either another AC variable with the same name has replaced this variable before this variable is destroyed, or if no plugin will access this variable between its destruction and either its replacement or the MHA exit.

5.194.4 Member Data Documentation

5.194.4.1 `data` `template<typename numeric_t , unsigned int MHA_AC_TYPECODE>`
`numeric_t MHA_AC::scalar_t< numeric_t, MHA_AC_TYPECODE >::data`

Numeric value of this AC variable.

5.194.4.2 ac `template<typename numeric_t , unsigned int MHA_AC_TYPECODE>
 algo_comm_t& MHA_AC::scalar_t< numeric_t, MHA_AC_TYPECODE >::ac [private]`

AC variable space.

5.194.4.3 name `template<typename numeric_t , unsigned int MHA_AC_TYPECODE>
 const std::string MHA_AC::scalar_t< numeric_t, MHA_AC_TYPECODE >::name [private]`

Name of this AC variable in the AC variable space.

5.194.4.4 remove_during_destructor `template<typename numeric_t , unsigned int MHA_AC_TYPECODE>
 const bool MHA_AC::scalar_t< numeric_t, MHA_AC_TYPECODE >::remove_during_destructor [private]`

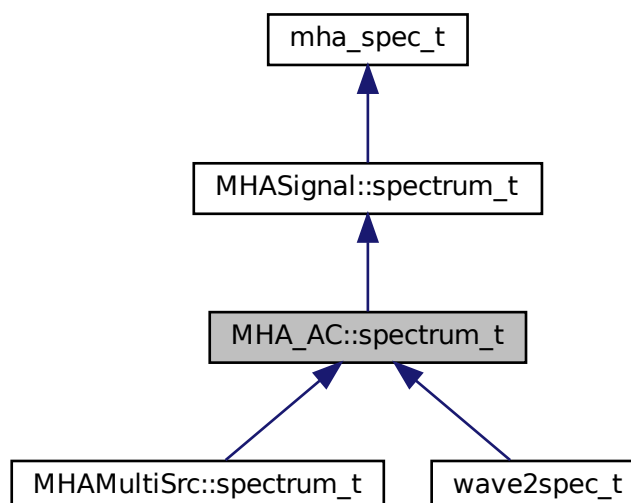

flag whether to remove from AC variable space in destructor.

The documentation for this class was generated from the following file:

- `mha_algo_comm.hh`

5.195 MHA_AC::spectrum_t Class Reference

Inheritance diagram for MHA_AC::spectrum_t:

Public Member Functions

- **spectrum_t** (**algo_comm_t** & **ac**, const std::string & **name**, unsigned int **bins**, unsigned int **channels**, bool **insert_now**)
Initialize memory and metadata of the AC variable.
- **~spectrum_t** ()
Destroy the AC variable: deallocate its memory.
- void **insert** ()
Insert or re-insert AC variable into AC space.
- void **remove** ()
Remove the AC variable by reference from the AC variable space.

Protected Attributes

- **algo_comm_t** & **ac**
AC variable space.
- const std::string **name**
Name of this AC variable in the AC variable space.
- const bool **remove_during_destructor**
flag whether to remove from AC variable space in destructor.

Additional Inherited Members

5.195.1 Detailed Description

Convenience class for inserting a spectrum into the AC space.

In MHA, spectra are stored non-interleaved: First all bins of the first channel are stored, then all bins of the second channel, etc.

The stride of the AC variable is set to the number of stored bins, which is equal to $\text{floor}(\text{fftlen}/2)+1$ in MHA (negative frequency bins are not stored).

5.195.2 Constructor & Destructor Documentation

5.195.2.1 spectrum_t() `MHA_AC::spectrum_t::spectrum_t (`
`algo_comm_t & ac,`
`const std::string & name,`
`unsigned int bins,`
`unsigned int channels,`
`bool insert_now)`

Initialize memory and metadata of the AC variable.

All spectral bins are initially set to 0.

Parameters

<i>ac</i>	AC handle
<i>name</i>	Name of variable in AC space
<i>bins</i>	Number of FFT bins per channel in the spectrum_t (p. 787) class
<i>channels</i>	Number of audio channels in the spectrum_t (p. 787) class
<i>insert_now</i>	If true, then the constructor inserts the new variable into the AC space, and the destructor will remove the variable from AC space when it executes.

5.195.2.2 `~spectrum_t()` `MHA_AC::spectrum_t::~~spectrum_t () [virtual]`

Destroy the AC variable: deallocate its memory.

If the constructor parameter `insert_now` was true, then the destructor removes the AC variable from AC space when it executes.

Reimplemented from **MHASignal::spectrum_t** (p. 1297).

5.195.3 Member Function Documentation

5.195.3.1 `insert()` `void MHA_AC::spectrum_t::insert ()`

Insert or re-insert AC variable into AC space.

Plugins should call this method from their `prepare()` and `process()` functions.

5.195.3.2 `remove()` `void MHA_AC::spectrum_t::remove ()`

Remove the AC variable by reference from the AC variable space.

Plugins may call this method only from their `prepare()`, `release()` methods or their plugin destructor. It is not necessary to remove the AC variable from AC space at all if either another AC variable with the same name has replaced this variable before this variable is destroyed, or if no plugin will access this variable between its destruction and either its replacement or the MHA exit.

5.195.4 Member Data Documentation

5.195.4.1 ac `algo_comm_t& MHA_AC::spectrum_t::ac` [protected]

AC variable space.

5.195.4.2 name `const std::string MHA_AC::spectrum_t::name` [protected]

Name of this AC variable in the AC variable space.

5.195.4.3 remove_during_destructor `const bool MHA_AC::spectrum_t::remove_during←
_destructor` [protected]

flag whether to remove from AC variable space in destructor.

Inheritance diagram for `MHA_AC::waveform_t`:

Public Member Functions

- **waveform_t** (`algo_comm_t & ac`, `const std::string & name`, `unsigned int frames`, `unsigned int channels`, `bool insert_now`)
Initialize memory and metadata of the AC variable.
- **~waveform_t** ()
Destroy the AC variable: deallocate its memory.
- **insert** ()
Insert or re-insert AC variable into AC space.
- **remove** ()
Remove the AC variable by reference from the AC variable space.

Protected Attributes

- **algo_comm_t & ac**
AC variable space.
- const std::string **name**
Name of this AC variable in the AC variable space.
- const bool **remove_during_destructor**
flag whether to remove from AC variable space in destructor.

Additional Inherited Members

5.197.1 Detailed Description

Convenience class for inserting a waveform (a block of time-domain audio signal) into the AC space.

In MHA, waveforms are stored interleaved: The first sample of the first is followed by the first samples of all other channels before the second sample of the first sample is stored, etc.

The stride of the AC variable is set to the number of audio channels.

5.197.2 Constructor & Destructor Documentation

5.197.2.1 waveform_t() MHA_AC::waveform_t::waveform_t (
 algo_comm_t & ac,
 const std::string & *name*,
 unsigned int *frames*,
 unsigned int *channels*,
 bool *insert_now*)

Initialize memory and metadata of the AC variable.

All audio samples are initially set to 0.

Parameters

<i>ac</i>	AC handle
<i>name</i>	Name of variable in AC space
<i>frames</i>	Number of samples per channel in the waveform_t (p. 792) class
<i>channels</i>	Number of audio channels in the waveform_t (p. 792) class
<i>insert_now</i>	If true, then the constructor inserts the new variable into the AC space, and the destructor will remove the variable from AC space when it executes.

5.197.2.2 `~waveform_t()` `MHA_AC::waveform_t::~~waveform_t () [virtual]`

Destroy the AC variable: deallocate its memory.

If the constructor parameter `insert_now` was true, then the destructor removes the AC variable from AC space when it executes.

Reimplemented from **MHASignal::waveform_t** (p. 1313).

5.197.3 Member Function Documentation

5.197.3.1 `insert()` `void MHA_AC::waveform_t::insert ()`

Insert or re-insert AC variable into AC space.

Plugins should call this method from their `prepare()` and `process()` functions.

5.197.3.2 `remove()` `void MHA_AC::waveform_t::remove ()`

Remove the AC variable by reference from the AC variable space.

Plugins may call this method only from their `prepare()`, `release()` methods or their plugin destructor. It is not necessary to remove the AC variable from AC space at all if either another AC variable with the same name has replaced this variable before this variable is destroyed, or if no plugin will access this variable between its destruction and either its replacement or the MHA exit.

5.197.4 Member Data Documentation

5.197.4.1 `ac` `algo_comm_t& MHA_AC::waveform_t::ac [protected]`

AC variable space.

5.197.4.2 name `const std::string MHA_AC::waveform_t::name` [protected]

Name of this AC variable in the AC variable space.

5.197.4.3 remove_during_destructor `const bool MHA_AC::waveform_t::remove_during←
_destructor` [protected]

flag whether to remove from AC variable space in destructor.

Owned copy of exception to be thrown in outer thread.

5.203.1 Detailed Description

```
template<class FIFO>
class mha_dblbuf_t< FIFO >
```

The doublebuffer adapts block sizes between an outer process, which provides input data and takes output data, and an inner process, which processes the input signal and generates output data using a different block size than the outer process.

This class introduces the channels concept. Input and output may have different channel counts.

5.203.2 Member Typedef Documentation

5.203.2.1 value_type `template<class FIFO >`
`typedef FIFO::value_type mha_dblbuf_t< FIFO >:: value_type`

The datatype exchanged by the FIFO and this doublebuffer.

5.203.3 Constructor & Destructor Documentation

5.203.3.1 mha_dblbuf_t() `template<class FIFO >`
`mha_dblbuf_t< FIFO >:: mha_dblbuf_t (`
 `unsigned outer_size,`
 `unsigned inner_size,`
 `unsigned delay,`
 `unsigned input_channels,`
 `unsigned output_channels,`
 `const value_type & delay_data)`

Constructor creates FIFOs with specified delay.

Warning

The doublebuffer may block or raise an exception if the delay is too small. To avoid this, the delay should be

$$\text{delay} \geq (\text{inner_size} - \text{gcd}(\text{inner_size}, \text{outer_size}))$$

Parameters

<i>outer_size</i>	The block size used by the outer process.
<i>inner_size</i>	The block size used by the inner process.
<i>delay</i>	The total delay
<i>input_channels</i>	Number of input channels
<i>output_channels</i>	Number of output channels
<i>delay_data</i>	The delay consists of copies of this value.

`void mha_dblbuf_t< FIFO >::process (`
`const value_type * input_signal,`
`value_type * output_signal,`
`unsigned count) [virtual]`

The outer process has to call this method to propagate the input signal to the inner process, and receives back the output signal.

Parameters

<i>input_signal</i>	Pointer to the input signal array.
<i>output_signal</i>	Pointer to the output signal array.
<i>count</i>	The number of data instances provided and expected, lower or equal to <code>inner_size</code> given to constructor.

Exceptions

<i>MHA_Error</i> (p. 818)	When <code>count</code> is <code>> outer_size</code> as given to constructor or the underlying fifo implementation detects an error.
----------------------------------	---

5.203.4.15 input() `template<class FIFO >`
`void mha_dblbuf_t< FIFO >::input (`
`value_type * input_signal) [virtual]`

The inner process has to call this method to receive its input signal.

Parameters

<i>input_signal</i>	Array where the doublebuffer can store the signal.
---------------------	--

Exceptions

<i>MHA_Error</i> (p. 818)	When the underlying fifo implementation detects an error.
----------------------------------	---

5.203.4.16 output() `template<class FIFO >`

```
void mha_db1buf_t< FIFO >::output (
    const value_type * output_signal ) [virtual]
```

The outer process has to call this method to deliver its output signal.

Parameters

<i>output_signal</i>	Array from which doublebuffer reads outputsignal.
----------------------	---

Exceptions

<i>MHA_Error</i> (p. 818)	When the underlying fifo implementation detects an error.
----------------------------------	---

5.203.5 Member Data Documentation**5.203.5.1 outer_size** `template<class FIFO >`

`unsigned mha_dblbuf_t< FIFO >::input_channels [private]`

The number of input channels.

5.203.5.6 output_channels `template<class FIFO >`
`unsigned mha_dblbuf_t< FIFO >::output_channels [private]`

The number of output channels.

5.203.5.7 input_fifo `template<class FIFO >`
`FIFO mha_dblbuf_t< FIFO >::input_fifo [private]`

The FIFO for transporting the input signal from the outer process to the inner process.

5.203.5.8 output_fifo `template<class FIFO >`
`FIFO mha_dblbuf_t< FIFO >::output_fifo [private]`

The FIFO for transporting the output signal from the inner process to the outer process.

```
5.203.5.9 inner_error template<class FIFO >  
MHA_Error* mha_db1buf_t< FIFO >::inner_error [private]
```

Owned copy of exception to be thrown in inner thread.

```
5.203.5.10 outer_error template<class FIFO >  
MHA_Error* mha_db1buf_t< FIFO >::outer_error [private]
```

Owned copy of exception to be thrown in outer thread.

The documentation for this class was generated from the following files:

- **mha_fifo.h**
- **mha_fifo.cpp**

5.204 mha_direction_t Struct Reference

Channel source direction structure.

Public Attributes

- **mha_real_t azimuth**
azimuth in radiants
- **mha_real_t elevation**
elevation in radiants
- **mha_real_t distance**
distance in meters

5.204.1 Detailed Description

Channel source direction structure.

5.204.2 Member Data Documentation

5.204.2.1 azimuth `mha_real_t mha_direction_t::azimuth`

azimuth in radians

5.204.2.2 elevation `mha_real_t mha_direction_t::elevation`

elevation in radians

5.204.2.3 distance `mha_real_t mha_direction_t::distance`

distance in meters

The documentation for this struct was generated from the following file:

5.205 mha_drifter_fifo_t< T > Class Template Reference

A FIFO class for blocksize adaptation without Synchronization.

Inheritance diagram for `mha_drifter_fifo_t< T >`:

Public Member Functions

- virtual void **write** (const T *data, unsigned count)
write data to fifo
- virtual void **read** (T * buf, unsigned count)
Read data from fifo.
- virtual unsigned **get_fill_count** () const
Return fill_count, adding mha_drifter_fifo_t<T>::startup_zeros (p. 818) to the number of samples actually in the fifo's buffer.
- virtual unsigned **get_available_space** () const
Return available space, subtracting number of mha_drifter_fifo_t<T>::startup_zeros (p. 818) from the available_space actually present in the fifo's buffer.
- virtual unsigned **get_des_fill_count** () const
The desired fill count of this fifo.
- virtual unsigned **get_min_fill_count** () const
The minimum fill count of this fifo.
- virtual void **stop** ()
Called by mha_drifter_fifo_t<T>::read (p. 813) or mha_drifter_fifo_t<T>::write (p. 813) when their xrun in succession counter exceeds its limit.
- virtual void **starting** ()
Called by mha_drifter_fifo_t<T>::read (p. 813) or mha_drifter_fifo_t<T>::write (p. 813) when the respective flag (mha_drifter_fifo_t<T>::reader_started (p. 816) or mha_drifter_fifo_t<T>::writer_started (p. 816)) is about to be toggled from false to true.
- **mha_drifter_fifo_t** (unsigned min_fill_count, unsigned **desired_fill_count**, unsigned max_fill_count)
Create drifter FIFO.
- **mha_drifter_fifo_t** (unsigned min_fill_count, unsigned **desired_fill_count**, unsigned max_fill_count, const T &t)
Create drifter FIFO where all (initially unused) copies of T are initialized as copies of t.

Private Attributes

- const unsigned **minimum_fill_count**
The minimum fill count of this fifo.
- const unsigned **desired_fill_count**
The desired fill count of the fifo.
- bool **writer_started**
Flag set to true when write is called the first time.
- bool **reader_started**
Flag set to true when read is called for the first time.
- unsigned **writer_xruns_total**
The number of xruns seen by the writer since object instantiation.
- unsigned **reader_xruns_total**
The number of xruns seen by the reader since object instantiation.
- unsigned **writer_xruns_since_start**

- The number of xruns seen by the writer since the last start of processing.*

 - unsigned **reader_xruns_since_start**

The number of xruns seen by the reader since the last start of processing.
 - unsigned **writer_xruns_in_succession**

The number of xruns seen by the writer in succession.
 - unsigned **reader_xruns_in_succession**

The number of xruns seen by the reader in succession.
 - unsigned **maximum_writer_xruns_in_succession_before_stop**

A limit to the number of xruns seen in succession during write before the data transmission through the FIFO is stopped.
 - unsigned **maximum_reader_xruns_in_succession_before_stop**

A limit to the number of xruns seen in succession during read before the data transmission through the FIFO is stopped.
 - **mha_fifo_t< T >::value_type null_data**

The value used in place of missing data.
 - unsigned **startup_zeros**

*When processing starts, that is when both **mha_drifter_fifo_t<T>::reader_started** (p. 816) and **mha_drifter_fifo_t<T>::writer_started** (p. 816) are true, then first **mha_drifter_fifo_t<T>::desired_fill_count** (p. 816) instances of **mha_drifter_fifo_t<T>::null_data** (p. 817) are delivered to the reader.*

Additional Inherited Members

5.205.1 Detailed Description

```
template<class T>
class mha_drifter_fifo_t< T >
```

A FIFO class for blocksize adaptation without Synchronization.

Features: delay concept (desired, minimum and maximum delay), drifting support by throwing away data or inserting zeroes.

5.205.2 Constructor & Destructor Documentation

```
5.205.2.1 mha_drifter_fifo_t() [1/2] template<class T >
mha_drifter_fifo_t< T >:: mha_drifter_fifo_t (
    unsigned min_fill_count,
    unsigned desired_fill_count,
    unsigned max_fill_count )
```

Create drifter FIFO.

5.205.2.2 mha_drifter_fifo_t() [2/2] `template<class T >`

```
mha_drifter_fifo_t< T >:: mha_drifter_fifo_t (
    unsigned min_fill_count,
    unsigned desired_fill_count,
    unsigned max_fill_count,
    const T & t )
```

Create drifter FIFO where all (initially unused) copies of T are initialized as copies of t.

5.205.3 Member Function Documentation**5.205.3.1 write()** `template<class T >`

```
void mha_drifter_fifo_t< T >::write (
    const T * data,
    unsigned count ) [virtual]
```

write data to fifo

Sets **writer_started** (p. 816) to true.

When processing has started, i.e. both **reader_started** (p. 816) and **writer_started** (p. 816) are true, write specified amount of data to the fifo. If there is not enough space available, then the exceeding data is lost and the writer xrun counters are increased.

Processing is stopped when **writer_xruns_in_succession** (p. 817) exceeds **maximum_↔ writer_xruns_in_succession_before_stop** (p. 817).

Parameters

<i>data</i>	Pointer to source data.
<i>count</i>	Number of instances to copy

Reimplemented from **mha_fifo_t**< T > (p. 833).

5.205.3.2 read() `template<class T >`

```
void mha_drifter_fifo_t< T >::read (
    T * buf,
    unsigned count ) [virtual]
```

Read data from fifo.

Sets **reader_started** (p. 816) to true.

When processing has started, i.e. both **reader_started** (p. 816) and **writer_started** (p. 816) are true, then read specified amount of data from the fifo. As long as **startup_zeros** (p. 818) is > 0 , **null_data** (p. 817) is delivered to the reader and **startup_zeros** (p. 818) is diminished. Only when **startup_zeros** (p. 818) has reached 0, data is actually read from the fifo's buffer.

If the read would cause the fifo's fill count to drop below **minimum_fill_count** (p. 815), then only so much data are read that **minimum_fill_count** (p. 815) entries remain in the fifo, the missing data is replaced with **null_data** (p. 817), and the reader xrun counters are increased.

Processing is stopped when **reader_xruns_in_succession** (p. 817) exceeds **maximum_reader_xruns_in_succession_before_stop** (p. 817).

Parameters

<i>buf</i>	Pointer to the target buffer
<i>count</i>	Number of instances to copy

Reimplemented from **mha_fifo_t< T >** (p. 834).

5.205.3.3 get_fill_count() `template<class T >`
`unsigned mha_drifter_fifo_t< T >::get_fill_count [virtual]`

Return `fill_count`, adding **mha_drifter_fifo_t<T>::startup_zeros** (p. 818) to the number of samples actually in the fifo's buffer.

Reimplemented from **mha_fifo_t< T >** (p. 834).

5.205.3.4 get_available_space() `template<class T >`
`unsigned mha_drifter_fifo_t< T >::get_available_space [virtual]`

Return available space, subtracting number of **mha_drifter_fifo_t<T>::startup_zeros** (p. 818) from the `available_space` actually present in the fifo's buffer.

TODO: uncertain if this is a good idea.

Reimplemented from **mha_fifo_t< T >** (p. 834).

5.205.3.5 get_des_fill_count() `template<class T >`

```
virtual unsigned mha_drifter_fifo_t< T >::get_des_fill_count ( ) const [inline],  
[virtual]
```

The desired fill count of this fifo.

5.205.3.6 get_min_fill_count() `template<class T >`

```
virtual unsigned mha_drifter_fifo_t< T >::get_min_fill_count ( ) const [inline],  
[virtual]
```

The minimum fill count of this fifo.

5.205.3.7 stop() `template<class T >`

```
void mha_drifter_fifo_t< T >::stop [virtual]
```

Called by `mha_drifter_fifo_t<T>::read` (p. 813) or `mha_drifter_fifo_t<T>::write` (p. 813) when their xrun in succession counter exceeds its limit.

Called by `read` (p. 813) or `write` (p. 813) when their xrun in succession counter exceeds its limit.

May also be called explicitly.

5.205.3.8 starting() `template<class T >`

```
void mha_drifter_fifo_t< T >::starting [virtual]
```

Called by `mha_drifter_fifo_t<T>::read` (p. 813) or `mha_drifter_fifo_t<T>::write` (p. 813) when the respective flag (`mha_drifter_fifo_t<T>::reader_started` (p. 816) or `mha_drifter_fifo_t<T>::writer_started` (p. 816)) is about to be toggled from false to true.

The fifo's buffer is emptied, this method resets `startup_zeros` (p. 818) to `desired_fill_count` (p. 816), and it also resets `reader_xruns_since_start` (p. 817) and `writer_xruns_since_start` (p. 816) to 0.

5.205.4 Member Data Documentation

5.205.4.1 minimum_fill_count `template<class T >`
`const unsigned mha_drifter_fifo_t< T >::minimum_fill_count [private]`

The minimum fill count of this fifo.

5.205.4.2 desired_fill_count `template<class T >`
`const unsigned mha_drifter_fifo_t< T >::desired_fill_count [private]`

The desired fill count of the fifo.

The fifo is initialized with this amount of data when data transmission starts.

5.205.4.3 writer_started `template<class T >`
`bool mha_drifter_fifo_t< T >::writer_started [private]`

Flag set to true when write is called the first time.

5.205.4.4 reader_started `template<class T >`
`bool mha_drifter_fifo_t< T >::reader_started [private]`

Flag set to true when read is called for the first time.

5.205.4.5 writer_xruns_total `template<class T >`
`unsigned mha_drifter_fifo_t< T >::writer_xruns_total [private]`

The number of xruns seen by the writer since object instantiation.

5.205.4.6 reader_xruns_total `template<class T >`
`unsigned mha_drifter_fifo_t< T >::reader_xruns_total [private]`

The number of xruns seen by the reader since object instantiation.

5.205.4.7 writer_xruns_since_start `template<class T >``unsigned mha_drifter_fifo_t< T >::writer_xruns_since_start [private]`

The number of xruns seen by the writer since the last start of processing.

5.205.4.8 reader_xruns_since_start `template<class T >``unsigned mha_drifter_fifo_t< T >::reader_xruns_since_start [private]`

The number of xruns seen by the reader since the last start of processing.

5.205.4.9 writer_xruns_in_succession `template<class T >``unsigned mha_drifter_fifo_t< T >::writer_xruns_in_succession [private]`

The number of xruns seen by the writer in succession.

Reset to 0 every time a write succeeds without xrun.

5.205.4.10 reader_xruns_in_succession `template<class T >``unsigned mha_drifter_fifo_t< T >::reader_xruns_in_succession [private]`

The number of xruns seen by the reader in succession.

Reset to 0 every time a read succeeds without xrun.

5.205.4.11 maximum_writer_xruns_in_succession_before_stop `template<class T >``unsigned mha_drifter_fifo_t< T >::maximum_writer_xruns_in_succession_before_stop [private]`

A limit to the number of xruns seen in succession during write before the data transmission through the FIFO is stopped.

5.205.4.12 maximum_reader_xruns_in_succession_before_stop `template<class T >``unsigned mha_drifter_fifo_t< T >::maximum_reader_xruns_in_succession_before_stop [private]`

A limit to the number of xruns seen in succession during read before the data transmission through the FIFO is stopped.

```

5.205.4.13 null_data template<class T >
mha_fifo_t<T>:: value_type mha_drifter_fifo_t< T >::null_data [private]

```

The value used in place of missing data.

```

5.205.4.14 startup_zeros template<class T >
unsigned mha_drifter_fifo_t< T >::startup_zeros [private]

```

When processing starts, that is when both **mha_drifter_fifo_t**<T>::**reader_started** (p. 816) and **mha_drifter_fifo_t**<T>::**writer_started** (p. 816) are true, then first **mha_drifter_fifo_t**<T>::**desired_fill_count** (p. 816) instances of **mha_drifter_fifo_t**<T>::**null_data** (p. 817) are delivered to the reader.

These **null_data** (p. 817) instances are not transmitted through the fifo because filling the fifo with enough **null_data** (p. 817) might not be realtime safe and this filling has to be initiated by **starting** (p. 815) or **stop** (p. 815) (this implementation: **starting** (p. 815)) which are be called with realtime constraints.

The documentation for this class was generated from the following file:

- **mha_fifo.h**

5.206 MHA_Error Class Reference

Error reporting exception class.

Inherits exception.

Public Member Functions

- **MHA_Error** (const char *file, int line, const char *fmt,...) __attribute__((__format__(printf, 3, 4)))

5.206.1 Detailed Description

Error reporting exception class.

This class is used for error handling in the openMHA. It is used by the openMHA kernel and by the openMHA toolbox library. Please note that exceptions should not be used accross ANSI-C interfaces. It is necessary to catch exceptions within the library.

The **MHA_Error** (p. 818) class holds source file name, line number and an error message.

5.206.2 Constructor & Destructor Documentation

5.206.2.1 MHA_Error() [1/2] `MHA_Error::MHA_Error (`
`const char * s_file,`
`int l,`
`const char * fmt,`
`...)`

Create an instance of a **MHA_Error** (p. 818).

Parameters

<i>s_file</i>	source file name (FILE)
<i>l</i>	source line (LINE)
<i>fmt</i>	format string for error message (as in printf)

5.206.2.2 MHA_Error() [2/2] `MHA_Error::MHA_Error (`
`const MHA_Error & p)`

5.206.2.3 `~MHA_Error()` `MHA_Error::~~MHA_Error () throw ()`

5.206.3 Member Function Documentation

5.206.3.1 `operator=(` `MHA_Error & MHA_Error::operator= (`
`const MHA_Error & p)`

5.206.3.2 `get_msg()` `const char* MHA_Error::get_msg () const [inline]`

Return the error message without source position.

5.206.3.3 `get_longmsg()` `const char* MHA_Error::get_longmsg () const [inline]`

Return the error message with source position.

5.206.3.4 `what()` `const char* MHA_Error::what () const throw () [inline]`

overwrite `std::exception::what()`

5.206.4 Member Data Documentation

5.206.4.1 `msg` `char* MHA_Error::msg [private]`

5.206.4.2 longmsg `char* MHA_Error::longmsg [private]`

The documentation for this class was generated from the following files:

- `mha_error.hh`
- `mha_error.cpp`

5.207 mha_fifo_lf_t< T > Class Template Reference

A lock-free FIFO class for transferring data from a producer thread to a consumer thread.

Inheritance diagram for `mha_fifo_lf_t< T >`:

Public Member Functions

- virtual void **write** (const T *data, unsigned count) override
Write specified ammount of data to the fifo.
- virtual void **read** (T *outbuf, unsigned count) override
Read data from fifo.
- virtual unsigned **get_fill_count** () const override
***get_fill_count()** (p. 823) must only be called by the reader thread*
- virtual unsigned **get_available_space** () const override
***get_available_space()** (p. 823) must only be called by the writer thread*
- **mha_fifo_lf_t** (unsigned max_fill_count, const T &t=T())
Create FIFO with fixed buffer size.

Private Attributes

- `std::atomic< const T * >` **atomic_write_ptr**
atomic copy of the write_ptr, only modified by the producer thread
- `std::atomic< const T * >` **atomic_read_ptr**
atomic copy of the read ptr, only modified by the consumer thread

Additional Inherited Members

5.207.1 Detailed Description

```
template<class T>
class mha_fifo_lf_t< T >
```

A lock-free FIFO class for transferring data from a producer thread to a consumer thread.

Inherits basic functionality from **mha_fifo_t** (p. 830), adds release-acquire semantics to ensure consumer that the fill count or free space deduced from read and write pointers is consistent with the actual data. Copying, moving, and assignment of FIFO are forbidden by base class.

5.207.2 Constructor & Destructor Documentation

```
5.207.2.1 mha_fifo_lf_t() template<class T >
mha_fifo_lf_t< T >:: mha_fifo_lf_t (
    unsigned max_fill_count,
    const T & t = T() ) [inline], [explicit]
```

Create FIFO with fixed buffer size.

All (initially unused) instances of T are initialized as copies of t

5.207.3 Member Function Documentation

```
5.207.3.1 write() template<class T >
virtual void mha_fifo_lf_t< T >::write (
    const T * data,
    unsigned count ) [inline], [override], [virtual]
```

Write specified amount of data to the fifo.

Must only be called by the writer thread.

Parameters

<i>data</i>	Pointer to source data.
<i>count</i>	Number of instances to copy.

Exceptions

<i>MHA_Error</i> (p. 818)	when there is not enough space available.
----------------------------------	---

Reimplemented from `mha_fifo_t< T >` (p. 833).

```
5.207.3.2 read() template<class T >
virtual void mha_fifo_lf_t< T >::read (
    T * outbuf,
    unsigned count ) [inline], [override], [virtual]
```

Read data from fifo.

Must only be called by the reader thread.

Parameters

<i>outbuf</i>	Pointer to the target buffer.
<i>count</i>	Number of instances to copy.

Exceptions

<i>MHA_Error</i> (p. 818)	when there is not enough data available.
----------------------------------	--

Reimplemented from `mha_fifo_t< T >` (p. 834).

```
5.207.3.3 get_fill_count() template<class T >
virtual unsigned mha_fifo_lf_t< T >::get_fill_count ( ) const [inline], [override],
[virtual]
```

`get_fill_count()` (p. 823) must only be called by the reader thread

Reimplemented from `mha_fifo_t< T >` (p. 834).

5.207.3.4 get_available_space() `template<class T >`
`virtual unsigned mha_fifo_lf_t< T >::get_available_space () const [inline], [override], [virtual]`

get_available_space() (p. 823) must only be called by the writer thread

Reimplemented from `mha_fifo_t< T >` (p. 834).

5.207.4 Member Data Documentation

5.207.4.1 atomic_write_ptr `template<class T >`
`std::atomic<const T *> mha_fifo_lf_t< T >::atomic_write_ptr [private]`

atomic copy of the write_ptr, only modified by the producer thread

5.207.4.2 atomic_read_ptr `template<class T >`
`std::atomic<const T *> mha_fifo_lf_t< T >::atomic_read_ptr [private]`

atomic copy of the read_ptr, only modified by the consumer thread

The documentation for this class was generated from the following file:

- `mha_fifo.h`

5.208 mha_fifo_lw_t< T > Class Template Reference

This FIFO uses locks to synchronize access.

Inheritance diagram for `mha_fifo_lw_t< T >`:

Public Member Functions

- virtual void **write** (const T *data, unsigned count)
write specified ammount of data to the fifo.
- virtual void **read** (T *buf, unsigned count)
read data from fifo.
- **mha_fifo_lw_t** (unsigned max_fill_count)
Create FIFO with fixed buffer size.
- virtual ~**mha_fifo_lw_t** ()
release synchronization object
- virtual void **set_error** (unsigned index, **MHA_Error** * error)
Process waiting for more data or space should bail out, throwing this error.

Private Attributes

- **mha_fifo_thread_platform_t** * sync
platform specific thread synchronization
- **MHA_Error** * error [2]
If waiting for synchronization should be aborted then exception to be thrown by reader process (index 0) or writer process (index 1) has to be placed here.

Additional Inherited Members

5.208.1 Detailed Description

```
template<class T>
class mha_fifo_lw_t< T >
```

This FIFO uses locks to synchronize access.

Reading and writing can block until the operation can be executed.

5.208.2 Constructor & Destructor Documentation

```
5.208.2.1 mha_fifo_lw_t() template<class T >
mha_fifo_lw_t< T >:: mha_fifo_lw_t (
    unsigned max_fill_count ) [explicit]
```

Create FIFO with fixed buffer size.

5.208.2.2 `~mha_fifo_lw_t()` `template<class T >`
`mha_fifo_lw_t< T >::~~mha_fifo_lw_t` [virtual]

release synchronization object

5.208.3 Member Function Documentation

5.208.3.1 `write()` `template<class T >`
`void mha_fifo_lw_t< T >::write (`
`const T * data,`
`unsigned count)` [virtual]

write specified ammount of data to the fifo.

If there is not enough space, then wait for more space.

Parameters

<i>data</i>	Pointer to source data.
<i>count</i>	Number of instances to copy.

Exceptions

<i>MHA_Error</i> (p. 818)	when detecting a deadlock situation.
---	--------------------------------------

Reimplemented from `mha_fifo_t< T >` (p. [833](#)).

5.208.3.2 `read()` `template<class T >`
`void mha_fifo_lw_t< T >::read (`
`T * buf,`
`unsigned count)` [virtual]

read data from fifo.

If there is not enough data, then wait for more data.

Parameters

<i>buf</i>	Pointer to the target buffer.
<i>count</i>	Number of instances to copy.

Exceptions

MHA_Error (p. 818)	when detecting a deadlock situation.
---------------------------	--------------------------------------

Reimplemented from `mha_fifo_t< T >` (p. 834).

5.208.3.3 set_error() `template<class T >`
`void mha_fifo_lw_t< T >::set_error (`
 `unsigned index,`
 `MHA_Error * error) [virtual]`

Process waiting for more data or space should bail out, throwing this error.

Parameters

<i>index</i>	Use 0 for terminating reader, 1 for terminating writer.
<i>error</i>	MHA_Error (p. 818) to be thrown

5.208.4 Member Data Documentation

5.208.4.1 sync `template<class T >`
`mha_fifo_thread_platform_t* mha_fifo_lw_t< T >::sync [private]`
 platform specific thread synchronization

5.208.4.2 error `template<class T >`
`MHA_Error* mha_fifo_lw_t< T >::error[2] [private]`

If waiting for synchronization should be aborted then exception to be thrown by reader process (index 0) or writer process (index 1) has to be placed here.

The documentation for this class was generated from the following files:

- `mha_fifo.h`
- `mha_fifo.cpp`

The documentation for this class was generated from the following file:

- `mha_fifo.h`

5.210 `mha_fifo_t< T >` Class Template Reference

A FIFO class.

Inheritance diagram for `mha_fifo_t< T >`:

Public Types

- typedef std::vector< T >:: **value_type value_type**
The data type exchanged by this fifo.

Public Member Functions

- virtual void **write** (const T *data, unsigned count)
write specified ammount of data to the fifo.
- virtual void **read** (T *outbuf, unsigned count)
read data from fifo
- virtual unsigned **get_fill_count** () const
Read-only access to fill_count.
- virtual unsigned **get_available_space** () const
Read-only access to available_space.
- virtual unsigned **get_max_fill_count** () const
The capacity of this fifo.
- **mha_fifo_t** (unsigned max_fill_count, const T &t=T())
Create FIFO with fixed buffer size, where all (initially unused) instances of T are initialized as copies of t.
- virtual **~mha_fifo_t** ()=default
Make destructor virtual.
- **mha_fifo_t** (const **mha_fifo_t** &)=delete
Copy constructor.
- **mha_fifo_t** (**mha_fifo_t** &&)=delete
Move constructor.
- **mha_fifo_t**< T > & **operator=** (const **mha_fifo_t**< T > &)=delete
Assignment operator.
- **mha_fifo_t**< T > & **operator=** (**mha_fifo_t**< T > &&)=delete
Move assignment operator.

Protected Member Functions

- void **clear** ()
Empty the fifo at once.
- const T * **get_write_ptr** () const
read-only access to the write pointer for derived classes
- const T * **get_read_ptr** () const
read-only access to read pointer for derived classes
- unsigned **get_fill_count** (const T *wp, const T *rp) const
Compute fill count from given write pointer and read pointer.

Private Attributes

- `std::vector< T > buf`
The memory allocated to store the data in the fifo.
- `T * write_ptr`
points to location where to write next
- `const T * read_ptr`
points to location where to read next

5.210.1 Detailed Description

```
template<class T>
class mha_fifo_t< T >
```

A FIFO class.

Synchronization: None. Use external synchronisation or synchronization in inheriting class. Assignment, copy and move constructors are disabled.

5.210.2 Member Typedef Documentation

```
5.210.2.1 value_type template<class T >
typedef std::vector<T>:: value_type mha_fifo_t< T >:: value_type
```

The data type exchanged by this fifo.

5.210.3 Constructor & Destructor Documentation

```
5.210.3.1 mha_fifo_t() [1/3] template<class T >
mha_fifo_t< T >:: mha_fifo_t (
    unsigned max_fill_count,
    const T & t = T() ) [explicit]
```

Create FIFO with fixed buffer size, where all (initially unused) instances of T are initialized as copies of t.

Parameters

<i>max_fill_count</i>	The maximum number of instances of T that can be held at the same time inside the fifo.
<i>The</i>	fifo allocates a vector of max_fill_count+1 instances of T for storage, one of which is always unused.

5.210.3.2 `~mha_fifo_t()` `template<class T >`

```
virtual mha_fifo_t< T >::~~mha_fifo_t ( ) [virtual], [default]
```

Make destructor virtual.

5.210.3.3 `mha_fifo_t()` [2/3] `template<class T >`

```
mha_fifo_t< T >::~ mha_fifo_t (
    const mha_fifo_t< T > & ) [delete]
```

Copy constructor.

5.210.3.4 `mha_fifo_t()` [3/3] `template<class T >`

```
mha_fifo_t< T >::~ mha_fifo_t (
    mha_fifo_t< T > && ) [delete]
```

Move constructor.

5.210.4 Member Function Documentation**5.210.4.1** `write()` `template<class T >`

```
void mha_fifo_t< T >::write (
    const T * data,
    unsigned count ) [virtual]
```

write specified ammount of data to the fifo.

Parameters

<i>data</i>	Pointer to source data.
<i>count</i>	Number of instances to copy

Exceptions

<i>MHA_Error</i> (p. 818)	when there is not enough space available.
----------------------------------	---

Reimplemented in `mha_fifo_lf_t< T >` (p. 822), `mha_fifo_lw_t< T >` (p. 826), `mha_drifter_fifo_t< T >` (p. 813), `mha_fifo_lf_t< mha_real_t >` (p. 822), `mha_fifo_lw_t< mha_real_t >` (p. 826), and `mha_fifo_lf_t< MHA_AC::acspace2matrix_t >` (p. 822).

```
5.210.4.2 read() template<class T >
void mha_fifo_t< T >::read (
    T * outbuf,
    unsigned count ) [virtual]
```

read data from fifo

Parameters

<i>outbuf</i>	Pointer to the target buffer.
<i>count</i>	Number of instances to copy.

Exceptions

<i>MHA_Error</i> (p. 818)	when there is not enough data available.
----------------------------------	--

Reimplemented in `mha_fifo_lf_t< T >` (p. 823), `mha_fifo_lw_t< T >` (p. 826), `mha_drifter_fifo_t< T >` (p. 813), `mha_fifo_lf_t< mha_real_t >` (p. 823), `mha_fifo_lw_t< mha_real_t >` (p. 826), and `mha_fifo_lf_t< MHA_AC::acspace2matrix_t >` (p. 823).

```
5.210.4.3 get_fill_count() [1/2] template<class T >
virtual unsigned mha_fifo_t< T >::get_fill_count ( ) const [inline], [virtual]
```

Read-only access to fill_count.

Reimplemented in `mha_fifo_lf_t< T >` (p. 823), `mha_fifo_lf_t< mha_real_t >` (p. 823), `mha_fifo_lf_t< MHA_AC::acspace2matrix_t >` (p. 823), and `mha_drifter_fifo_t< T >` (p. 814).

5.210.4.4 get_available_space() `template<class T >`
`unsigned mha_fifo_t< T >::get_available_space [virtual]`

Read-only access to available_space.

Reimplemented in `mha_fifo_lf_t< T >` (p. 823), `mha_fifo_lf_t< mha_real_t >` (p. 823), `mha_fifo_lf_t< MHA_AC::acspace2matrix_t >` (p. 823), and `mha_drifter_fifo_t< T >` (p. 814).

5.210.4.5 get_max_fill_count() `template<class T >`
`virtual unsigned mha_fifo_t< T >::get_max_fill_count () const [inline], [virtual]`

The capacity of this fifo.

5.210.4.6 operator=() [1/2] `template<class T >`
`mha_fifo_t<T>& mha_fifo_t< T >::operator= (`
`const mha_fifo_t< T > &) [delete]`

Assignment operator.

5.210.4.7 operator=() [2/2] `template<class T >`
`mha_fifo_t<T>& mha_fifo_t< T >::operator= (`
`mha_fifo_t< T > &&) [delete]`

Move assignment operator.

5.210.4.8 clear() `template<class T >`
`void mha_fifo_t< T >::clear () [inline], [protected]`

Empty the fifo at once.

Should be called by the reader, or when the reader is inactive.

5.210.4.9 get_write_ptr() `template<class T >`
`const T* mha_fifo_t< T >::get_write_ptr () const [inline], [protected]`

read-only access to the write pointer for derived classes

5.210.4.10 get_read_ptr() `template<class T >`
`const T* mha_fifo_t< T >::get_read_ptr () const [inline], [protected]`

read-only access to read pointer for derived classes

5.210.4.11 get_fill_count() [2/2] `template<class T >`
`unsigned mha_fifo_t< T >::get_fill_count (`
`const T * wp,`
`const T * rp) const [inline], [protected]`

Compute fill count from given write pointer and read pointer.

Parameters

<i>wp</i>	Write pointer.
<i>rp</i>	Read pointer.

Precondition

wp and *rp* must point to an instance of T inside buf.

Returns

Number of elements that can be read from the fifo when *wp* and *rp* have the given values.

5.210.5 Member Data Documentation

5.210.5.1 buf `template<class T >`
`std::vector<T> mha_fifo_t< T >::buf [private]`

The memory allocated to store the data in the fifo.

At least one location in *buf* is always unused, because we have `max_fill_count + 1` possible fillcounts [0:`max_fill_count`] that we need to distinguish.

5.210.5.2 write_ptr `template<class T >`
`T* mha_fifo_t< T >::write_ptr [private]`

points to location where to write next

5.210.5.3 read_ptr `template<class T >`
`const T* mha_fifo_t< T >::read_ptr [private]`

points to location where to read next

The documentation for this class was generated from the following file:

guard_t (`
`mha_fifo_thread_platform_t * sync) [inline]`

5.211.2.2 ~mha_fifo_thread_guard_t() `mha_fifo_thread_guard_t::~~mha_fifo_thread_↔
guard_t () [inline]`

5.211.3 Member Data Documentation

5.211.3.1 sync `mha_fifo_thread_platform_t* mha_fifo_thread_guard_t::sync [private]`

The documentation for this class was generated from the following file:

- `mha_fifo.h`

5.212 mha_fifo_thread_platform_t Class Reference

Abstract base class for synchronizing multithreaded (producer/consumer) fifo operations.

Inheritance diagram for `mha_fifo_thread_platform_t`:

Public Member Functions

- virtual void **acquire_mutex** ()=0
Calling thread waits until it acquires the lock.
- virtual void **release_mutex** ()=0
Calling thread releases the lock.
- virtual void **wait_for_decrease** ()=0
Calling producer thread must own the lock.
- virtual void **wait_for_increase** ()=0
Calling consumer thread must own the lock.
- virtual void **increment** ()=0
To be called by producer thread after producing.
- virtual void **decrement** ()=0
To be called by consumer thread after consuming.
- virtual **~mha_fifo_thread_platform_t** ()
Make destructor virtual.
- **mha_fifo_thread_platform_t** ()
Make default constructor accessible.

Private Member Functions

- **mha_fifo_thread_platform_t** (const **mha_fifo_thread_platform_t** &)
- **mha_fifo_thread_platform_t** & **operator=** (const **mha_fifo_thread_platform_t** &)

5.212.1 Detailed Description

Abstract base class for synchronizing multithreaded (producer/consumer) fifo operations.

Works only with single producer and single consumer.

5.212.2 Constructor & Destructor Documentation

5.212.2.1 ~mha_fifo_thread_platform_t() virtual **mha_fifo_thread_platform_t::~mha_fifo_thread_platform_t** () [inline], [virtual]

Make destructor virtual.

5.212.2.2 mha_fifo_thread_platform_t() [1/2] mha_fifo_thread_platform_t::mha_fifo_thread_platform_t (const mha_fifo_thread_platform_t &) [private]

5.212.2.3 mha_fifo_thread_platform_t() [2/2] mha_fifo_thread_platform_t::mha_fifo_thread_platform_t () [inline]

Make default constructor accessible.

5.212.3 Member Function Documentation

5.212.3.1 acquire_mutex() virtual void mha_fifo_thread_platform_t::acquire_mutex () [pure virtual]

Calling thread waits until it acquires the lock.

Must not be called when the lock is already acquired.

Implemented in **mha_fifo_posix_threads_t** (p. [829](#)).

5.212.3.2 release_mutex() virtual void mha_fifo_thread_platform_t::release_mutex () [pure virtual]

Calling thread releases the lock.

May only be called when lock is owned.

Implemented in **mha_fifo_posix_threads_t** (p. [829](#)).

5.212.3.3 wait_for_decrease() `virtual void mha_fifo_thread_platform_t::wait_for_decrease () [pure virtual]`

Calling producer thread must own the lock.

Method releases lock, and waits for consumer thread to call decrease(). Then reaquires lock and returns

Implemented in **mha_fifo_posix_threads_t** (p. [829](#)).

5.212.3.4 wait_for_increase() `virtual void mha_fifo_thread_platform_t::wait_for_increase () [pure virtual]`

Calling consumer thread must own the lock.

Method releases lock, and waits for producer thread to call increase(). Then reaquires lock and returns

Implemented in **mha_fifo_posix_threads_t** (p. [829](#)).

5.212.3.5 increment() `virtual void mha_fifo_thread_platform_t::increment () [pure virtual]`

To be called by producer thread after producing.

Producer thread needs to own the lock to call this method.

Implemented in **mha_fifo_posix_threads_t** (p. [829](#)).

5.212.3.6 decrement() `virtual void mha_fifo_thread_platform_t::decrement () [pure virtual]`

To be called by consumer thread after consuming.

Consumer thread needs to own the lock to call this method.

Implemented in **mha_fifo_posix_threads_t** (p. [829](#)).

```

5.212.3.7 operator=() mha_fifo_thread_platform_t& mha_fifo_thread_platform_t↔
::operator= (
    const mha_fifo_thread_platform_t & ) [private]

```

The documentation for this class was generated from the following file:

5.214 mha_rt_fifo_element_t< T > Class Template Reference

Object wrapper for **mha_rt_fifo_t** (p. [844](#)).

Public Member Functions

- **mha_rt_fifo_element_t (T * data)**
Constructor.
- **~mha_rt_fifo_element_t ()**

Public Attributes

- **mha_rt_fifo_element_t< T > * next**
Pointer to next fifo element. NULL for the last (newest) fifo element.
- **bool abandoned**
Indicates that this element will no longer be used and may be deleted.
- **T * data**
Pointer to user data.

5.214.1 Detailed Description

```
template<class T>
class mha_rt_fifo_element_t< T >
```

Object wrapper for `mha_rt_fifo_t` (p. 844).

5.214.2 Constructor & Destructor Documentation

```
5.214.2.1 mha_rt_fifo_element_t() template<class T >
mha_rt_fifo_element_t< T >:: mha_rt_fifo_element_t (
    T * data ) [inline]
```

Constructor.

This element assumes ownership of user data.

Parameters

<i>data</i>	User data. Has to be allocated on the heap with standard operator new, because it will be deleted in this element's destructor.
-------------	---

```
5.214.2.2 ~mha_rt_fifo_element_t() template<class T >
mha_rt_fifo_element_t< T >::~~ mha_rt_fifo_element_t ( ) [inline]
```

5.214.3 Member Data Documentation

5.214.3.1 next `template<class T >`
`mha_rt_fifo_element_t<T>* mha_rt_fifo_element_t< T >::next`

Pointer to next fifo element. NULL for the last (newest) fifo element.

5.214.3.2 abandoned `template<class T >`
`bool mha_rt_fifo_element_t< T >::abandoned`

Indicates that this element will no longer be used and may be deleted.

5.214.3.3 data `template<class T >`
`T* mha_rt_fifo_element_t< T >::data`

Pointer to user data.

The documentation for this class was generated from the following file:

- **mha_fifo.h**

5.215 mha_rt_fifo_t< T > Class Template Reference

Template class for thread safe, half real time safe fifo without explicit locks.

Public Member Functions

- **mha_rt_fifo_t ()**
Construct empty fifo.
- **~mha_rt_fifo_t ()**
Destructor will delete all data currently in the fifo.
- **T * poll ()**
Retrieve the latest element in the Fifo.
- **T * poll_1 ()**
Retrieve the next element in the Fifo, if there is one, and mark the previous element as abandoned.
- **void push (T *data)**
Add element to the Fifo.

Private Member Functions

- void **remove_abandoned** ()
Deletes abandoned elements.
- void **remove_all** ()
Deletes all elements.

Private Attributes

- **mha_rt_fifo_element_t< T > * root**
The first element in the fifo. Deleting elements starts here.
- **mha_rt_fifo_element_t< T > * current**
*The element most recently returned by **poll** (p. 846) or **poll_1** (p. 846).*

5.215.1 Detailed Description

```
template<class T>
class mha_rt_fifo_t< T >
```

Template class for thread safe, half real time safe fifo without explicit locks.

Reading from this fifo is realtime safe, writing to it is not. This fifo is designed for objects that were constructed on the heap. It assumes ownership of these objects and calls delete on them when they are no longer used. Objects remain inside the Fifo while being used by the reader.

A new fifo element is inserted by using **push** (p. 846). The push operation is not real time safe, it allocates and deallocates memory. The latest element is retrieved by calling **poll** (p. 846). This operation will skip fifo elements if more than one **push** (p. 846) has been occurred since the last poll. To avoid skipping, call the **poll_1** (p. 846) operation instead.

5.215.2 Constructor & Destructor Documentation

```
5.215.2.1 mha_rt_fifo_t() template<class T >
mha_rt_fifo_t< T >:: mha_rt_fifo_t ( ) [inline]
```

Construct empty fifo.

```
5.215.2.2 ~mha_rt_fifo_t()  template<class T >
mha_rt_fifo_t< T >::~~ mha_rt_fifo_t ( ) [inline]
```

Destructor will delete all data currently in the fifo.

5.215.3 Member Function Documentation

```
5.215.3.1 poll()  template<class T >
T* mha_rt_fifo_t< T >::poll ( ) [inline]
```

Retrieve the latest element in the Fifo.

Will skip fifo elements if more than one element has been added since last poll invocation. Will return the same element as on last call if no elements have been added in the mean time. Marks former elements as abandoned.

Returns

The latest element in this Fifo. Returns NULL if the Fifo is empty.

```
5.215.3.2 poll_1()  template<class T >
T* mha_rt_fifo_t< T >::poll_1 ( ) [inline]
```

Retrieve the next element in the Fifo, if there is one, and mark the previous element as abandoned.

Else, if there is no newer element, returns the same element as on last **poll()** (p. 846) or **poll_1()** (p. 846) invocation.

Returns

The next element in this Fifo, if there is one, or the same as before. Returns NULL if the Fifo is empty.

```
5.215.3.3 push()  template<class T >
void mha_rt_fifo_t< T >::push (
    T * data ) [inline]
```

Add element to the Fifo.

Deletes abandoned elements in the fifo.

Parameters

<i>data</i>	The new user data to place at the end of the fifo. After this invocation, the fifo is the owner of this object and will delete it when it is no longer used. data must have been allocated on the heap with standard operator new.
-------------	--

5.215.3.4 remove_abandoned() `template<class T >`

```
void mha_rt_fifo_t< T >::remove_abandoned ( ) [inline], [private]
```

Deletes abandoned elements.

5.215.3.5 remove_all() `template<class T >`

```
void mha_rt_fifo_t< T >::remove_all ( ) [inline], [private]
```

Deletes all elements.

5.215.4 Member Data Documentation

5.215.4.1 root `template<class T >`

```
mha_rt_fifo_element_t<T>* mha_rt_fifo_t< T >::root [private]
```

The first element in the fifo. Deleting elements starts here.

5.215.4.2 current `template<class T >`

```
mha_rt_fifo_element_t<T>* mha_rt_fifo_t< T >::current [private]
```

The element most recently returned by **poll** (p. 846) or **poll_1** (p. 846).

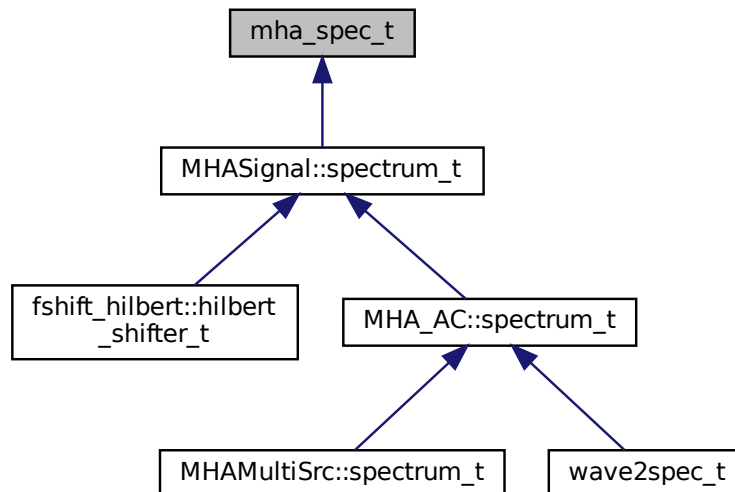

Searching for new elements starts here.

The documentation for this class was generated from the following file:

- **mha_fifo.h**

5.216 mha_spec_t Struct Reference

Inheritance diagram for mha_spec_t:

Public Attributes

- **mha_complex_t * buf**
signal buffer
- unsigned int **num_channels**
number of channels
- unsigned int **num_frames**
number of frames in each channel
- **mha_channel_info_t * channel_info**
detailed channel description

5.216.1 Detailed Description

```

\ingroup mhasignal
\brief Spectrum signal structure
  
```

This structure contains the short time fourier transform output of the windowed input signal. The member `num_frames` describes the number of frequency bins in each channel. For an even FFT length N , this is $N/2 + 1$. With odd FFT lengths, it is $(N + 1)/2$. The imaginary part

of the first bin is zero. For even FFT lengths, also the imaginary part at the Nyquist frequency is zero.

buf[k].re	<i>Re(0)</i>	<i>Re(1)</i>	<i>Re(2)</i>	<i>Re(3)</i>	<i>Re(4)</i>	...	<i>Re(n/2-1)</i>	<i>Re(n/2)</i>
buf[k].im		<i>Im(1)</i>	<i>Im(2)</i>	<i>Im(3)</i>	<i>Im(4)</i>	...	<i>Im(n/2-1)</i>	
k	0	1	2	3	4		n/2-1	n/2

Figure 4 Data order of FFT spectrum.

Only the FFT bins for the positive frequencies, 0, and the Nyquist frequency are stored in this structure. The negative frequencies are not stored, because for a real-valued time signal they are the complex conjugates of the positive frequencies.

The negative frequencies still contribute to the signal's level. Refer to **Central Calibration** (p. 3) for a description of the scaling and how the level would be computed from the spectrum. It is recommended to use the library function **MHASignal::rmslevel** (p. 53) to compute the unweighted level correctly in Pascal, or **MHASignal::colored_intensity** (p. 54) to compute a possibly weighted intensity.

5.216.2 Member Data Documentation

5.216.2.4 **channel_info** `mha_channel_info_t*` `mha_spec_t::channel_info`

detailed channel description

The documentation for this struct was generated from the following file:

- **mha.hh**

5.217 **mha_stash_environment_variable_t** Class Reference

This class changes the value of an environment variable when constructed and restores the original state of the environment variable when destroyed.

Public Member Functions

- **mha_stash_environment_variable_t** (const std::string & **variable_name**, const std::string &new_content)
- **~mha_stash_environment_variable_t** ()

Private Attributes

- const bool **existed_before**
Flag indicates if the environment variable existed before constructor.
- const std::string **variable_name**
Name of environment variable.
- const std::string **original_content**
Content of environment variable before constructor executed.

5.217.1 Detailed Description

This class changes the value of an environment variable when constructed and restores the original state of the environment variable when destroyed.

Can be used for testing functionality related to environment variables.

5.217.2 Constructor & Destructor Documentation

5.217.2.1 mha_stash_environment_variable_t() mha_stash_environment_variable_t↔
::mha_stash_environment_variable_t (
 const std::string & *variable_name*,
 const std::string & *new_content*) [inline]

5.217.2.2 ~mha_stash_environment_variable_t() mha_stash_environment_variable_t↔
::~~mha_stash_environment_variable_t () [inline]

5.217.3 Member Data Documentation

5.217.3.1 existed_before const bool mha_stash_environment_variable_t::existed_↔
before [private]

Flag indicates if the environment variable existed before constructor.

5.217.3.2 variable_name const std::string mha_stash_environment_variable_t::variable_↔
_name [private]

Name of environment variable.

5.217.3.3 original_content const std::string mha_stash_environment_variable_t↔
::original_content [private]

Content of environment variable before constructor executed.

The documentation for this class was generated from the following file:

- **mha_os.h**

5.218 MHA_TCP::Async_Notify Class Reference

Portable Multiplexable cross-thread notification.

Inheritance diagram for MHA_TCP::Async_Notify:

Public Member Functions

- **Async_Notify** ()
- virtual void **reset** ()
- virtual void **set** ()
- virtual **~Async_Notify** ()

Private Attributes

- int **pipe** [2]

Additional Inherited Members

5.218.1 Detailed Description

Portable Multiplexable cross-thread notification.

5.218.2 Constructor & Destructor Documentation

5.218.2.1 Async_Notify() Async_Notify::Async_Notify ()

5.218.2.2 ~Async_Notify() Async_Notify::~~Async_Notify () [virtual]

5.218.3 Member Function Documentation

5.218.3.1 reset() void Async_Notify::reset () [virtual]

Reimplemented from **MHA_TCP::Wakeup_Event** (p. [892](#)).

5.218.3.2 set() void Async_Notify::set () [virtual]

5.218.4 Member Data Documentation

5.218.4.1 pipe int MHA_TCP::Async_Notify::pipe[2] [private]

The documentation for this class was generated from the following files:

- **mha_tcp.cpp**

5.219 mha_tcp::buffered_socket_t Class Reference

An asio TCP socket with an associated streambuf buffer for receiving lines of text, as well as string buffers for sending responses.

Inherits socket, and enable_shared_from_this< buffered_socket_t >.

Public Member Functions

- asio::streambuf & **get_buffer** ()
Access to associated streambuf.
- void **queue_write** (const std::string &message)
Send the given message through this connection to the client asynchronously.

Private Attributes

- asio::streambuf **streambuf**
associated streambuf object to collect received pieces into lines
- std::string **current_message**
The message that is currently sent back to the client.
- std::string **next_message**
A buffer for the next message(s) that must be sent back to the client after the sending of current_message has completed.

5.219.1 Detailed Description

An asio TCP socket with an associated streambuf buffer for receiving lines of text, as well as string buffers for sending responses.

Used for communicating with MHA TCP clients. The life time of the connection objects is managed with shared pointers registered together with callbacks in the asio event loop. This is a common idiom in asio. To support this, we inherit from enable_shared_from_this which is also common in code that uses asio.

5.219.2 Member Function Documentation

5.219.2.1 get_buffer() asio::streambuf& mha_tcp::buffered_socket_t::get_buffer ()
[inline]

Access to associated streambuf.

Needed to invoke async_read.

Returns

associated streambuf object by reference

5.219.2.2 queue_write() void mha_tcp::buffered_socket_t::queue_write (
const std::string & message)

Send the given message through this connection to the client asynchronously.

Parameters

<i>message</i>	The text to send. Method copies the message before returning.
----------------	---

5.219.3 Member Data Documentation

5.219.3.1 streambuf `asio::streambuf mha_tcp::buffered_socket_t::streambuf [private]`

associated streambuf object to collect received pieces into lines

5.219.3.2 current_message `std::string mha_tcp::buffered_socket_t::current_message [private]`

The message that is currently sent back to the client.

5.219.3.3 next_message `std::string mha_tcp::buffered_socket_t::next_message [private]`

A buffer for the next message(s) that must be sent back to the client after the sending of `current_message` has completed.

The documentation for this class was generated from the following files:

- `mha_tcp_server.hh`
- `mha_tcp_server.cpp`

5.220 MHA_TCP::Client Class Reference

A portable class for a tcp client connections.

Inheritance diagram for MHA_TCP::Client:

Public Member Functions

- **Client** (const std::string &host, unsigned short port)
Constructor connects to host, port via TCP.
- **Client** (const std::string &host, unsigned short port, **Timeout_Watcher** &timeout_↔
watcher)
Constructor connects to host, port via TCP, using a timeout.

Additional Inherited Members

5.220.1 Detailed Description

A portable class for a tcp client connections.

5.220.2 Constructor & Destructor Documentation

5.220.2.1 Client() [1/2] Client::Client (
const std::string & host,
unsigned short port)

Constructor connects to host, port via TCP.

Parameters

<i>host</i>	The hostname of the TCP Server (p. 869).
<i>port</i>	The port or the TCP Server (p. 869).

5.220.2.2 Client() [2/2] Client::Client (
const std::string & host,
unsigned short port,
Timeout_Watcher & timeout_watcher)

Constructor connects to host, port via TCP, using a timeout.

Parameters

<i>host</i>	The hostname of the TCP Server (p. 869).
<i>port</i>	The port of the TCP Server (p. 869).
<i>timeout_watcher</i>	an Event watcher that implements a timeout.

The documentation for this class was generated from the following files:

- `mha_tcp.hh`
- `mha_tcp.cpp`

5.221 MHA_TCP::Connection Class Reference

Connection (p. 857) handles Communication between client and server, is used on both sides.

Inheritance diagram for MHA_TCP::Connection:

Public Member Functions

- **Socketread_Event * get_read_event ()**
- **Socketwrite_Event * get_write_event ()**
- `std::string get_peer_address ()`
Get peer's IP Address.
- `unsigned short get_peer_port ()`
Get peer's TCP port.
- **SOCKET get_fd () const**
Return the (protected) file descriptor of the connection.
- `virtual ~Connection ()`
Destructor closes the underlying file descriptor.
- `bool eof ()`

- Checks if the peer has closed the connection.*
- bool **can_read_line** (char delim='\n')
 - Checks if a full line of text has arrived by now.*
- bool **can_read_bytes** (unsigned howmany)
 - Checks if the specified ammount of data can be read.*
- std::string **read_line** (char delim='\n')
 - Reads a single line of data from the socket.*
- std::string **read_bytes** (unsigned howmany)
 - Reads the specified ammount of dat from the socket.*
- void **try_write** (const std::string &data="")
 - Adds data to the internal "outgoing" buffer, and then tries to write as much data from that buffer to the socket as possible without blocking.*
- void **write** (const std::string &data="")
 - Adds data to the internal "outgoing" buffer, and then writes that that buffer to the socket, regardless of blocking.*
- bool **needs_write** ()
 - Checks if the internal "outgoing" buffer contains data.*
- unsigned **buffered_incoming_bytes** () const
 - Returns the number of bytes in the internal "incoming" buffer.*
- unsigned **buffered_outgoing_bytes** () const
 - Returns the number of bytes in the internal "outgoing" buffer.*

Protected Member Functions

- **Connection** (**SOCKET** _fd)
 - Create a connection instance from a socket filedescriptor.*

Protected Attributes

- **SOCKET** fd
 - The file descriptor of the TCP Socket.*

Private Member Functions

- void **init_peer_data** ()
 - determine peer address and port*
- bool **can_sysread** ()
 - Determine wether at least 1 byte can be read without blocking.*
- bool **can_syswrite** ()
 - Determine wether at least 1 byte can be written without blocking.*
- std::string **sysread** (unsigned bytes)
 - Call the system's read function and try to read bytes.*
- std::string **syswrite** (const std::string &data)
 - Call the system's write function and try to write all characters in the string data.*

Private Attributes

- `std::string` **outbuf**
- `std::string` **inbuf**
- **Socketread_Event** * **read_event**
- **Socketwrite_Event** * **write_event**
- `bool` **closed**
- `struct sockaddr_in` **peer_addr**

5.221.1 Detailed Description

Connection (p. 857) handles Communication between client and server, is used on both sides.

5.221.2 Constructor & Destructor Documentation

5.221.2.1 Connection() `MHA_TCP::Connection::Connection (SOCKET _fd) [protected]`

Create a connection instance from a socket filedescriptor.

Parameters

↔ _↔ <i>fd</i>	The file descriptor of the TCP Socket. This file descriptor is closed again in the destructor.
----------------------	--

Exceptions

<i>MHA_Error</i> (p. 818)	If the file descriptor is < 0.
----------------------------------	--------------------------------

5.221.2.2 ~Connection() `Connection::~~Connection () [virtual]`

Destructor closes the underlying file descriptor.

5.221.3 Member Function Documentation

5.221.3.1 init_peer_data() `void MHA_TCP::Connection::init_peer_data () [private]`

determine peer address and port

5.221.3.2 can_sysread() `bool Connection::can_sysread () [private]`

Determine whether at least 1 byte can be read without blocking.

5.221.3.3 can_syswrite() `bool Connection::can_syswrite () [private]`

Determine whether at least 1 byte can be written without blocking.

5.221.3.4 sysread() `std::string Connection::sysread (unsigned bytes) [private]`

Call the system's read function and try to read bytes.

This will block in a situation where `can_sysread` returns false.

Parameters

<i>bytes</i>	The desired number of characters.
--------------	-----------------------------------

Returns

The characters read from the socket. The result may have fewer characters than specified by bytes. If the result is an empty string, then the socket has been closed by the peer.

5.221.3.5 syswrite() `std::string Connection::syswrite (const std::string & data) [private]`

Call the system's write function and try to write all characters in the string data.

May write fewer characters, but will at least write one character.

Parameters

<i>data</i>	A string of characters to write to the socket.
-------------	--

Returns

The rest of the characters that have not yet been written.

5.221.3.6 `get_read_event()` `Sockread_Event * Connection::get_read_event ()`

5.221.3.7 `get_write_event()` `Sockwrite_Event * Connection::get_write_event ()`

5.221.3.8 `get_peer_address()` `std::string Connection::get_peer_address ()`

Get peer's IP Address.

5.221.3.9 `get_peer_port()` `unsigned short Connection::get_peer_port ()`

Get peer's TCP port.

5.221.3.10 `get_fd()` `SOCKET MHA_TCP::Connection::get_fd () const [inline]`

Return the (protected) file descriptor of the connection.

Will be required for SSL.

5.221.3.11 `eof()` `bool Connection::eof ()`

Checks if the peer has closed the connection.

As a side effect, this method fills the internal "incoming" buffer if it was empty and the socket is readable and not eof.

5.221.3.12 `can_read_line()` `bool Connection::can_read_line (char delim = '\n')`

Checks if a full line of text has arrived by now.

This method reads data from the socket into the internal "incoming" buffer if it can be done without blocking.

Parameters

<i>delim</i>	The line delimiter.
--------------	---------------------

Returns

true if at least one full line of text is present in the internal buffer after this method call, false otherwise.

5.221.3.13 can_read_bytes() `bool Connection::can_read_bytes (unsigned howmany)`

Checks if the specified amount of data can be read.

This method reads data from the socket into an internal "incoming" buffer if it can be done without blocking.

Parameters

<i>howmany</i>	The number of bytes that the caller wants to have checked.
----------------	--

Returns

true if at least the specified amount of data is present in the internal buffer after this method call, false otherwise

5.221.3.14 read_line() `std::string Connection::read_line (char delim = '\n')`

Reads a single line of data from the socket.

Blocks if necessary.

Parameters

<i>delim</i>	The line delimiter.
--------------	---------------------

Returns

The string of characters in this line, including the trailing delimiter. The delimiter may be missing if the last line before EOF does not have a delimiter.

5.221.3.15 read_bytes() `std::string Connection::read_bytes (unsigned howmany)`

Reads the specified amount of data from the socket.

Blocks if necessary.

Parameters

<i>howmany</i>	The number of bytes to read.
----------------	------------------------------

Returns

The string of characters read. The string may be shorter if EOF is encountered.

5.221.3.16 try_write() `void Connection::try_write (const std::string & data = "")`

Adds data to the internal "outgoing" buffer, and then tries to write as much data from that buffer to the socket as possible without blocking.

Parameters

<i>data</i>	data to send over the socket.
-------------	-------------------------------

5.221.3.17 write() `void Connection::write (const std::string & data = "")`

Adds data to the internal "outgoing" buffer, and then writes that that buffer to the socket, regardless of blocking.

Parameters

<i>data</i>	data to send over the socket.
-------------	-------------------------------

5.221.3.18 needs_write() `bool Connection::needs_write ()`

Checks if the internal "outgoing" buffer contains data.

5.221.3.19 buffered_incoming_bytes() `unsigned Connection::buffered_incoming_bytes () const`

Returns the number of bytes in the internal "incoming" buffer.

5.221.3.20 buffered_outgoing_bytes() `unsigned Connection::buffered_outgoing_bytes () const`

Returns the number of bytes in the internal "outgoing" buffer.

5.221.4 Member Data Documentation

5.221.4.1 outbuf `std::string MHA_TCP::Connection::outbuf [private]`

5.221.4.2 inbuf `std::string MHA_TCP::Connection::inbuf [private]`

5.221.4.3 read_event `Sockread_Event* MHA_TCP::Connection::read_event [private]`

5.221.4.4 write_event `Socketwrite_Event*` MHA_TCP::Connection::write_event [private]

5.221.4.5 closed `bool` MHA_TCP::Connection::closed [private]

5.221.4.6 peer_addr `struct sockaddr_in` MHA_TCP::Connection::peer_addr [private]

5.221.4.7 fd `SOCKET` MHA_TCP::Connection::fd [protected]

The file descriptor of the TCP Socket.

The documentation for this class was generated from the following files:

- `mha_tcp.hh`
- `mha_tcp.cpp`

5.222 MHA_TCP::Event_Watcher Class Reference

OS-independent event watcher, uses `select` on Unix and `WaitForMultipleObjects` on Windows.

Inheritance diagram for MHA_TCP::Event_Watcher:

Public Types

- typedef `std::set< Wakeup_Event * >` `Events`
- typedef `std::set< Wakeup_Event * >:: iterator` `iterator`

Public Member Functions

- void `observe (Wakeup_Event *event)`
Add an event to this observer.
- void `ignore (Wakeup_Event *event)`
Remove an event from this observer.
- `std::set< Wakeup_Event * > wait ()`
| Wait for some event to occur.
- virtual `~Event_Watcher ()`

Private Attributes

- `std::set< Wakeup_Event * > events`
The list of events to watch.

5.222.1 Detailed Description

OS-independent event watcher, uses `select` on Unix and `WaitForMultipleObjects` on Windows.

5.222.2 Member Typedef Documentation

5.222.2.1 Events `typedef std::set< Wakeup_Event*> MHA_TCP::Event_Watcher::↔ Events`

5.222.2.2 iterator `typedef std::set< Wakeup_Event*>:: iterator MHA_TCP::Event_↔ Watcher::iterator`

5.222.3 Constructor & Destructor Documentation

5.222.3.1 `~Event_Watcher()` `Event_Watcher::~~Event_Watcher () [virtual]`

5.222.4 Member Function Documentation

5.222.4.1 `observe()` `void Event_Watcher::observe (Wakeup_Event * event)`

Add an event to this observer.

5.222.4.2 `ignore()` `void Event_Watcher::ignore (Wakeup_Event * event)`

Remove an event from this observer.

5.222.4.3 `wait()` `std::set< Wakeup_Event * > Event_Watcher::wait ()`

\ Wait for some event to occur.

Return all events that are ready

5.222.5 Member Data Documentation

5.222.5.1 events `std::set< Wakeup_Event*> MHA_TCP::Event_Watcher::events [private]`

The list of events to watch.

The documentation for this class was generated from the following files:

- `mha_tcp.hh`
- `mha_tcp.cpp`

5.223 MHA_TCP::OS_EVENT_TYPE Struct Reference

Public Types

- enum { **R** =0, **W** =1, **X** =2, **T** }

Public Attributes

- enum MHA_TCP::OS_EVENT_TYPE:: { ... } **mode**
- union {
 - int **fd**
 - double **timeout**
- };

5.223.1 Member Enumeration Documentation

5.223.1.1 anonymous enum `anonymous enum`

5.224 MHA_TCP::Server Class Reference

Public Member Functions

- **Server** (unsigned short **port**=0, const std::string & **iface**="0.0.0.0")
Create a TCP server socket.
- **Server** (const std::string & **iface**, unsigned short **port**=0)
Create a TCP server socket.
- **~Server** ()
Close the TCP server socket.
- std::string **get_interface** () const
Get the name given in the constructor for the network interface.
- unsigned short **get_port** () const
Get the port that the TCP server socket currently listens to.
- **Socketaccept_Event** * **get_accept_event** ()
*Produces an event that can be observed by an **Event_Watcher** (p. 865).*
- **Connection** * **accept** ()
Accept an incoming connection.
- **Connection** * **try_accept** ()
Accept an incoming connection if it can be done without blocking.

Private Member Functions

- void **initialize** (const std::string & **iface**, unsigned short **port**)

Private Attributes

- sockaddr_in **sock_addr**
- **SOCKET** **serversocket**
- std::string **iface**
- unsigned short **port**
- **Sockaccept_Event** * **accept_event**

5.224.1 Constructor & Destructor Documentation

5.224.1.1 Server() [1/2] `Server::Server (`
`unsigned short port = 0,`
`const std::string & iface = "0.0.0.0")`

Create a TCP server socket.

Parameters

<i>port</i>	The TCP port to listen to.
<i>iface</i>	The network interface to bind to.

5.224.1.2 Server() [2/2] `Server::Server (`
`const std::string & iface,`
`unsigned short port = 0)`

Create a TCP server socket.

Parameters

<i>port</i>	The TCP port to listen to.
<i>iface</i>	The network interface to bind to.

5.224.1.3 `~Server()` `Server::~~Server ()`

Close the TCP server socket.

5.224.2 Member Function Documentation

5.224.2.1 `initialize()` `void Server::initialize (` `const std::string & iface,` `unsigned short port) [private]`

5.224.2.2 `get_interface()` `std::string Server::get_interface () const`

Get the name given in the constructor for the network interface.

5.224.2.3 `get_port()` `unsigned short Server::get_port () const`

Get the port that the TCP server socket currently listens to.

5.224.2.4 `get_accept_event()` `Sockaccept_Event * Server::get_accept_event ()`

Produces an event that can be observed by an **Event_Watcher** (p. 865).

This event signals incoming connections that can be accepted.

5.224.2.5 `accept()` `Connection * Server::accept ()`

Accept an incoming connection.

blocks if necessary.

Returns

The new TCP connection. The connection has to be deleted by the caller.

5.224.2.6 try_accept() `Connection * Server::try_accept ()`

Accept an incoming connection if it can be done without blocking.

Returns

The new TCP connection or 0 if there is no immediate connection. The connection has to be deleted by the caller.

5.224.3 Member Data Documentation**5.224.3.1 sock_addr** `sockaddr_in MHA_TCP::Server::sock_addr [private]`**5.224.3.2 serversocket** `SOCKET MHA_TCP::Server::serversocket [private]`**5.224.3.3 iface** `std::string MHA_TCP::Server::iface [private]`**5.224.3.4 port** `unsigned short MHA_TCP::Server::port [private]`**5.224.3.5 accept_event** `Sockaccept_Event* MHA_TCP::Server::accept_event [private]`

5.225 mha_tcp::server_t Class Reference

Class for accepting TCP connections from clients.

Inheritance diagram for mha_tcp::server_t:

Public Member Functions

- **server_t** (const std::string &interface, uint16_t port)
Allocates a TCP server.
- uint16_t **get_port** () const
- asio::ip::tcp::endpoint **get_endpoint** () const
- asio::ip::address **get_address** () const
- size_t **get_num_accepted_connections** () const
- void **run** ()
Accepts connections on the TCP port and serves them.
- virtual bool **on_received_line** (std::shared_ptr< **buffered_socket_t** > c, const std::string &l)
This method is invoked when a line of text is received on one of the accepted connections.
- virtual void **shutdown** ()
*Shuts down the server: Close the acceptor (no new connections), shuts down the receiving direction of all accepted connections (no new commands, but responses can still be finished), registers a timer event that will cause event loop termination and return from the **run()** (p. 876) method 1 second in the future, giving us reasonably enough time for the pending responses to be sent out.*
- virtual ~**server_t** ()=default
Make destructor virtual.
- asio::io_context & **get_context** ()

Private Member Functions

- void **trigger_accept** ()
Triggers the acceptance of the next connection.
- void **post_trigger_read_line** (std::shared_ptr< **buffered_socket_t** > c)
Call `trigger_read_line` with a single detour through asio's event loop to avoid starving other connections when one connection floods us.
- void **trigger_read_line** (std::shared_ptr< **buffered_socket_t** > c)
Triggers the reading of the next line from a connection.
- void **add_connection** (std::shared_ptr< **buffered_socket_t** > connection)
Add new connection to the list of connections, retire stale pointers.

Private Attributes

- asio::io_context **io_context**
The io context used to run event loops.
- std::shared_ptr< asio::ip::tcp::acceptor > **acceptor**
The underlying asio object used to accept incoming TCP connections.
- bool **async_accept_has_been_triggered** = false
Set to true when `async_acceptance` is triggered in `trigger_accept` (Only one accept can be in process at any time).
- size_t **num_accepted_connections** = 0U
Number of accepted connections (not necessarily still existing)
- std::vector< std::weak_ptr< **buffered_socket_t** > > **connections**
Weak pointers to the existing connections.

5.225.1 Detailed Description

Class for accepting TCP connections from clients.

5.225.2 Constructor & Destructor Documentation

5.225.2.1 server_t() mha_tcp::server_t::server_t (
const std::string & interface,
uint16_t port)

Allocates a TCP server.

Parameters

<i>interface</i>	Host name of the network interface to listen on. Can be "localhost" or "127.0.0.1" for localhost, "0.0.0.0" for any ipv4 interface, ...
<i>port</i>	TCP port to open for incoming connections. If port==0, then the operating system will select a free port.

Exceptions

<i>system_error</i>	if the name given in interface cannot be resolved
<i>system_error</i>	if we cannot bind to the requested interface

5.225.2.2 `~server_t()` `virtual mha_tcp::server_t::~~server_t () [virtual], [default]`

Make destructor virtual.

5.225.3 Member Function Documentation

5.225.3.1 `get_port()` `uint16_t mha_tcp::server_t::get_port () const`

Returns

The port number of the TCP port that has been opened. If the port specified in the constructor was 0, this will return the port that the operating system has selected.

5.225.3.2 `get_endpoint()` `asio::ip::tcp::endpoint mha_tcp::server_t::get_endpoint () const`

Returns

The local endpoint of the acceptor.

5.225.3.3 get_address() asio::ip::address mha_tcp::server_t::get_address () const

Returns

The ip adress that the server is bound to.

5.225.3.4 get_num_accepted_connections() size_t mha_tcp::server_t::get_num_accepted_connections () const

Returns

the number of TCP connections that have been accepted

5.225.3.5 run() void mha_tcp::server_t::run ()

Accepts connections on the TCP port and serves them.

Triggers the acceptance of the next connection to start things off.

5.225.3.6 on_received_line() bool mha_tcp::server_t::on_received_line (
 std::shared_ptr< buffered_socket_t > c,
 const std::string & l) [virtual]

This method is invoked when a line of text is received on one of the accepted connections.

Override this method to process the communication with the client.

Parameters

<i>c</i>	the connection that has received this line
<i>l</i>	the line that has been received, without the line ending

Returns

client should return true when client wants to read another line of text, else false.

Reimplemented in `mhaserver_t::tcp_server_t` (p. 1245).

5.225.3.7 shutdown() `void mha_tcp::server_t::shutdown () [virtual]`

Shuts down the server: Close the acceptor (no new connections), shuts down the receiving direction of all accepted connections (no new commands, but responses can still be finished), registers a timer event that will cause event loop termination and return from the `run()` (p. 876) method 1 second in the future, giving us reasonably enough time for the pending responses to be sent out.

5.225.3.8 get_context() `asio::io_context & mha_tcp::server_t::get_context ()`

Returns

the asio io context used to run the event loop

5.225.3.9 trigger_accept() `void mha_tcp::server_t::trigger_accept () [private]`

Triggers the acceptance of the next connection.

Called from `run` to accept the first connection and from the accept handler to accept each next connection. Once a connection from a client is accepted, the accept handler will register it with the event loop for receiving a line of text.

5.225.3.10 post_trigger_read_line() `void mha_tcp::server_t::post_trigger_read_line ((std::shared_ptr< buffered_socket_t > c) [private]`

Call `trigger_read_line` with a single detour through asio's event loop to avoid starving other connections when one connection floods us.

5.225.3.11 trigger_read_line() `void mha_tcp::server_t::trigger_read_line (std::shared_ptr< buffered_socket_t > c) [private]`

Triggers the reading of the next line from a connection.

Parameters

c	The connection where the incoming data is expected from.
----------	--

5.225.3.12 add_connection() `void mha_tcp::server_t::add_connection (std::shared_ptr< buffered_socket_t > connection) [inline], [private]`

Add new connection to the list of connections, retire stale pointers.

5.225.4 Member Data Documentation

5.225.4.1 io_context `asio::io_context mha_tcp::server_t::io_context [private]`

The io context used to run event loops.

5.225.4.2 acceptor `std::shared_ptr<asio::ip::tcp::acceptor> mha_tcp::server_t::acceptor [private]`

The underlying asio object used to accept incoming TCP connections.

5.225.4.3 async_accept_has_been_triggered `bool mha_tcp::server_t::async_accept_has_been_triggered = false [private]`

Set to true when `async_acceptance` is triggered in `trigger_accept` (Only one accept can be in process at any time).

5.225.4.4 num_accepted_connections `size_t mha_tcp::server_t::num_accepted_connections = 0U [private]`

Number of accepted connections (not necessarily still existing)

5.225.4.5 connections `std::vector<std::weak_ptr< buffered_socket_t > > mha_tcp↔
::server_t::connections [private]`

Weak pointers to the existing connections.

Needed to shutdown the active connections for incoming data when server shuts down.

5.230 MHA_TCP::Thread Class Reference

A very simple class for portable threads.

Public Types

- enum { **PREPARED**, **RUNNING**, **FINISHED** }
The current state of the thread.
- typedef void (*)(**thr_f**) (void *)
The thread function signature to use with this class.

Public Member Functions

- **Thread** (**thr_f** func, void * **arg**=0)
Constructor starts a new thread.
- virtual ~**Thread** ()
*The destructor should only be called when the **Thread** (p. 882) is finished.*
- virtual void **run** ()
*The internal method that delegated the new thread to the registered **Thread** (p. 882) function.*

Public Attributes

- **Async_Notify_thread_finish_event**
Event will be triggered when the thread exits.
- enum MHA_TCP::Thread:: { ... } **state**
The current state of the thread.
- **thr_f thread_func**
The thread function that the client has registered.
- void * **thread_arg**
The argument that the client wants to be handed through to the thread function.
- **MHA_Error * error**
*The **MHA_Error** (p. 818) that caused the thread to abort, if any.*

Protected Member Functions

- **Thread ()**
Default constructor may only be used by derived classes that want to start the thread themselves.

Protected Attributes

- void * **arg**
The argument for the client's thread function.
- void * **return_value**
The return value from the client's thread function is stored here When that function returns.

Private Attributes

- pthread_t **thread_handle**
The posix thread handle.
- pthread_attr_t **thread_attr**
The posix thread attribute structure.

5.230.1 Detailed Description

A very simple class for portable threads.

5.230.2 Member Typedef Documentation

5.230.2.1 **thr_f** `typedef void*(* MHA_TCP::Thread::thr_f) (void *)`

The thread function signature to use with this class.

Derive from this class and call protected standard constructor to start threads differently.

5.230.3 Member Enumeration Documentation

5.230.3.1 **anonymous enum** `anonymous enum`

The current state of the thread.

Enumerator

PREPARED	
RUNNING	
FINISHED	

5.230.4 Constructor & Destructor Documentation

5.230.4.1 **Thread()** [1/2] `MHA_TCP::Thread::Thread () [protected]`

Default constructor may only be used by derived classes that want to start the thread themselves.

5.230.4.2 **Thread()** [2/2] `Thread::Thread (Thread::thr_f func, void * arg = 0)`

Constructor starts a new thread.

Parameters

<i>func</i>	The function to be executed by the thread.
<i>arg</i>	The argument given to pass to the thread function.

5.230.4.3 `~Thread()` `Thread::~~Thread () [virtual]`

The destructor should only be called when the **Thread** (p. 882) is finished.

There is preliminary support for forceful thread cancellation in the destructor, but probably not very robust or portable..

5.230.5 Member Function Documentation

5.230.5.1 `run()` `void Thread::run () [virtual]`

The internal method that delegated the new thread to the registered **Thread** (p. 882) function.

5.230.6 Member Data Documentation

5.230.6.1 `thread_handle` `pthread_t MHA_TCP::Thread::thread_handle [private]`

The posix thread handle.

5.230.6.2 `thread_attr` `pthread_attr_t MHA_TCP::Thread::thread_attr [private]`

The posix thread attribute structure.

Required for starting a thread in detached state. Detachment is required to eliminate the need for joining this thread.

5.230.6.3 arg `void* MHA_TCP::Thread::arg [protected]`

The argument for the client's thread function.

5.230.6.4 return_value `void* MHA_TCP::Thread::return_value [protected]`

The return value from the client's thread function is stored here When that function returns.

5.230.6.5 thread_finish_event `Async_Notify MHA_TCP::Thread::thread_finish_event`

Event will be triggered when the thread exits.

5.230.6.6 state `enum { ... } MHA_TCP::Thread::state`

The current state of the thread.

5.230.6.7 thread_func `thr_f MHA_TCP::Thread::thread_func`

The thread function that the client has registered.

5.230.6.8 thread_arg `void* MHA_TCP::Thread::thread_arg`

The argument that the client wants to be handed through to the thread function.

5.230.6.9 error `MHA_Error* MHA_TCP::Thread::error`

The **MHA_Error** (p. 818) that caused the thread to abort, if any.

The documentation for this class was generated from the following files:

- **mha_tcp.hh**
- **mha_tcp.cpp**

5.231 MHA_TCP::Timeout_Event Class Reference

Inheritance diagram for MHA_TCP::Timeout_Event:

Public Member Functions

- **Timeout_Event** (double interval)
- virtual **OS_EVENT_TYPE** **get_os_event** ()

Private Attributes

- double **end_time**

Additional Inherited Members

5.231.1 Constructor & Destructor Documentation

5.231.1.1 Timeout_Event() `Timeout_Event::Timeout_Event (double interval)`

5.231.2 Member Function Documentation

5.231.2.1 get_os_event() `OS_EVENT_TYPE Timeout_Event::get_os_event () [virtual]`

Reimplemented from **MHA_TCP::Wakeup_Event** (p. 892).

5.231.3 Member Data Documentation

5.231.3.1 end_time `double MHA_TCP::Timeout_Event::end_time [private]`

The documentation for this class was generated from the following files:

- **mha_tcp.hh**
- **mha_tcp.cpp**

5.232 MHA_TCP::Timeout_Watcher Class Reference

OS-independent event watcher with internal fixed-end-time timeout.

Inheritance diagram for MHA_TCP::Timeout_Watcher:

Public Member Functions

- **Timeout_Watcher** (double interval)
- virtual **~Timeout_Watcher** ()

Private Attributes

- `Timeout_Event` `timeout`

Additional Inherited Members

5.232.1 Detailed Description

OS-independent event watcher with internal fixed-end-time timeout.

5.232.2 Constructor & Destructor Documentation

5.232.2.1 Timeout_Watcher() `Timeout_Watcher::Timeout_Watcher (double interval) [explicit]`

5.232.2.2 ~Timeout_Watcher() `Timeout_Watcher::~~Timeout_Watcher () [virtual]`

5.232.3 Member Data Documentation

5.232.3.1 timeout `Timeout_Event` `MHA_TCP::Timeout_Watcher::timeout [private]`

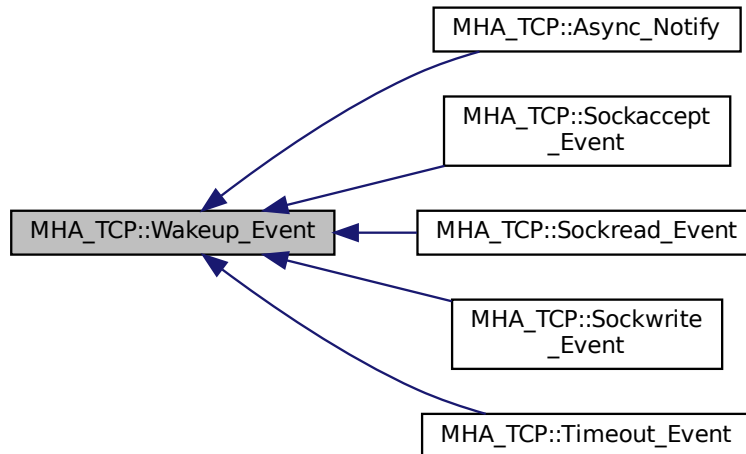

The documentation for this class was generated from the following files:

- `mha_tcp.hh`
- `mha_tcp.cpp`

5.233 MHA_TCP::Wakeup_Event Class Reference

A base class for asynchronous wakeup events.

Inheritance diagram for MHA_TCP::Wakeup_Event:

Public Member Functions

- **Wakeup_Event ()**
Event Constructor.
- virtual void **observed_by** (**Event_Watcher** *observer)
*Called by the **Event_Watcher** (p. 865) when this event is added to its list of observed events.*
- virtual void **ignored_by** (**Event_Watcher** *observer)
*Called by the **Event_Watcher** (p. 865) when this event is removed from its list of observed events.*
- virtual **~Wakeup_Event ()**
Destructor deregisters from observers.
- virtual **OS_EVENT_TYPE** **get_os_event** ()
Get necessary information for the Event Watcher.
- virtual void **reset** ()
For pure notification events, reset the "signalled" status.
- virtual bool **status** ()
Query whether the event is in signalled state now.

Protected Attributes

- **OS_EVENT_TYPE** **os_event**
- bool **os_event_valid**

Private Attributes

- **std::set< class Event_Watcher * > observers**

*A list of all **Event_Watcher** (p. 865) instances that this **Wakeup_Event** (p. 890) is observed by (stored here for proper deregistering).*

5.233.1 Detailed Description

A base class for asynchronous wakeup events.

5.233.2 Constructor & Destructor Documentation

5.233.2.1 **Wakeup_Event()** `Wakeup_Event::Wakeup_Event ()`

Event Constructor.

The new event has invalid state.

5.233.2.2 **~Wakeup_Event()** `Wakeup_Event::~~Wakeup_Event () [virtual]`

Destructor deregisters from observers.

5.233.3 Member Function Documentation

5.233.3.1 **observed_by()** `void Wakeup_Event::observed_by (Event_Watcher * observer) [virtual]`

Called by the **Event_Watcher** (p. 865) when this event is added to its list of observed events.

5.233.3.2 ignored_by() `void Wakeup_Event::ignored_by (
 Event_Watcher * observer) [virtual]`

Called by the **Event_Watcher** (p. 865) when this event is removed from its list of observed events.

5.233.3.3 get_os_event() `OS_EVENT_TYPE Wakeup_Event::get_os_event () [virtual]`

Get necessary information for the Event Watcher.

Reimplemented in **MHA_TCP::Timeout_Event** (p. 887).

5.233.3.4 reset() `void Wakeup_Event::reset () [virtual]`

For pure notification events, reset the "signalled" status.

Reimplemented in **MHA_TCP::Async_Notify** (p. 853).

5.233.3.5 status() `bool Wakeup_Event::status () [virtual]`

Query whether the event is in signalled state now.

5.233.4 Member Data Documentation

5.233.4.1 observers `std::set<class Event_Watcher *> MHA_TCP::Wakeup_Event↔
 ::observers [private]`

A list of all **Event_Watcher** (p. 865) instances that this **Wakeup_Event** (p. 890) is observed by (stored here for proper deregistering).

5.233.4.2 os_event `OS_EVENT_TYPE MHA_TCP::Wakeup_Event::os_event` [protected]

5.233.4.3 os_event_valid `bool MHA_TCP::Wakeup_Event::os_event_valid` [protected]

The documentation for this class was generated from the following files:

- `mha_tcp.hh`
- `mha_tcp.cpp`

5.234 mha_tictoc_t Struct Reference

Public Attributes

- struct timeval **tv1**
- struct timeval **tv2**
- struct timezone **tz**
- float **t**

5.234.1 Member Data Documentation

5.234.1.1 tv1 `struct timeval mha_tictoc_t::tv1`

5.234.1.2 tv2 `struct timeval mha_tictoc_t::tv2`

5.234.1.3 tz `struct timezone mha_tictoc_t::tz`

5.234.1.4 t float mha_tictoc_t::t

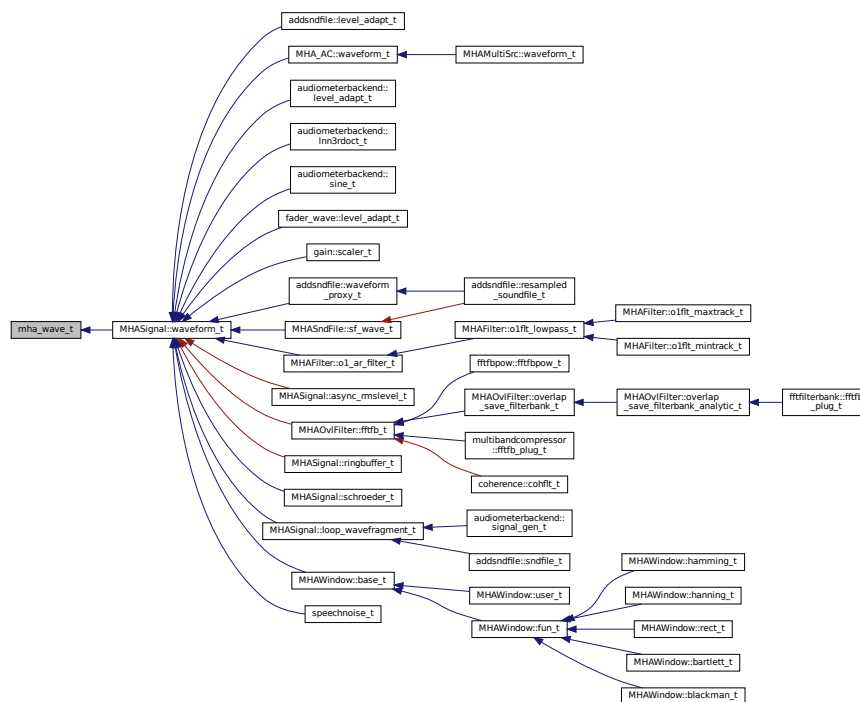

The documentation for this struct was generated from the following file:

- **mha_profiling.h**

5.235 mha_wave_t Struct Reference

Waveform signal structure.

Inheritance diagram for mha_wave_t:

Public Attributes

- **mha_real_t * buf**
signal buffer
- unsigned int **num_channels**
number of channels
- unsigned int **num_frames**
number of frames in each channel
- **mha_channel_info_t * channel_info**
detailed channel description

5.235.1 Detailed Description

Waveform signal structure.

This structure contains one fragment of a waveform signal. The member `num_frames` describes the number of audio samples in each audio channel.

In a calibrated openMHA, audio samples are stored in unit Pascal, see **Central Calibration** (p. 3).

The field `channel_info` must be an array of `num_channels` entries or NULL.

5.235.2 Member Data Documentation

5.235.2.1 `buf` `mha_real_t*` `mha_wave_t::buf`

signal buffer

5.235.2.2 `num_channels` `unsigned int` `mha_wave_t::num_channels`

number of channels

5.235.2.3 `num_frames` `unsigned int` `mha_wave_t::num_frames`

number of frames in each channel

5.235.2.4 `channel_info` `mha_channel_info_t*` `mha_wave_t::channel_info`

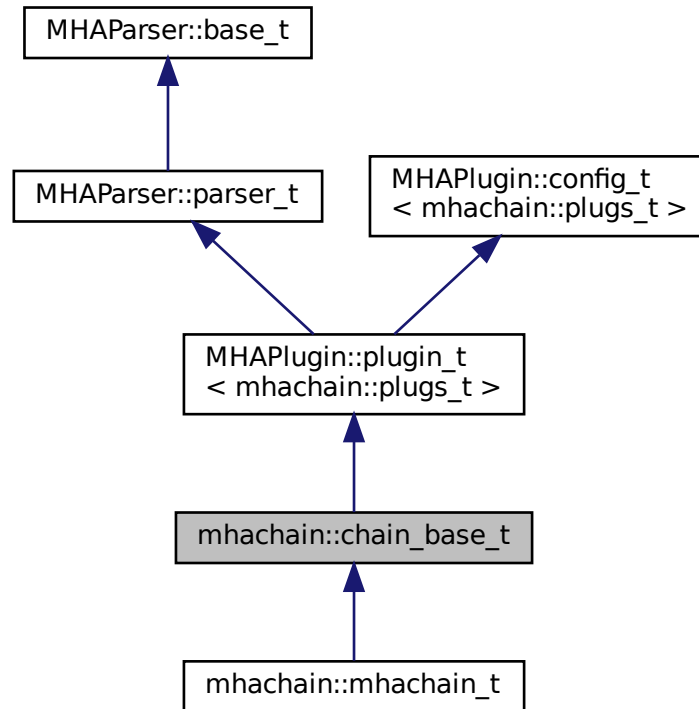

detailed channel description

The documentation for this struct was generated from the following file:

- `mha.hh`

5.236 mhachain::chain_base_t Class Reference

Inheritance diagram for mhachain::chain_base_t:

5.239 mhaconfig_t Struct Reference

MHA prepare configuration structure.

Inheritance diagram for `mhaconfig_t`:

Public Attributes

- unsigned int **channels**
Number of audio channels.
- unsigned int **domain**
Signal domain (MHA_WAVEFORM or MHA_SPECTRUM)
- unsigned int **fragsize**
Fragment size of waveform data.
- unsigned int **wndlen**
Window length of spectral data.
- unsigned int **ftlen**
FFT length of spectral data.
- **mha_real_t srate**
Sampling rate in Hz.

5.239.1 Detailed Description

MHA prepare configuration structure.

This structure contains information about channel number and domain for input and output signals of a openMHA Plugin. Each plugin can change any of these parameters, e.g. by resampling of the signal. The only limitation is that the callback frequency is fixed (except for the plugins `db` and `dbasync`).

5.239.2 Member Data Documentation

5.239.2.1 **channels** `unsigned int mhaconfig_t::channels`

Number of audio channels.

5.239.2.2 **domain** `unsigned int mhaconfig_t::domain`

Signal domain (MHA_WAVEFORM or MHA_SPECTRUM)

5.239.2.3 fragsize unsigned int mhaconfig_t::fragsize

Fragment size of waveform data.

5.239.2.4 wndlen unsigned int mhaconfig_t::wndlen

Window length of spectral data.

5.239.2.5 fftlen unsigned int mhaconfig_t::fftlen

FFT length of spectral data.

5.239.2.6 srate mha_real_t mhaconfig_t::srate

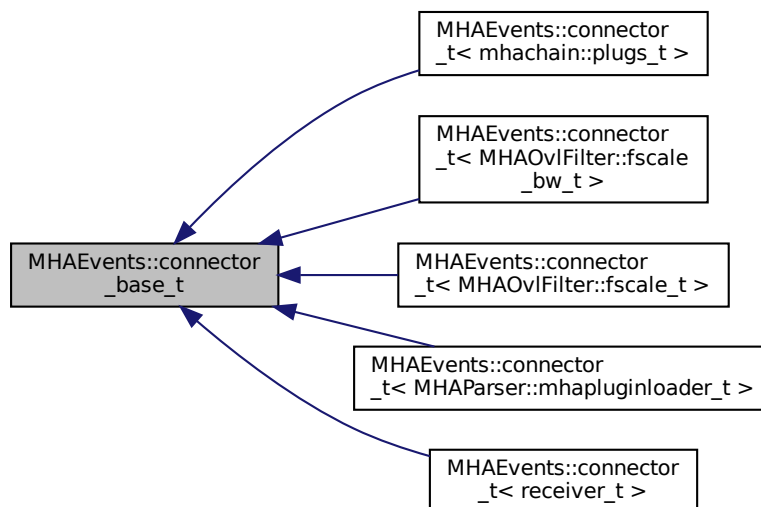

Sampling rate in Hz.

5.243 MHAEvents::patchbay_t< receiver_t > Class Template Reference

Patchbay which connects any event emitter with any member function of the parameter class.

Public Member Functions

- `~patchbay_t ()`
- `void connect (emitter_t *, receiver_t *, void(receiver_t::*)())`
Connect a receiver member function void (receiver_t::)() with an event emitter.*
- `void connect (emitter_t *, receiver_t *, void(receiver_t::*)(const std::string &))`
Connect a receiver member function void (receiver_t::)(const std::string&) with an event emitter.*
- `void connect (emitter_t *, receiver_t *, void(receiver_t::*)(const std::string &, unsigned int, unsigned int))`

Private Attributes

- `std::list< connector_t< receiver_t > * > cons`

5.243.1 Detailed Description

```
template<class receiver_t>
class MHAEvents::patchbay_t< receiver_t >
```

Patchbay which connects any event emitter with any member function of the parameter class.

The connections created by the `connect()` (p. 916) function are hold until the destructor is called. To avoid access to invalid function pointers, it is required to destruct the patchbay before the receiver, usually by declaring the patchbay as a member of the receiver.

The receiver can be any class or structure; the event callback can be either a member function without arguments or with `const std::string&` argument.

5.243.2 Constructor & Destructor Documentation

5.243.2.1 `~patchbay_t()` `template<class receiver_t >`
`MHAEvents::patchbay_t< receiver_t >::~~ patchbay_t`

5.243.3 Member Function Documentation

5.243.3.1 `connect()` [1/3] `template<class receiver_t >`
`void MHAEvents::patchbay_t< receiver_t >::connect (`
`emitter_t * e,`
`receiver_t * r,`
`void(receiver_t::*) () rfun)`

Connect a receiver member function `void (receiver_t::*)()` with an event emitter.

Create a connection.

The connection is removed when the patchbay is destructed.

Parameters

<i>e</i>	Pointer to an event emitter
<i>r</i>	Pointer to the receiver
<i>rfun</i>	Pointer to a member function of the receiver class

5.243.3.2 `connect()` [2/3] `template<class receiver_t >`
`void MHAEvents::patchbay_t< receiver_t >::connect (`
`emitter_t * e,`
`receiver_t * r,`
`void(receiver_t::*)(const std::string &) rfun)`

Connect a receiver member function `void (receiver_t::*)(const std::string&)` with an event emitter.

Create a connection.

The connection is removed when the patchbay is destructed.

Parameters

<i>e</i>	Pointer to an event emitter
<i>r</i>	Pointer to the receiver
<i>rfun</i>	Pointer to a member function of the receiver class

```

5.243.3.3 connect() [3/3] template<class receiver_t >
void MHAEvents::patchbay_t< receiver_t >::connect (
    emitter_t * e,
    receiver_t * r,
    void(receiver_t::*)(const std::string &, unsigned int, unsigned int)
    rfun )

```

5.247 MHAFilter::blockprocessing_polyphase_resampling_t Class Reference

A class that does polyphase resampling and takes into account block processing.

Public Member Functions

- **blockprocessing_polyphase_resampling_t** (float source_srate, unsigned source_fragsize, float target_srate, unsigned target_fragsize, float nyquist_ratio, float irslen, unsigned nchannels, bool add_delay)
Constructs a polyphase resampling filter that can be used for blockprocessing with the given parameters.
- virtual **~blockprocessing_polyphase_resampling_t** ()
- void **write** (**mha_wave_t** &signal)
Write signal to the ringbuffer.
- void **read** (**mha_wave_t** &signal)
Read resampled signal.
- bool **can_read** () const
Checks if the resampling ring buffer can produce another output signal block.

Private Attributes

- **polyphase_resampling_t * resampling**
- unsigned **fragsize_in**
- unsigned **fragsize_out**
- unsigned **num_channels**

5.247.1 Detailed Description

A class that does polyphase resampling and takes into account block processing.

5.247.2 Constructor & Destructor Documentation

5.247.2.1 **blockprocessing_polyphase_resampling_t**(MHAFilter::blockprocessing_↔

```
polyphase_resampling_t::blockprocessing_polyphase_resampling_t (
    float source_srate,
    unsigned source_fragsize,
    float target_srate,
    unsigned target_fragsize,
    float nyquist_ratio,
    float irslen,
    unsigned nchannels,
    bool add_delay )
```

Constructs a polyphase resampling filter that can be used for blockprocessing with the given parameters.

Parameters

<i>source_srate</i>	Source sampling rate / Hz
<i>source_fragsize</i>	Fragment size of incoming audio blocks / frames at <i>source_srate</i>
<i>target_srate</i>	Target sampling rate / Hz
<i>target_fragsize</i>	Fragment size of produced audio blocks / frames at <i>target_srate</i>
<i>nyquist_ratio</i>	Low pass filter cutoff frequency relative to the nyquist frequency of the smaller of the two sampling rates. Example values: 0.8, 0.9
<i>irslen</i>	Impulse response length used for low pass filtering / s
<i>nchannels</i>	Number of audio channels
<i>add_delay</i>	To avoid underruns, a delay is generally necessary for round trip block size adaptations. It is only necessary to add this delay to one of the two resampling chains. Set this parameter to true for the first resampling object of a round trip pair. It will add the necessary delay, and calculate the size of the ring buffer appropriately, When set to false, only the ringbuffer size will be set sufficiently.

5.247.2.2 `~blockprocessing_polyphase_resampling_t()` `virtual MHAFilter::blockprocessing↔
_polyphase_resampling_t::~~blockprocessing_polyphase_resampling_t () [inline],
[virtual]`

5.247.3 Member Function Documentation

5.247.3.1 `write()` `void MHAFilter::blockprocessing_polyphase_resampling_t::write (
mha_wave_t & signal)`

Write signal to the ringbuffer.

Parameters

<i>signal</i>	input signal in original sampling rate
---------------	--

Exceptions

<i>MHA_Error</i> (p. 818)	Raises exception if there is not enough room, if the number of channels does not match, or if the number of frames is not equal to the number specified in the constructor
----------------------------------	--

5.247.3.2 read() void MHAFilter::blockprocessing_polyphase_resampling_t::read (mha_wave_t & signal)

Read resampled signal.

Will perform the resampling and remove no longer needed samples from the input buffer.

Parameters

<i>signal</i>	buffer to write the resampled signal to.
---------------	--

Exceptions

MHA_Error (p. 818)	Raises exception if there is not enough input signal, if the number of channels of frames does not match.
---------------------------	---

5.247.3.3 can_read() bool MHAFilter::blockprocessing_polyphase_resampling_t::can_read () const [inline]

Checks if the resampling ring buffer can produce another output signal block.

5.250.1 Detailed Description

FFT based FIR filter implementation.

The maximal number of coefficients can be FFT length - fragsize + 1.

5.250.2 Constructor & Destructor Documentation

5.250.2.1 `fftfilter_t()` `MHAFilter::fftfilter_t::fftfilter_t (`
 unsigned int *fragsize*,
 unsigned int *channels*,
 unsigned int *fftlen*)

Constructor.

Parameters

<i>fragsize</i>	Number of frames expected in input signal (each cycle).
<i>channels</i>	Number of channels expected in input signal.
<i>fftlen</i>	FFT length of filter.

5.250.2.2 `~fftfilter_t()` `MHAFilter::fftfilter_t::~~fftfilter_t ()`

5.250.3 Member Function Documentation

5.250.3.1 update_coefs() `void MHAFilter::fftfilter_t::update_coefs (`
`const mha_wave_t * pwIRS)`

Update the set of coefficients.

Parameters

<i>pwIRS</i>	Coefficients structure
--------------	------------------------

Note

The number of channels in *h* must match the number of channels given in the constructor. The filter length is limited to `ffflen-framesize+1` (longer IRS will be shortened).

5.250.3.2 filter() [1/3] `void MHAFilter::fftfilter_t::filter (`
`const mha_wave_t * pwIn,`
`mha_wave_t ** ppwOut,`
`const mha_wave_t * pwIRS)`

Apply filter with changing coefficients to a waveform fragment.

Parameters

<i>pw↔ In</i>	Input signal pointer.
-------------------	-----------------------

Return values

<i>ppwOut</i>	Pointer to output signal pointer, will be set to a valid signal.
---------------	--

Parameters

<i>pwIRS</i>	Pointer to FIR coefficients structure.
--------------	--

5.250.3.3 filter() [2/3] `void MHAFilter::fftfilter_t::filter (`
`const mha_wave_t * pwIn,`
`mha_wave_t ** ppwOut)`

Apply filter to waveform fragment, without changing the coefficients.

Parameters

<i>pw</i> ↔ <i>In</i>	Input signal pointer.
--------------------------	-----------------------

Return values

<i>ppwOut</i>	Pointer to output signal pointer, will be set to a valid signal
---------------	---

5.250.3.4 filter() [3/3] `void MHAFilter::fftfilter_t::filter (`
`const mha_wave_t * pwIn,`
`mha_wave_t ** ppwOut,`
`const mha_spec_t * psWeights)`

Apply filter with changing coefficients to a waveform fragment.

Parameters

<i>pw</i> ↔ <i>In</i>	Input signal pointer.
--------------------------	-----------------------

Return values

<i>ppwOut</i>	Pointer to output signal pointer, will be set to a valid signal.
---------------	--

Parameters

<i>psWeights</i>	Pointer to filter weights structure.
------------------	--------------------------------------

5.251.1 Detailed Description

FFT based FIR filterbank implementation.

This class convolves n input channels with m filter coefficient sets and returns n*m output channels.

The maximal number of coefficients can be FFT length - fragsize + 1.

5.251.2 Constructor & Destructor Documentation

5.251.2.1 `fftfilterbank_t()` `MHAFilter::fftfilterbank_t::fftfilterbank_t (`
 unsigned int *fragsize*,
 unsigned int *inputchannels*,
 unsigned int *firchannels*,
 unsigned int *ftflen*)

Constructor.

Parameters

<i>fragsize</i>	Number of frames expected in input signal (each cycle).
<i>inputchannels</i>	Number of channels expected in input signal.
<i>firchannels</i>	Number of channels expected in FIR filter coefficients (= number of bands).
<i>ftflen</i>	FFT length of filter.

The number of output channels is `inputchannels*firchannels`.

5.251.2.2 `~fftfilterbank_t()` `MHAFilter::fftfilterbank_t::~~fftfilterbank_t ()`

5.251.3 Member Function Documentation

5.251.3.1 `update_coeffs()` `void MHAFilter::fftfilterbank_t::update_coeffs (`
 const `mha_wave_t` * *h*)

Update the set of coefficients.

Parameters

<i>h</i>	Coefficients structure
----------	------------------------

Note

The number of channels in *h* must match the number of channels given in the constructor, and the number of frames can not be more than `ftflen-fragsize+1`.

5.251.3.2 filter() [1/2] `void MHAFilter::fftfilterbank_t::filter (`
`const mha_wave_t * s_in,`
`mha_wave_t ** s_out,`
`const mha_wave_t * h)`

Apply filter with changing coefficients to a waveform fragment.

Parameters

s_{\leftrightarrow} _in	Input signal pointer.
------------------------------	-----------------------

Return values

s_out	Pointer to output signal pointer, will be set to a valid signal
-------	---

Parameters

h	FIR coefficients
---	------------------

5.251.3.3 filter() [2/2] `void MHAFilter::fftfilterbank_t::filter (`
`const mha_wave_t * s_in,`
`mha_wave_t ** s_out)`

Apply filter to waveform fragment, without changing the coefficients.

Parameters

s_{\leftrightarrow} _in	Input signal pointer.
------------------------------	-----------------------

Return values

s_out	Pointer to output signal pointer, will be set to a valid signal
-------	---

5.251.3.4 get_irs() `const mha_wave_t* MHAFilter::fftfilterbank_t::get_irs () const`
`[inline]`

Return the current IRS.

5.252.1 Detailed Description

Generic IIR filter class.

This class implements a generic multichannel IIR filter. It is realized as direct form II. It can work on any float array or on **mha_wave_t** (p. 894) structs. The filter coefficients can be directly accessed.

5.252.2 Constructor & Destructor Documentation

5.252.2.1 filter_t() [1/3] MHAFilter::filter_t::filter_t (
 unsigned int *ch*,
 unsigned int *lena*,
 unsigned int *lenb*)

Constructor.

Parameters

<i>ch</i>	Number of channels
<i>lena</i>	Number of recursive coefficients
<i>lenb</i>	Number of non-recursive coefficients

5.252.2.2 filter_t() [2/3] MHAFilter::filter_t::filter_t (
 unsigned int *ch*,
 const std::vector< **mha_real_t** > & *vA*,
 const std::vector< **mha_real_t** > & *vB*)

Constructor with initialization of coefficients.

Parameters

<i>ch</i>	Number of channels.
<i>vA</i>	Recursive coefficients.
<i>vB</i>	Non-recursive coefficients.

5.252.2.3 filter_t() [3/3] `MHAFilter::filter_t::filter_t (`
`const MHAFilter::filter_t & src)`

Copy constructor.

5.252.2.4 ~filter_t() `MHAFilter::filter_t::~~filter_t ()`

5.252.3 Member Function Documentation

5.252.3.1 operator=() `filter_t& MHAFilter::filter_t::operator= (`
`const MHAFilter::filter_t &) [delete]`

Assignment operator is not implemented.

Use copy constructor instead.

5.252.3.2 filter() [1/3] `void MHAFilter::filter_t::filter (`
`mha_wave_t * out,`
`const mha_wave_t * in)`

Filter all channels in a waveform structure.

Parameters

<i>out</i>	Output signal
<i>in</i>	Input signal

5.252.3.3 filter() [2/3] `void MHAFilter::filter_t::filter (`
`mha_real_t * dest,`
`const mha_real_t * src,`
`unsigned int dframes,`
`unsigned int frame_dist,`
`unsigned int channel_dist,`
`unsigned int channel_begin,`
`unsigned int channel_end)`

Filter parts of a waveform structure.

Parameters

<i>dest</i>	Output signal.
<i>src</i>	Input signal.
<i>dframes</i>	Number of frames to be filtered.
<i>frame_dist</i>	Index distance between frames of one channel
<i>channel_dist</i>	Index distance between audio channels
<i>channel_begin</i>	Number of first channel to be processed
<i>channel_end</i>	Number of last channel to be processed

5.252.3.4 filter() [3/3] `mha_real_t MHAFilter::filter_t::filter (mha_real_t x, unsigned int ch)`

Filter one sample.

Parameters

<i>x</i>	Input value
<i>ch</i>	Channel number to use in filter state

5.252.3.5 get_len_A() `unsigned int MHAFilter::filter_t::get_len_A () const [inline]`

Return length of recursive coefficients.

5.252.3.6 get_len_B() `unsigned int MHAFilter::filter_t::get_len_B () const [inline]`

Return length of non-recursive coefficients.

5.252.4 Member Data Documentation

5.252.4.1 A `double* MHAFilter::filter_t::A`

Pointer to recursive coefficients.

5.252.4.2 B `double* MHAFilter::filter_t::B`

Pointer to non-recursive coefficients.

5.252.4.3 len_A `unsigned int MHAFilter::filter_t::len_A [private]`

5.252.4.4 len_B `unsigned int MHAFilter::filter_t::len_B [private]`

5.255.1 Detailed Description

IIR filter class wrapper for integration into parser structure.

This class implements an infinite impulse response filter. Since it inherits from **MHAParser**↔
::parser_t (p. 1149), it can easily be integrated in the openMHA configuration tree. It provides the configuration language variables "A" (vector of recursive filter coefficients) and "B" (vector of non-recursive filter coefficients).

The filter instance reacts to changes in filter coefficients through the openMHA configuration language, and uses the updated coefficients in the next invocation of the filter method.

Update of the coefficients is thread-safe and non-blocking. Simply add this subparser to your parser items and use the "filter" member function. Filter states are reset to all 0 on update.

5.255.2 Constructor & Destructor Documentation

5.255.2.1 iir_filter_t() MHAFilter::iir_filter_t::iir_filter_t (
 std::string help = "IIR **filter** structure",
 std::string def_A = "[1]",
 std::string def_B = "[1]",
 unsigned int channels = 1)

Constructor of the IIR filter.

Initialises the sub-parser structure and the memory for holding the filter's state.

Parameters

<i>help</i>	The help string for the parser that groups the configuration variables of this filter. Could be used to describe the purpose of this IIR filter.
<i>def_A</i>	The initial value of the vector of the recursive filter coefficients, represented as string.
<i>def_B</i>	The initial value of the vector of the non-recursive filter coefficients, represented as string.
<i>channels</i>	The number of independent audio channels to process with this filter. Needed to

5.255.3 Member Function Documentation

5.255.3.1 filter() [1/2] `void MHAFilter::iir_filter_t::filter (`
`mha_wave_t * y,`
`const mha_wave_t * x)`

The filter processes the audio signal.

All channels in the audio signal are processed using the same filter coefficients. Independent state is stored between calls for each audio channel.

Parameters

<i>y</i>	Pointer to output signal holder. The output signal is stored here. Has to have the same signal dimensions as the input signal <i>x</i> . In-place processing (<i>y</i> and <i>x</i> pointing to the same signal holder) is possible.
<i>x</i>	Pointer to input signal holder. Number of channels has to be the same as given to the constructor, or to the resize (p. 954) method.

5.255.3.2 filter() [2/2] `mha_real_t MHAFilter::iir_filter_t::filter (`
`mha_real_t x,`
`unsigned int ch)`

Filter a single audio sample.

Parameters

<i>x</i>	The single audio sample
<i>ch</i>	Zero-based channel index. Use and change the state of channel <i>ch</i> . <i>ch</i> has to be less than the number of channels given to the constructor or the resize (p. 954) method.

Returns

the filtered result sample.

5.255.3.3 **resize()** void MHAFilter::iir_filter_t::resize (
 unsigned int *channels*)

Change the number of channels after object creation.

Parameters

<i>channels</i>	The new number of channels. Old filter states are lost.

5.257.1 Detailed Description

First order attack-release lowpass filter.

This filter is the base of first order lowpass filter, maximum tracker and minimum tracker.

5.257.2 Constructor & Destructor Documentation

5.257.2.1 o1_ar_filter_t() MHAFilter::o1_ar_filter_t::o1_ar_filter_t (
 unsigned int *channels*,
 mha_real_t *fs* = 1.0*f*,
 std::vector< mha_real_t > *tau_a* = std::vector<float>(1,0.0*f*),
 std::vector< mha_real_t > *tau_r* = std::vector<float>(1,0.0*f*))

Constructor, setting all taus to zero.

The filter state can be accessed through the member functions of **MHAFilter::waveform_t** (p. 1310).

Parameters

<i>channels</i>	Number of independent filters
<i>fs</i>	Sampling rate (optional, default = 1)
<i>tau_a</i>	Attack time constants (optional, default = 0)
<i>tau_r</i>	Release time constants (optional, default = 0)

5.257.3 Member Function Documentation

5.257.3.1 set_tau_attack() `void MHAFilter::ol_ar_filter_t::set_tau_attack (`
 `unsigned int ch,`
 `mha_real_t tau)`

Set the attack time constant.

Parameters

<i>ch</i>	Channel number
<i>tau</i>	Time constant

5.257.3.2 set_tau_release() `void MHAFilter::ol_ar_filter_t::set_tau_release (`
 `unsigned int ch,`
 `mha_real_t tau)`

Set the release time constant.

Parameters

<i>ch</i>	Channel number
<i>tau</i>	Time constant

5.257.3.3 operator>() [1/2] `mha_real_t MHAFilter::ol_ar_filter_t::operator() (`
 `unsigned int ch,`
 `mha_real_t x) [inline]`

Apply filter to value *x*, using state channel *ch*.

Parameters

<i>ch</i>	Channel number
<i>x</i>	Input value

Returns

Output value

5.257.3.4 operator()() [2/2] `void MHAFilter::o1_ar_filter_t::operator() (const mha_wave_t & in, mha_wave_t & out) [inline]`

Apply filter to a **mha_wave_t** (p. 894) data.

Parameters

<i>in</i>	Input signal
<i>out</i>	Output signal

The number of channels must match the number of filter bands.

5.261 MHAFilter::partitioned_convolution_t Class Reference

A filter class for partitioned convolution.

Classes

- struct **index_t**
Bookkeeping class.

Public Member Functions

- **partitioned_convolution_t** (unsigned int **fragsize**, unsigned int **nchannels_in**, unsigned int **nchannels_out**, const **transfer_matrix_t** &transfer)
Create a new partitioned convolver.
- **~partitioned_convolution_t** ()
Free fftw resource allocated in constructor.
- **mha_wave_t** * **process** (const **mha_wave_t** *s_in)
processing

Public Attributes

- unsigned int **fragsize**
Audio fragment size, always equal to partition size.
- unsigned int **nchannels_in**
Number of audio input channels.
- unsigned int **nchannels_out**
Number of audio output channels.
- unsigned int **output_partitions**
The maximum number of partitions in any of the impulse responses.
- unsigned int **filter_partitions**
The total number of non-zero impulse response partitions.
- **MHASignal::waveform_t** **input_signal_wave**
Buffer for input signal.
- unsigned int **current_input_signal_buffer_half_index**
A counter modulo 2.
- **MHASignal::spectrum_t** **input_signal_spec**
Buffer for FFT transformed input signal.
- **MHASignal::spectrum_t** **frequency_response**
Buffers for frequency response spectra of impulse response partitions.
- std::vector< **index_t** > **bookkeeping**
Keeps track of input channels, output channels, impulse response partition, and delay.
- std::vector< **MHASignal::spectrum_t** > **output_signal_spec**

Buffers for FFT transformed output signal.

- unsigned int **current_output_partition_index**
A counter modulo output_partitions, indexing the "current" output partition.
- **MHASignal::waveform_t output_signal_wave**
Buffer for the wave output signal.
- **mha_fft_t fft**
The FFT transformer.

5.261.1 Detailed Description

A filter class for partitioned convolution.

Impulse responses are partitioned into sections of fragment size. Audio signal is convolved with every partition and delayed as needed. Convolution is done according to overlap-save. FFT length used is 2 times fragment size.

5.261.2 Constructor & Destructor Documentation

5.261.2.1 partitioned_convolution_t() `MHAFilter::partitioned_convolution_t::partitioned_convolution_t (unsigned int fragsize, unsigned int nchannels_in, unsigned int nchannels_out, const transfer_matrix_t & transfer)`

Create a new partitioned convolver.

Parameters

<i>fragsize</i>	Audio fragment size, equal to partition size.
<i>nchannels_in</i>	Number of input audio channels.
<i>nchannels_out</i>	Number of output audio channels.
<i>transfer</i>	A sparse matrix of impulse responses.

5.261.2.2 ~partitioned_convolution_t() `MHAFilter::partitioned_convolution_t::~~partitioned_convolution_t ()`

Free fftw resource allocated in constructor.

5.261.3 Member Function Documentation

5.261.3.1 process() `mha_wave_t * MHAFilter::partitioned_convolution_t::process (const mha_wave_t * s_in)`

processing

5.261.4 Member Data Documentation

5.261.4.1 fragsize `unsigned int MHAFilter::partitioned_convolution_t::fragsize`

Audio fragment size, always equal to partition size.

5.261.4.2 nchannels_in `unsigned int MHAFilter::partitioned_convolution_t::nchannels_in`

Number of audio input channels.

5.261.4.3 nchannels_out `unsigned int MHAFilter::partitioned_convolution_t::nchannels_out`

Number of audio output channels.

5.261.4.4 output_partitions `unsigned int MHAFilter::partitioned_convolution_t::output_partitions`

The maximum number of partitions in any of the impulse responses.

Determines the size of the delay line.

5.261.4.5 filter_partitions unsigned int MHAFilter::partitioned_convolution_t::filter_partitions

The total number of non-zero impulse response partitions.

5.261.4.6 input_signal_wave MHASignal::waveform_t MHAFilter::partitioned_convolution_t::input_signal_wave

Buffer for input signal.

Has nchannels_in channels and fragsize*2 frames

5.261.4.7 current_input_signal_buffer_half_index unsigned int MHAFilter::partitioned_convolution_t::current_input_signal_buffer_half_index

A counter modulo 2.

Indicates the buffer half in input signal wave into which to copy the current input signal.

5.261.4.8 input_signal_spec MHASignal::spectrum_t MHAFilter::partitioned_convolution_t::input_signal_spec

Buffer for FFT transformed input signal.

Has nchannels_in channels and fragsize+1 frames (fft bins).

5.261.4.9 frequency_response MHASignal::spectrum_t MHAFilter::partitioned_convolution_t::frequency_response

Buffers for frequency response spectra of impulse response partitions.

Each "channel" contains another partition of some impulse response. The bookkeeping array is used to keep track what to do with these frequency responses. This container has filter_partitions channels and fragsize+1 frames (fft bins).

5.261.4.10 bookkeeping std::vector< index_t > MHAFilter::partitioned_convolution_t::bookkeeping

Keeps track of input channels, output channels, impulse response partition, and delay.

The index into this array is the same as the "channel" index into the frequency_response array. Array has filter_partitions entries.

5.261.4.11 output_signal_spec `std::vector< MHA_Signal::spectrum_t > MHAFilter↔
::partitioned_convolution_t::output_signal_spec`

Buffers for FFT transformed output signal.

For each array member, Number of channels is equal to `nchannels_out`, number of frames (fft bins) is equal to `fragsize+1`. Array size is equal to `output_partitions`.

5.261.4.12 current_output_partition_index `unsigned int MHAFilter::partitioned_↔
convolution_t::current_output_partition_index`

A counter modulo `output_partitions`, indexing the "current" output partition.

5.261.4.13 output_signal_wave `MHA_Signal::waveform_t MHAFilter::partitioned_↔
convolution_t::output_signal_wave`

Buffer for the wave output signal.

Number of channels is equal to `nchannels_out`, number of frames is equal to `fragsize`

5.261.4.14 fft `mha_fft_t MHAFilter::partitioned_convolution_t::fft`

The FFT transformer.

The documentation for this class was generated from the following files:

- `mha_filter.hh`
- `mha_filter.cpp`

5.262 MHAFilter::partitioned_convolution_t::index_t Struct Reference

Bookkeeping class.

Public Member Functions

- **index_t** (unsigned int src, unsigned int tgt, unsigned int dly)
Data constructor.
- **index_t** ()
Default constructor for STL compatibility.

Public Attributes

- unsigned int **source_channel_index**
The input channel index to apply the current partition to.
- unsigned int **target_channel_index**
The index of the output channel to which the filter result should go.
- unsigned int **delay**
The delay (in blocks) of this partition.

5.262.1 Detailed Description

Bookkeeping class.

For each impulse response partition, keeps track of which input to filter, which output channel to filter to, and the delay in blocks. Objects of class Index should be kept in an array with the same indices as the corresponding impulse response partitions.

5.262.2 Constructor & Destructor Documentation

5.262.2.1 index_t() [1/2] `MHAFilter::partitioned_convolution_t::index_t::index_t (unsigned int src, unsigned int tgt, unsigned int dly) [inline]`

Data constructor.

Parameters

<i>src</i>	The input channel index to apply the current partition to.
<i>tgt</i>	The index of the output channel to which the filter result should go.
<i>dly</i>	The delay (in blocks) of this partition

5.262.2.2 index_t() [2/2] `MHAFilter::partitioned_convolution_t::index_t::index_t () [inline]`

Default constructor for STL compatibility.

5.262.3 Member Data Documentation

5.262.3.1 source_channel_index unsigned int MHAFilter::partitioned_convolution_t::index_t::source_channel_index

The input channel index to apply the current partition to.

5.262.3.2 target_channel_index unsigned int MHAFilter::partitioned_convolution_t::index_t::target_channel_index

The index of the output channel to which the filter result should go.

5.262.3.3 delay unsigned int MHAFilter::partitioned_convolution_t::index_t::delay

The delay (in blocks) of this partition.

The documentation for this struct was generated from the following file:

5.263 MHAFilter::polyphase_resampling_t Class Reference

A class that performs polyphase resampling.

Public Member Functions

- **polyphase_resampling_t** (unsigned n_up, unsigned n_down, **mha_real_t** nyquist_ratio, unsigned n_irs, unsigned n_ringbuffer, unsigned n_channels, unsigned n_prefill)
Construct a polyphase resampler instance.
- void **write** (**mha_wave_t** &signal)
Write signal to the ringbuffer.
- void **read** (**mha_wave_t** &signal)
Read resampled signal.
- unsigned **readable_frames** () const
Number of frames at target sampling rate that can be produced.

Private Attributes

- unsigned **upsampling_factor**
Integer upsampling factor.
- unsigned **downsampling_factor**
Integer downsampling factor.
- unsigned **now_index**
Index of "now" in the interpolated sampling rate.
- bool **underflow**
Set to true when an underflow has occurred.
- **MHAWindow::hanning_t impulse_response**
Contains the impulse response of the lowpass filter needed for anti-aliasing.
- **MHASignal::ringbuffer_t ringbuffer**
Storage of input signal.

5.263.1 Detailed Description

A class that performs polyphase resampling.

Background information: When resampling from one sampling rate to another, it helps when one sampling rate is a multiple of the other sampling rate: In the case of upsampling, the samples at the original rate are copied to the upsampled signal spread out with a constant number of zero samples between the originally adjacent samples. The signal is then low-pass filtered to avoid frequency aliasing and to fill the zero-samples with interpolated values. In the case of down-sampling, the signal is first low-pass filtered for anti-aliasing, and only every n^{th} sample of the filtered output is used for the signal at the new sample rate. Of course, for finite-impulse-response (FIR) filters this means that only every n^{th} sample needs to be computed.

When resampling from one sampling rate to another where neither is a multiple of the other, the signal first needs to be upsampled to a sampling rate that is a multiple of both (source and target) sampling rates, and then downsampled again to the target sampling rate. Instead of applying two separate lowpass filters directly after each other (one filter for upsampling and another for downsampling), it is sufficient to apply only one low-pass filter, when producing the output at the final target rate, with a cut-off frequency equal to the lower cut-off-frequency of the replaced two low-pass filters. Not filtering to produce a filtered signal already at the common multiple sampling rate has the side effect that this intermediate signal at the common multiple sampling rate keeps its filler zero samples unaltered. These zero samples can be taken advantage of when filtering to produce the output at the target rate: The zeros do not need to be multiplied with their corresponding filter coefficients, because the result is known to be zero again, and this zero product has no effect on the summation operation to compute a target sample at the target rate. To summarize, the following optimization techniques are available:

- The signal does not need to be stored in memory at the interpolation rate. It is sufficient to have the signal available at the source rate and to know where the zeros would be.
- The signal needs to be low-pass-filtered only once.

- The FIR low-pass filtering can take advantage of
 - computing only filter outputs for the required samples at the target rate,
 - skipping over zero-samples at the interpolation rate.

The procedure that takes advantage of these optimization possibilities is known as polyphase resampling.

This class implements polyphase resampling in this way for a source sampling rate and a target sampling rate that have common multiple, the interpolation sampling rate. Non-rational and drifting sample rates are outside the scope of this resampler.

5.263.2 Constructor & Destructor Documentation

5.263.2.1 polyphase_resampling_t() MHAFilter::polyphase_resampling_t::polyphase_↔

```
resampling_t (
    unsigned n_up,
    unsigned n_down,
    mha_real_t nyquist_ratio,
    unsigned n_irs,
    unsigned n_ringbuffer,
    unsigned n_channels,
    unsigned n_prefill )
```

Construct a polyphase resampler instance.

Allocates a ringbuffer with the given capacity *n_ringbuffer*. Client that triggers the constructor must ensure that the capacity *n_ringbuffer* and the delay *n_prefill* are sufficient, i.e. enough old and new samples are always available to compute sufficient samples in using an impulse response of length *n_irs*. Audio block sizes at both sides of the resampler have to be taken into account. Class `MHASignal::blockprocessing_polyphase_resampling_t` takes care of this, and it is recommended to use this class for block-based processing.

Based on *n_up*, *n_down*, *n_irs* and *nyquist_ratio*, a suitable sinc impulse response is computed and windowed with a hanning window to limit its extent.

The actual source sampling rate, target sampling rate, and interpolation sampling rate are not parameters to this constructors, because only their ratios matter.

Parameters

<i>n_up</i>	upsampling factor, ratio between interpolation rate and source rate.
<i>n_down</i>	downsampling factor, ratio between interpolation rate and target rate.
<i>nyquist_ratio</i>	low pass filter cutoff frequency relative to the nyquist frequency of the smaller of the two sampling rates. Example values: E.g. 0.8, 0.9
<i>n_irs</i>	length of impulse response (in samples at interpolation rate)

5.263.3 Member Function Documentation

5.263.3.1 write() `void MHAFilter::polyphase_resampling_t::write (mha_wave_t & signal)`

Write signal to the ringbuffer.

Signal contained in signal is appended to the audio frames already present in the ringbuffer.

Parameters

<i>signal</i>	input signal in original sampling rate
---------------	--

Exceptions

<i>MHA_Error</i> (p. 818)	Raises exception if there is not enough room or if the number of channels does not match.
----------------------------------	---

5.263.3.2 read() `void MHAFilter::polyphase_resampling_t::read (mha_wave_t & signal)`

Read resampled signal.

Will perform the resampling and remove no longer needed samples from the input buffer.

Parameters

<i>signal</i>	buffer to write the resampled signal to.
---------------	--

Exceptions

<i>MHA_Error</i> (p. 818)	Raises exception if there is not enough input signal or if the number of channels is too high.
----------------------------------	--

5.263.3.3 readable_frames() `unsigned MHAFilter::polyphase_resampling_t::readable←
_frames () const [inline]`

Number of frames at target sampling rate that can be produced.

This method only checks for enough future samples present, therefore, this number can be positive and a read operation can still fail if there are not enough past samples present to perform the filtering for the first output sample. This could only happen if the constructor parameters *n_ringbuffer* or *n_prefill* have been chosen too small, because otherwise the method **read** (p. 980) ensures that enough past samples are present to compute the next target sample.

5.263.4 Member Data Documentation

5.263.4.1 upsampling_factor `unsigned MHAFilter::polyphase_resampling_t::upsampling↔
_factor [private]`

Integer upsampling factor.

Interpolation rate divided by source rate.

5.263.4.2 downsampling_factor `unsigned MHAFilter::polyphase_resampling_t::downsampling↔
_factor [private]`

Integer downsampling factor.

Interpolation rate divided by target rate.

5.263.4.3 now_index `unsigned MHAFilter::polyphase_resampling_t::now_index [private]`

Index of "now" in the interpolated sampling rate.

5.263.4.4 underflow `bool MHAFilter::polyphase_resampling_t::underflow [private]`

Set to true when an underflow has occurred.

When this is true, then the object can no longer be used. Underflows have to be avoided by clients, e.g. by checking that enough **readable_frames** (p. 980) are present before calling **read** (p. 980)

5.263.4.5 impulse_response `MHAWindow::hanning_t` `MHAFilter::polyphase_resampling_t::impulse_response` [private]

Contains the impulse response of the lowpass filter needed for anti-aliasing.

The impulse response is stored at the interpolation sampling rate. We use an instance of `MHAWindow::hanning_t` (p. 1344) here because we are limiting the sinc impulse response with a Hanning window (otherwise the impulse response would extend indefinitely into past and future). And the samples inside an `MHAWindow::hanning_t` (p. 1344) can be altered with `*=`, which our constructor does.

5.263.4.6 ringbuffer `MHASignal::ringbuffer_t` `MHAFilter::polyphase_resampling_t::ringbuffer` [private]

Storage of input signal.

Part of the polyphase resampling optimization is that apart from the FIR impulse response, nothing is stored at the interpolation rate, saving memory and computation cycles.

The documentation for this class was generated from the following files:

- `mha_filter.hh`
- `mha_filter.cpp`

5.264 MHAFilter::resampling_filter_t Class Reference

Hann shaped low pass filter for resampling.

Private Attributes

- unsigned int **fragsize**

5.264.1 Detailed Description

Hann shaped low pass filter for resampling.

This class uses FFT filter at upsampled rate.

5.264.2 Constructor & Destructor Documentation

5.264.2.1 **resampling_filter_t()** MHAFilter::resampling_filter_t::resampling_filter_t

```
(
    unsigned int fftlen,
    unsigned int irslen,
    unsigned int channels,
    unsigned int Nup,
    unsigned int Ndown,
    double fCutOff )
```

Constructor.

Parameters

<i>fftl</i> en	FFT length.
<i>irsl</i> en	Length of filter.
<i>chann</i> els	Number of channels to be filtered.
<i>Nup</i>	Upsampling ratio.
<i>Ndown</i>	Downsampling ratio.
<i>fCutOff</i>	Cut off frequency (relative to lower Nyquist Frequency)

5.264.3 Member Function Documentation

- void **spec2fir** (const **mha_spec_t** &spec, **mha_wave_t** &fir)
Return FIR coefficients.
- **~smoothspec_t** ()

Private Member Functions

- void `internal_fir` (const `mha_spec_t` &)

Private Attributes

- unsigned int `ftlen`
- unsigned int `nchannels`
- `MHAWindow::base_t` `window`
- `MHASignal::waveform_t` `tmp_wave`
- `MHASignal::spectrum_t` `tmp_spec`
- `MHASignal::minphase_t` * `minphase`
- bool `_linphase_asym`
- `mha_fft_t` `fft`

5.265.1 Detailed Description

Smooth spectral gains, create a windowed impulse response.

Spectral gains are smoothed by multiplying the impulse response with a window function.

If a minimal phase is used, then the original phase is discarded and replaced by the minimal phase function. In this case, the window is applied to the beginning of the inverse Fourier transform of the input spectrum, and the remaining signal set to zero. If the original phase is kept, the window is applied symmetrically around zero, i.e. to the first and last samples of the inverse Fourier transform of the input spectrum. The `spec2fir()` (p. 987) function creates a causal impulse response by circularly shifting the impulse response by half of the window length.

The signal dimensions of the arguments of `smoothspec()` (p. 986) must correspond to the FFT length and number of channels provided in the constructor. The function `spec2fir()` (p. 987) can fill signal structures with more than window length frames.

5.265.2 Constructor & Destructor Documentation

5.265.2.1 `smoothspec_t()` `MHAFilter::smoothspec_t::smoothspec_t` (
 unsigned int `ftlen`,
 unsigned int `nchannels`,
 const `MHAWindow::base_t` & `window`,
 bool `minphase`,
 bool `linphase_asym` = `false`)

Constructor.

Parameters

<i>fftlen</i>	FFT length of input spectrum (fftlen/2+1 bins)
<i>nchannels</i>	Number of channels in input spectrum
<i>window</i>	Window used for smoothing
<i>minphase</i>	Use minimal phase (true) or original phase (false)
<i>linphase_asym</i>	Keep phase, but apply full window at beginning of IRS

5.265.2.2 `~smoothspec_t()` `MHAFilter::smoothspec_t::~smoothspec_t ()`

5.265.3 Member Function Documentation

5.265.3.1 `smoothspec()` [1/2] `void MHAFilter::smoothspec_t::smoothspec (`
`const mha_spec_t & s_in,`
`mha_spec_t & s_out)`

Create a smoothed spectrum.

Parameters

<i>s_{in}</i>	Input spectrum
-----------------------	----------------

Return values

<i>s_{out}</i>	Output spectrum
------------------------	-----------------

5.265.3.2 `smoothspec()` [2/2] `void MHAFilter::smoothspec_t::smoothspec (`
`mha_spec_t & spec) [inline]`

Create a smoothed spectrum (in place)

Parameters

<i>spec</i>	Spectrum to be smoothed.
-------------	--------------------------

5.265.3.3 spec2fir() `void MHAFilter::smoothspec_t::spec2fir (`
 `const mha_spec_t & spec,`
 `mha_wave_t & fir)`

Return FIR coefficients.

Parameters

<i>spec</i>	Input spectrum
-------------	----------------

Return values

<i>fir</i>	FIR coefficients, minimum length is window length
------------	---

5.265.3.4 internal_fir() `void MHAFilter::smoothspec_t::internal_fir (`

5.267 MHAFilter::transfer_function_t Struct Reference

a structure containing a source channel number, a target channel number, and an impulse response.

Public Member Functions

- **transfer_function_t** ()
Default constructor for STL conformity.
- **transfer_function_t** (unsigned int **source_channel_index**, unsigned int **target_↔
channel_index**, const std::vector< float > & **impulse_response**)
Data constructor.
- unsigned int **partitions** (unsigned int fragsize) const
for the given partition size, return the number of partitions of the impulse response.
- unsigned int **non_empty_partitions** (unsigned int fragsize) const
for the given partition size, return the number of non-empty partitions of the impulse response.
- bool **isempty** (unsigned int fragsize, unsigned int index) const
checks if the partition contains only zeros

Public Attributes

- unsigned int **source_channel_index**
Source audio channel index for this transfer function.
- unsigned int **target_channel_index**
Target audio channel index for this transfer function.
- std::vector< float > **impulse_response**
Impulse response of transfer from source to target channel.

5.267.1 Detailed Description

a structure containing a source channel number, a target channel number, and an impulse response.

5.267.2 Constructor & Destructor Documentation

5.267.2.1 transfer_function_t() [1/2] `MHAFilter::transfer_function_t::transfer_↔
function_t () [inline]`

Default constructor for STL conformity.

Not used.

5.267.2.2 transfer_function_t() [2/2] `MHAFilter::transfer_function_t::transfer_↔
function_t (`
 `unsigned int source_channel_index,`
 `unsigned int target_channel_index,`
 `const std::vector< float > & impulse_response)`

Data constructor.

Parameters

<i>source_channel_index</i>	Source audio channel index for this transfer function
<i>target_channel_index</i>	Target audio channel index for this transfer function
<i>impulse_response</i>	Impulse response of transfer from source to target channel

5.267.3 Member Function Documentation

5.267.3.1 partitions() `unsigned int MHAFilter::transfer_function_t::partitions (`
 `unsigned int fragsize) const [inline]`

for the given partition size, return the number of partitions of the impulse response.

Parameters

<i>fragsize</i>	partition size
-----------------	----------------

Returns

number of partitions occupied by the impulse response

5.267.3.2 non_empty_partitions() unsigned int MHAFilter::transfer_function_t↔
 ::non_empty_partitions (
 unsigned int *fragsize*) const [inline]

for the given partition size, return the number of non-empty partitions of the impulse response.

Parameters

<i>fragsize</i>	partition size
-----------------	----------------

Returns

the number of non-empty partitions of the impulse response, i.e. partitions containing only zeros are not counted.

5.267.3.3 isempty() bool MHAFilter::transfer_function_t::isempty (
 unsigned int *fragsize*,
 unsigned int *index*) const [inline]

checks if the partition contains only zeros

Parameters

<i>fragsize</i>	partition size
<i>index</i>	partition index

Returns

true when this partition of the impulse response contains only zeros.

5.267.4 Member Data Documentation

5.267.4.1 source_channel_index unsigned int MHAFilter::transfer_function_t::source←
_channel_index

Source audio channel index for this transfer function.

5.267.4.2 target_channel_index unsigned int MHAFilter::transfer_function_t::target←
_channel_index

Target audio channel index for this transfer function.

5.267.4.3 impulse_response std::vector<float> MHAFilter::transfer_function_t←
::impulse_response

Impulse response of transfer from source to target channel.

The documentation for this struct was generated from the following files:

5.268 MHAFilter::transfer_matrix_t Struct Reference

A sparse matrix of transfer function partitions.

Inherits vector< transfer_function_t >.

Public Member Functions

- std::valarray< unsigned int > **partitions** (unsigned fragsize) const
*Returns an array of the results of calling the **partitions()** (p. 995) method on every matrix member.*
- std::valarray< unsigned int > **non_empty_partitions** (unsigned int fragsize) const
*Returns an array of the results of calling the **non_empty_partitions()** (p. 995) method on every matrix member.*

5.268.1 Detailed Description

A sparse matrix of transfer function partitions.

Each matrix element knows its position in the matrix, so they can be stored as a vector.

5.268.2 Member Function Documentation

5.268.2.1 partitions() `std::valarray<unsigned int> MHAFilter::transfer_matrix_t↔::partitions (unsigned int fragsize) const [inline]`

Returns an array of the results of calling the **partitions()** (p. 995) method on every matrix member.

5.268.2.2 non_empty_partitions() `std::valarray<unsigned int> MHAFilter::transfer↔_matrix_t::non_empty_partitions (unsigned int fragsize) const [inline]`

Returns an array of the results of calling the **non_empty_partitions()** (p. 995) method on every matrix member.

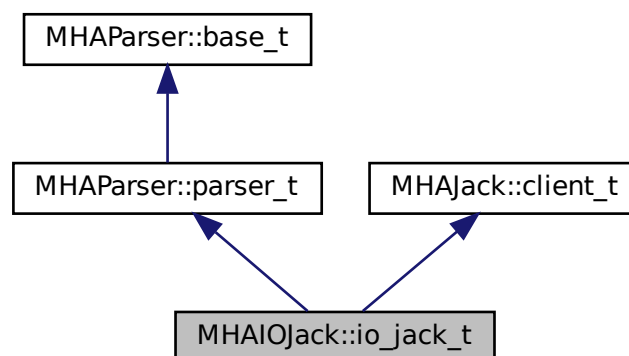

The documentation for this struct was generated from the following file:

5.269.1 Detailed Description

Main class for JACK IO.

This class registers a JACK client. JACK and framework states are managed by this class.

5.269.2 Constructor & Destructor Documentation

5.269.2.1 io_jack_t() `io_jack_t::io_jack_t (`
 `unsigned int fragsize,`
 `float samplerate,`
 `IOProcessEvent_t proc_event,`
 `void * proc_handle,`
 `IOStartedEvent_t start_event,`
 `void * start_handle,`
 `IOStoppedEvent_t stop_event,`
 `void * stop_handle)`

5.269.3 Member Function Documentation

5.269.3.1 prepare() `void io_jack_t::prepare (`
 `int nch_in,`
 `int nch_out)`

Allocate buffers, activate JACK client and install internal ports.

5.269.3.2 release() `void io_jack_t::release ()`

5.269.3.3 reconnect_inports() void io_jack_t::reconnect_inports () [private]

Connect the input ports when connection variable is accessed.

5.269.3.4 reconnect_outports() void io_jack_t::reconnect_outports () [private]

Connect the output ports when connection variable is accessed.

5.269.3.5 get_physical_input_ports() void io_jack_t::get_physical_input_ports ()
[private]

5.269.3.6 get_physical_output_ports() void io_jack_t::get_physical_output_ports ()
[private]

5.269.3.7 get_all_input_ports() void io_jack_t::get_all_input_ports () [private]

5.274.1 Detailed Description

Generic JACK client for averaging a system response across time.

5.274.2 Constructor & Destructor Documentation

5.274.2.1 client_avg_t() `MHAJack::client_avg_t::client_avg_t (`
`const std::string & name_,`
`const unsigned int & nrep_)`

Constructor for averaging client.

Parameters

<i>name</i> ↔ —	Name of JACK client
<i>nrep</i> ↔ —	Number of repetitions

5.274.3 Member Function Documentation

5.274.3.1 io() void MHAJack::client_avg_t::io (

 mha_wave_t * is_out,

 mha_wave_t * is_in,

 const std::vector< std::string > & p_out,

 const std::vector< std::string > & p_in,

 float * srate = NULL,

 unsigned int * fragsize = NULL)

Recording function.

long-description

Parameters

<i>is_out</i>	Input (test) signal, which will be repeated
<i>is_in</i>	System response (averaged, same length as input required)
<i>p_out</i>	Ports to play back the test signal
<i>p_in</i>	Ports to record from the system response
<i>srate</i>	Pointer to sampling rate variable, will be filled with server sampling rate
<i>fragsize</i>	Pointer to fragment size variable, will be filled with server fragment size

5.274.3.2 proc() [1/2] int MHAJack::client_avg_t::proc (

 void * handle,

 mha_wave_t * sIn,

 mha_wave_t ** sOut) [static], [private]

5.276.1 Detailed Description

Generic asynchronous JACK client.

5.276.2 Constructor & Destructor Documentation

```

5.276.2.1 client_t() MHAJack::client_t::client_t (
    IOProcessEvent_t proc_event,
    void * proc_handle = NULL,
    IOStartedEvent_t start_event = NULL,
    void * start_handle = NULL,
    IOStoppedEvent_t stop_event = NULL,
    void * stop_handle = NULL,
    bool use_jack_transport = false )

```

5.276.3 Member Function Documentation

```

5.276.3.1 prepare() [1/2] void MHAJack::client_t::prepare (
    const std::string & client_name,
    const unsigned int & nch_in,
    const unsigned int & nch_out )

```

Allocate buffers, activate JACK client and install internal ports.

Registers the jack client with the default jack server and activates it.

Parameters

<i>client_name</i>	Name of this jack client
<i>nch_in</i>	Input ports to register
<i>nch_out</i>	Output ports to register

```

5.276.3.2 prepare() [2/2] void MHAJack::client_t::prepare (
    const std::string & server_name,
    const std::string & client_name,
    const unsigned int & nch_in,
    const unsigned int & nch_out )

```

Allocate buffers, ports, and activates JACK client.

Registers the jack client with specified jack server and activates it.

Parameters

<i>server_name</i>	Name of the jack server to register with
<i>client_name</i>	Name of this jack client
<i>nch_in</i>	Input ports to register
<i>nch_out</i>	Output ports to register

5.276.3.3 release() `void MHAJack::client_t::release ()`

Remove JACK client and deallocate internal ports and buffers.

5.276.3.4 start() `void MHAJack::client_t::start (`
`bool fail_on_async_jack_error = true)`

5.276.3.5 stop() `void MHAJack::client_t::stop ()`

5.276.3.6 connect_input() `void MHAJack::client_t::connect_input (`
`const std::vector< std::string > & con)`

Connect the input ports when connection variable is accessed.

5.276.3.7 connect_output() `void MHAJack::client_t::connect_output (`
`const std::vector< std::string > & con)`

Connect the output ports when connection variable is accessed.

5.276.3.8 get_fragsize() `unsigned int MHAJack::client_t::get_fragsize () const`
`[inline]`

5.276.3.9 get_srate() `float MHAJack::client_t::get_srate () const [inline]`

5.276.3.10 get_xruns() unsigned long MHAJack::client_t::get_xruns () [inline]

5.276.3.11 get_xruns_reset() unsigned long MHAJack::client_t::get_xruns_reset ()

5.276.3.12 str_error() std::string MHAJack::client_t::str_error (int err)

5.276.3.13 get_ports() void MHAJack::client_t::get_ports (std::vector< std::string > & res, unsigned long jack_flags)

Get a list of Jack ports.

Parameters

<i>res</i>	Result string vector
<i>jack_flags</i>	Jack port flags (JackPortInput etc.)

5.276.3.14 get_my_input_ports() std::vector< std::string > MHAJack::client_t↔::get_my_input_ports ()

5.276.3.15 get_my_output_ports() std::vector< std::string > MHAJack::client_t↔::get_my_output_ports ()

5.276.3.16 set_input_portnames() void MHAJack::client_t::set_input_portnames (const std::vector< std::string > & names)

5.276.3.17 set_output_portnames() void MHAJack::client_t::set_output_portnames (const std::vector< std::string > & names)

5.276.3.18 get_cpu_load() float MHAJack::client_t::get_cpu_load ()

5.276.3.19 set_use_jack_transport() void MHAJack::client_t::set_use_jack_transport (bool ut) [inline]

5.276.3.20 is_prepared() bool MHAJack::client_t::is_prepared () const [inline]

5.276.3.21 prepare_impl() void MHAJack::client_t::prepare_impl (const char * server_name, const char * client_name, const unsigned int & nch_in, const unsigned int & nch_out) [private]

Allocate buffers, activate JACK client and allocates jack ports Registers the jack client with the given server and activates it.

Parameters

<i>server_name</i>	Name of the jack server to register with
<i>client_name</i>	Name of this jack client
<i>nch_in</i>	Input ports to register
<i>nch_out</i>	Output ports to register

5.276.3.22 internal_start() void MHAJack::client_t::internal_start () [private]

5.276.3.23 internal_stop() void MHAJack::client_t::internal_stop () [private]

5.276.3.24 stopped() void MHAJack::client_t::stopped (
int *proc_err*,
int *io_err*) [private]

5.276.3.25 jack_proc_cb() [1/2] int MHAJack::client_t::jack_proc_cb (
jack_nframes_t *n*,
void * *h*) [static], [private]

5.276.3.26 jack_proc_cb() [2/2] int MHAJack::client_t::jack_proc_cb (
jack_nframes_t *n*) [private]

This is the main processing callback.

Here happens double buffering and downsampling.

5.276.3.27 jack_xrun_cb() [1/2] int MHAJack::client_t::jack_xrun_cb (
void * *h*) [static], [private]

5.277 MHAJack::port_t Class Reference

Class for one channel/port.

Public Types

- enum **dir_t** { **input**, **output** }

Public Member Functions

- **port_t** (jack_client_t * **jc**, **dir_t** dir, int id)
- **port_t** (jack_client_t * **jc**, **dir_t** dir, const std::string &id)
Constructor to create port with specific name.
- ~**port_t** ()
- void **read** (**mha_wave_t** *s, unsigned int ch)
- void **write** (**mha_wave_t** *s, unsigned int ch)
- void **mute** (unsigned int n)
- void **connect_to** (const char *pn)
- const char * **get_short_name** ()
Return the port name.

Private Attributes

- **dir_t dir_type**
- jack_port_t * **port**
- jack_default_audio_sample_t * **iob**
- jack_client_t * **jc**

5.277.1 Detailed Description

Class for one channel/port.

This class represents one JACK port. Double buffering for asynchronous process callbacks is managed by this class.

5.277.2 Member Enumeration Documentation

5.277.2.1 dir_t enum MHAJack::port_t::dir_t

Enumerator

input	
output	

5.277.3 Constructor & Destructor Documentation

5.277.3.1 port_t() [1/2] MHAJack::port_t::port_t (
 jack_client_t * *jc*,
 dir_t *dir*,
 int *id*)

Parameters

<i>jc</i>	JACK client.
<i>dir</i>	Direction (input/output).
<i>id</i>	Number in port name (starting with 1).

5.277.3.2 port_t() [2/2] MHAJack::port_t::port_t (
 jack_client_t * *jc*,
 dir_t *dir*,
 const std::string & *id*)

Constructor to create port with specific name.

Parameters

<i>jc</i>	JACK client.
<i>dir</i>	Direction (input/output).
<i>id</i>	Port name.

5.277.3.3 ~port_t() MHAJack::port_t::~~port_t ()

5.277.4 Member Function Documentation

5.277.4.1 read() void MHAJack::port_t::read (
 mha_wave_t * *s*,
 unsigned int *ch*)

Parameters

<i>s</i>	Signal structure to store the audio data.
<i>ch</i>	Channel number in audio data structure to be used.

5.277.4.2 write() void MHAJack::port_t::write (
 mha_wave_t * *s*,
 unsigned int *ch*)

Parameters

<i>s</i>	Signal structure from which the audio data is read.
<i>ch</i>	Channel number in audio data structure to be used.

5.277.4.3 mute() `void MHAJack::port_t::mute (unsigned int n)`

Parameters

<i>n</i>	Number of samples to be muted (must be the same as reported by Jack processing callback).
----------	---

5.277.4.4 connect_to() `void MHAJack::port_t::connect_to (const char * pn)`

Parameters

<i>pn</i>	Port name to connect to
-----------	-------------------------

5.277.4.5 get_short_name() `const char * MHAJack::port_t::get_short_name ()`

Return the port name.

5.277.5 Member Data Documentation

5.278.2.1 base_t() `MHAMultiSrc::base_t::base_t (MHA_AC::algo_comm_t & iac)`

5.278.3 Member Function Documentation

5.278.3.1 select_source() `void MHAMultiSrc::base_t::select_source (const std::vector< std::string > & src, int in_channels)`

Change the selection of input sources.

This function is real-time and thread safe.

Parameters

<code>src</code>	List of input sources
<code>in_channels</code>	Number of input channels in direct input (the processed signal)

5.278.4 Member Data Documentation

5.278.4.1 **ac** `MHA_AC::algo_comm_t& MHAMultiSrc::base_t::ac` [protected]

5.280 MHAMultiSrc::channels_t Class Reference

Inherits `vector< MHAMultiSrc::channel_t >`.

Public Member Functions

- **channels_t** (const std::vector< std::string > &src, int in_channels)
Separate a list of input sources into a parsable channel list.

5.280.1 Constructor & Destructor Documentation

5.280.1.1 channels_t() MHAMultiSrc::channels_t::channels_t (
const std::vector< std::string > & route,
int in_channels)

Separate a list of input sources into a parsable channel list.

The number of input channels if verified, a list of **MHAMultiSrc::channel_t** (p. [1044](#)) is filled.

Parameters

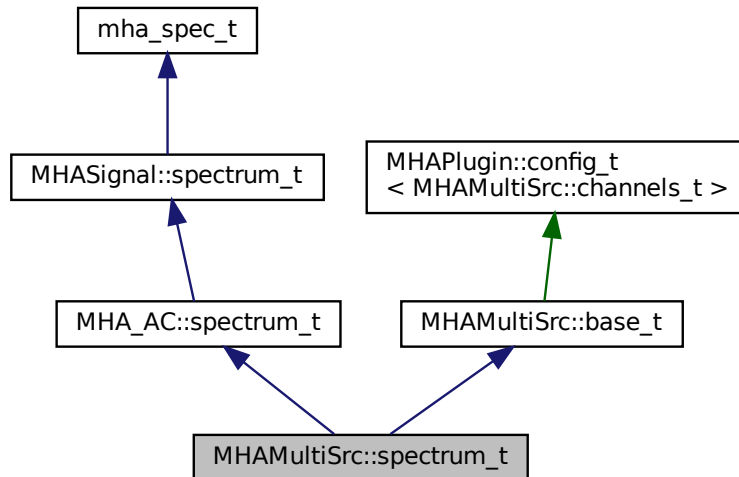

<i>route</i>	vector of source channel ids
<i>in_channels</i>	number of channels in the processed input signal

The documentation for this class was generated from the following files:

- **mha_multisrc.h**
- **mha_multisrc.cpp**

Allow that frequency bands contain only zeros.
- **MHAParser::vfloat_mon_t cf**
Final center frequencies in Hz.
- **MHAParser::vfloat_mon_t ef**
Final edge frequencies in Hz.
- **MHAParser::vfloat_mon_t cLTASS**
Bandwidth correction for LTASS noise (level of 0 dB RMS LTASS noise)
- **MHAParser::mfloat_mon_t shapes**

5.288.1 Detailed Description

Set of configuration variables for FFT-based overlapping filters.

This class enables easy configuration of the FFT-based overlapping filterbank. An instance of **fftfb_vars_t** (p. 1058) creates openMHA configuration language variables needed for configuring the filterbank, and inserts these variables in the openMHA configuration tree.

This way, the variables are visible to the user and can be configured using the openMHA configuration language.

5.288.2 Constructor & Destructor Documentation

5.288.2.1 **fftfb_vars_t()** `MHAOvIFilter::fftfb_vars_t::fftfb_vars_t (MHAParser::parser_t & p)`

construct a set of openMHA configuration language variables suitable for configuring the FFT-based overlapping filterbank.

Parameters

<i>p</i>	The node of the configuration tree where the variables created by this instance are inserted.
----------	---

5.288.3 Member Data Documentation

5.288.3.1 fscale `scale_var_t MHAOvlFilter::fftfb_vars_t::fscale`

Frequency scale type (lin/bark/log/erb).

5.288.3.2 ovlttype `scale_var_t MHAOvlFilter::fftfb_vars_t::ovlttype`

Filter shape (rect/lin/hann).

5.288.3.3 plateau `MHAParser::float_t MHAOvlFilter::fftfb_vars_t::plateau`

relative plateau width.

5.288.3.4 ftype `MHAParser::kw_t MHAOvlFilter::fftfb_vars_t::ftype`

Flag to decide whether edge or center frequencies are used.

5.288.3.5 f `fscale_t MHAOvlFilter::fftfb_vars_t::f`

Frequency.

5.288.3.6 normalize `MHAParser::bool_t MHAOvlFilter::fftfb_vars_t::normalize`

Normalize sum of channels.

5.288.3.7 fail_on_nonmonotonic `MHAParser::bool_t MHAOvlFilter::fftfb_vars_t↔
::fail_on_nonmonotonic`

Fail if frequency entries are non-monotonic (otherwise sort)

5.288.3.8 fail_on_unique_bins `MHAParser::bool_t MHAOvFilter::fftfb_vars_t::fail↔
_on_unique_bins`

Fail if center frequencies share the same FFT bin.

5.288.3.9 flag_allow_empty_bands `MHAParser::bool_t MHAOvFilter::fftfb_vars_t↔
::flag_allow_empty_bands`

Allow that frequency bands contain only zeros.

5.288.3.10 cf `MHAParser::vfloat_mon_t MHAOvFilter::fftfb_vars_t::cf`

Final center frequencies in Hz.

5.288.3.11 ef `MHAParser::vfloat_mon_t MHAOvFilter::fftfb_vars_t::ef`

Final edge frequencies in Hz.

5.288.3.12 cLTASS `MHAParser::vfloat_mon_t MHAOvFilter::fftfb_vars_t::cLTASS`

Bandwidth correction for LTASS noise (level of 0 dB RMS LTASS noise)

5.288.3.13 shapes `MHAParser::mfloat_mon_t MHAOvFilter::fftfb_vars_t::shapes`

The documentation for this class was generated from the following files:

5.296.1 Detailed Description

Base class for all parser items.

The key method of the parser base class is the `std::string parse(const std::string&)` (p. 1082) method. Parser proxy derivatives which overwrite any of the other `parse()` (p. 1082) methods to be the key method must make sure that the original `parse()` (p. 1082) method utilizes the new key method.

5.296.2 Member Typedef Documentation

5.296.2.1 repl_list_t `typedef std::vector< replace_t> MHAParser::base_t::repl_↔
list_t [private]`

5.296.3 Constructor & Destructor Documentation

5.296.3.1 base_t() [1/3] `MHAParser::base_t::base_t (
const std::string & h)`

Constructor for base class of all parser nodes.

Parameters

<i>h</i>	Help text describing this parser node. This help text is accessible to the configuration language through the "?help" query command.
----------	--

5.296.3.2 base_t() [2/3] `MHAParser::base_t::base_t (
const base_t & src)`

Copy constructor for `base_t` (p. 1077).

Copies help text and id string, but does not insert the new node into the parser tree structure.

Parameters

<i>src</i>	Source parser
------------	---------------

Deprecated Copying parser nodes makes little sense, avoid wherever possible

5.296.3.3 **base_t()** [3/3] `MHAParser::base_t::base_t (`
`base_t &&) [delete]`

5.296.3.4 **~base_t()** `MHAParser::base_t::~~base_t () [virtual]`

5.296.4 Member Function Documentation

5.296.4.1 **operator=()** [1/2] `base_t& MHAParser::base_t::operator= (`
`const base_t &) [default]`

5.296.4.2 **operator=()** [2/2] `base_t& MHAParser::base_t::operator= (`
`base_t &&) [delete]`

5.296.4.3 **parse()** [1/3] `std::string MHAParser::base_t::parse (`
`const std::string & cs) [virtual]`

Causes this node to process a command in the openMHA configuration language.

Parameters

<i>cs</i>	The command to parse
-----------	----------------------

Returns

The response to the command, if successful

Exceptions

<i>MHA_Error</i> (p. 818)	If the command cannot be executed successfully. The reason for failure is given in the message string of the exception.
---	---

Reimplemented in [plug_wrapperl](#) (p. [1401](#)), [PluginLoader::mhapluginloader_t](#) (p. [1419](#)), [plug_wrapper](#) (p. [1399](#)), [io_wrapper](#) (p. [668](#)), and [altplugs_t](#) (p. [317](#)).

5.296.4.4 parse() [2/3] `void MHAParser::base_t::parse (const char * cmd, char * retv, unsigned int len) [virtual]`

This function parses a command and writes the parsing result into a C character array.

This base class implementation delegates to [parse\(const std::string &\)](#) (p. [1082](#)).

Parameters

<i>cmd</i>	Command to be parsed
<i>retv</i>	Buffer for the result
<i>len</i>	Length of buffer

Reimplemented in [altplugs_t](#) (p. [317](#)).

5.296.4.5 parse() [3/3] `void MHAParser::base_t::parse (const std::vector< std::string > & cs, std::vector< std::string > & retv) [virtual]`

5.296.4.6 op_subparse() `std::string MHAParser::base_t::op_subparse (expression_t &) [virtual]`

Reimplemented in **MHAParser::c_ifc_parser_t** (p. 1098), and **MHAParser::parser_t** (p. 1152).

5.296.4.7 op_setval() `std::string MHAParser::base_t::op_setval (expression_t &) [virtual]`

Reimplemented in **MHAParser::c_ifc_parser_t** (p. 1098), **MHAParser::mcomplex_t** (p. 1129), **MHAParser::mfloat_t** (p. 1134), **MHAParser::mint_t** (p. 1146), **MHAParser::vcomplex_t** (p. 1170), **MHAParser::vfloat_t** (p. 1175), **MHAParser::vint_t** (p. 1180), **MHAParser::complex_t** (p. 1105), **MHAParser::float_t** (p. 1112), **MHAParser::int_t** (p. 1117), **MHAParser::bool_t** (p. 1096), **MHAParser::vstring_t** (p. 1184), **MHAParser::string_t** (p. 1164), **MHAParser::kw_t** (p. 1124), **MHAParser::variable_t** (p. 1166), and **MHAParser::parser_t** (p. 1153).

5.296.4.8 op_query() `std::string MHAParser::base_t::op_query (expression_t &) [virtual]`

Reimplemented in **MHAParser::c_ifc_parser_t** (p. 1098), **MHAParser::monitor_t** (p. 1148), and **MHAParser::parser_t** (p. 1153).

5.296.4.9 query_dump() `std::string MHAParser::base_t::query_dump (const std::string &) [virtual]`

Reimplemented in **MHAParser::monitor_t** (p. 1148), and **MHAParser::parser_t** (p. 1153).

5.296.4.10 query_entries() `std::string MHAParser::base_t::query_entries (const std::string &) [virtual]`

Reimplemented in **MHAParser::parser_t** (p. 1153).

5.296.4.11 query_perm() `std::string MHAParser::base_t::query_perm (const std::string &) [virtual]`

Reimplemented in **MHAParser::variable_t** (p. 1166), and **MHAParser::monitor_t** (p. 1148).

5.296.4.12 query_range() `std::string MHAParser::base_t::query_range (const std::string &) [virtual]`

Reimplemented in **MHAParser::kw_t** (p. 1125), and **MHAParser::range_var_t** (p. 1157).

5.296.4.13 query_type() `std::string MHAParser::base_t::query_type (const std::string &) [virtual]`

Reimplemented in **MHAParser::mcomplex_mon_t** (p. 1127), **MHAParser::vcomplex_mon_t** (p. 1168), **MHAParser::complex_mon_t** (p. 1103), **MHAParser::float_mon_t** (p. 1110), **MHAParser::mfloat_mon_t** (p. 1131), **MHAParser::vfloat_mon_t** (p. 1173), **MHAParser::mint_mon_t** (p. 1143), **MHAParser::vint_mon_t** (p. 1178), **MHAParser::vstring_mon_t** (p. 1183), **MHAParser::string_mon_t** (p. 1161), **MHAParser::bool_mon_t** (p. 1093), **MHAParser::int_mon_t** (p. 1115), **MHAParser::mcomplex_t** (p. 1129), **MHAParser::mfloat_t** (p. 1134), **MHAParser::mint_t** (p. 1146), **MHAParser::vcomplex_t** (p. 1171), **MHAParser::vfloat_t** (p. 1175), **MHAParser::vint_t** (p. 1180), **MHAParser::complex_t** (p. 1105), **MHAParser::float_t** (p. 1112), **MHAParser::int_t** (p. 1118), **MHAParser::bool_t** (p. 1096), **MHAParser::vstring_t** (p. 1184), **MHAParser::string_t** (p. 1164), **MHAParser::kw_t** (p. 1125), and **MHAParser::parser_t** (p. 1153).

5.296.4.14 query_val() `std::string MHAParser::base_t::query_val (const std::string &) [virtual]`

Reimplemented in **MHAParser::mcomplex_mon_t** (p. 1127), **MHAParser::vcomplex_mon_t** (p. 1168), **MHAParser::complex_mon_t** (p. 1103), **MHAParser::float_mon_t** (p. 1109), **MHAParser::mfloat_mon_t** (p. 1131), **MHAParser::vfloat_mon_t** (p. 1173), **MHAParser::mint_mon_t** (p. 1143), **MHAParser::vint_mon_t** (p. 1177), **MHAParser::vstring_mon_t** (p. 1182), **MHAParser::string_mon_t** (p. 1161), **MHAParser::bool_mon_t** (p. 1093), **MHAParser::int_mon_t** (p. 1115), **MHAParser::mcomplex_t** (p. 1129), **MHAParser::mfloat_t** (p. 1134), **MHAParser::mint_t** (p. 1146), **MHAParser::vcomplex_t** (p. 1171), **MHAParser::vfloat_t** (p. 1176), **MHAParser::vint_t** (p. 1180), **MHAParser::complex_t** (p. 1105), **MHAParser::float_t** (p. 1113), **MHAParser::int_t** (p. 1118), **MHAParser::bool_t** (p. 1096), **MHAParser::vstring_t** (p. 1185), **MHAParser::string_t** (p. 1164), **MHAParser::kw_t** (p. 1125), and **MHAParser::parser_t** (p. 1154).

5.296.4.15 query_readfile() `std::string MHAParser::base_t::query_readfile (const std::string &) [virtual]`

Reimplemented in **MHAParser::parser_t** (p. 1153).

5.296.4.16 query_savefile() `std::string MHAParser::base_t::query_savefile (const std::string &) [virtual]`

Reimplemented in **MHAParser::parser_t** (p. 1154).

5.296.4.17 query_savefile_compact() `std::string MHAParser::base_t::query_savefile↔_compact (const std::string &) [virtual]`

Reimplemented in **MHAParser::parser_t** (p. 1154).

5.296.4.18 query_savemons() `std::string MHAParser::base_t::query_savemons (const std::string &) [virtual]`

Reimplemented in **MHAParser::parser_t** (p. 1154).

5.296.4.19 query_listids() `std::string MHAParser::base_t::query_listids (const std::string &) [virtual]`

Reimplemented in **MHAParser::parser_t** (p. 1154).

5.296.4.20 query_version() `std::string MHAParser::base_t::query_version (const std::string &)`

5.296.4.21 query_id() `std::string MHAParser::base_t::query_id (const std::string &)`

5.296.4.22 query_subst() `std::string MHAParser::base_t::query_subst (const std::string &)`

5.296.4.23 query_addsubst() `std::string MHAParser::base_t::query_addsubst (const std::string & s)`

5.296.4.24 query_help() `std::string MHAParser::base_t::query_help (const std::string &)`

5.296.4.25 query_cmds() `std::string MHAParser::base_t::query_cmds (const std::string &)`

5.296.4.26 set_node_id() `void MHAParser::base_t::set_node_id (const std::string & s)`

Set the identification string of this parser node.

The id can be queried from the configuration language using the ?id query command. Nodes can be found by id using the ?listid query command on a containing parser node.

Parameters

s	The new identification string.
---	--------------------------------

5.296.4.27 set_help() `void MHAParser::base_t::set_help (`

```
const std::string & s )
```

Set the help comment of a variable or parser.

Parameters

s	New help comment.
----------	-------------------

5.296.4.28 add_parent_on_insert() void MHAParser::base_t::add_parent_on_insert (
 parser_t * *p*,
 std::string *n*)

5.296.4.29 rm_parent_on_remove() void MHAParser::base_t::rm_parent_on_remove (
 parser_t *)

5.296.4.30 fullname() const std::string & MHAParser::base_t::fullname () const

Return the full dot-separated path name of this parser node in the openMHA configuration tree.

5.296.4.31 activate_query() void MHAParser::base_t::activate_query (
 const std::string & *n*,
 query_t *a*) [protected]

5.296.4.32 notify() void MHAParser::base_t::notify () [protected]

5.296.4.33 add_replace_pair() void MHAParser::base_t::add_replace_pair (
 const std::string & *a*,
 const std::string & *b*) [private]

5.296.4.34 oplist() `std::string MHParse::base_t::oplist () [private]`

5.296.5 Member Data Documentation

5.296.5.1 writeaccess `MHAEvents::emitter_t MHParse::base_t::writeaccess`

Event emitted on write access.

To connect a callback that is invoked on write access to this parser variable, use `MHAEvents::patchbay_t<receiver_t>` method `connect(&writeaccess,&receiver_t::callback)` where `callback` is a method that expects no parameters and returns void.

5.296.5.2 valuechanged `MHAEvents::emitter_t MHParse::base_t::valuechanged`

Event emitted if the value has changed.

To connect a callback that is invoked when write access to this parser variable actually changes its value, use `MHAEvents::patchbay_t<receiver_t>` method `connect(&valuechanged,&receiver_t::callback)` where `callback` is a method that expects no parameters and returns void.

5.296.5.3 readaccess `MHAEvents::emitter_t MHParse::base_t::readaccess`

Event emitted on read access.

To connect a callback that is invoked after the value of this variable has been read through the configuration interface, use `MHAEvents::patchbay_t<receiver_t>` method `connect(&readaccess,&receiver_t::callback)` where `callback` is a method that expects no parameters and returns void.

5.296.5.4 prereadaccess `MHAEvents::emitter_t MHParse::base_t::prereadaccess`

Event emitted on read access, before the data field is accessed.

To connect a callback that is invoked when the value of this variable is about to be read through the configuration interface, so that the callback can influence the value that is reported, use `MHAEvents::patchbay_t<receiver_t>` method `connect(&prereadaccess,&receiver_t::callback)` where `callback` is a method that expects no parameters and returns void.

Public Member Functions

- **`bool_mon_t`** (`const std::string &hlp`)
Create a monitor variable for string values.

Public Attributes

- bool **data**
Data field.

Protected Member Functions

- std::string **query_val** (const std::string &)
- std::string **query_type** (const std::string &)

Additional Inherited Members

5.298.1 Detailed Description

Monitor with string value.

5.298.2 Constructor & Destructor Documentation

5.298.2.1 bool_mon_t() MHAParser::bool_mon_t::bool_mon_t (
const std::string & *hlp*)

Create a monitor variable for string values.

Parameters

<i>hlp</i>	A help text describing this monitor variable.
------------	---

5.298.3 Member Function Documentation

5.298.3.1 query_val() std::string MHAParser::bool_mon_t::query_val (
const std::string & *s*) [protected], [virtual]

Reimplemented from **MHAParser::base_t** (p. 1085).

5.298.3.2 query_type() `std::string MHAParser::bool_mon_t::query_type (const std::string &) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. 1085).

5.298.4 Member Data Documentation

5.298.4.1 data `bool MHAParser::bool_mon_t::data`

Data field.

The documentation for this class was generated from the following files:

- **mha_parser.hh**
- **mha_parser.cpp**

5.299 MHAParser::bool_t Class Reference

Variable with a boolean value ("yes"/"no")

Inheritance diagram for MHAParser::bool_t:

Public Member Functions

- **bool_t** (const std::string &help_text, const std::string &initial_value)
Constructor for a configuration language variable for boolean values.

Public Attributes

- bool **data**
Data field.

Protected Member Functions

- std::string **op_setval** (**expression_t** &)
- std::string **query_type** (const std::string &)
- std::string **query_val** (const std::string &)

Additional Inherited Members

5.299.1 Detailed Description

Variable with a boolean value ("yes"/"no")

5.299.2 Constructor & Destructor Documentation

5.299.2.1 bool_t() MHAParser::bool_t::bool_t (
const std::string & *help_text*,
const std::string & *initial_value*)

Constructor for a configuration language variable for boolean values.

Parameters

<i>help_text</i>	A human-readable text describing the purpose of this configuration variable.
<i>initial_value</i>	The initial value for this variable as a string. The string representation of 'true' is either "yes" or "1". The string representation of 'false' is either "no" or "0".

5.299.3 Member Function Documentation

5.299.3.1 op_setval() `std::string MHAParser::bool_t::op_setval (expression_t & x) [protected], [virtual]`

Reimplemented from **MHAParser::variable_t** (p. [1166](#)).

5.299.3.2 query_type() `std::string MHAParser::bool_t::query_type (const std::string &) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. [1085](#)).

5.299.3.3 query_val() `std::string MHAParser::bool_t::query_val (const std::string & s) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. [1085](#)).

5.299.4 Member Data Documentation

5.299.4.1 data `bool MHAParser::bool_t::data`

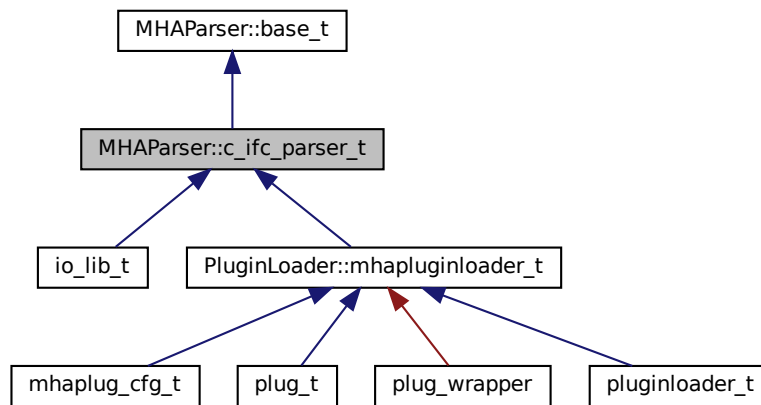

Data field.

The documentation for this class was generated from the following files:

- **mha_parser.hh**
- **mha_parser.cpp**

5.300 MHAParser::c_ifc_parser_t Class Reference

Inheritance diagram for MHAParser::c_ifc_parser_t:

Public Member Functions

- **c_ifc_parser_t** (const std::string &modulename_)
- **~c_ifc_parser_t** ()
- void **set_parse_cb** (c_parse_cmd_t, c_parse_err_t, void *)

Protected Member Functions

- std::string **op_subparse** (MHAParser::expression_t &)
- std::string **op_setval** (MHAParser::expression_t &)
- std::string **op_query** (MHAParser::expression_t &)

Private Member Functions

5.300.3.6 ret_size `unsigned int MHAParser::c_ifc_parser_t::ret_size [private]`

5.300.3.7 retv `char* MHAParser::c_ifc_parser_t::retv [private]`

The documentation for this class was generated from the following files:

- `mha_parser.hh`
- `mha_parser.cpp`

5.301 MHAParser::commit_t< receiver_t > Class Template Reference

Parser variable with event-emission functionality.

Inheritance diagram for MHAParser::commit_t< receiver_t >:

Public Member Functions

- **commit_t** (`receiver_t *`, `void(receiver_t::*)()`, `const std::string & help="Variable changes action"`)

Private Attributes

- **MHAEvents::connector_t**< receiver_t > **extern_connector**

Additional Inherited Members

5.301.1 Detailed Description

```
template<class receiver_t>
class MHAParser::commit_t< receiver_t >
```

Parser variable with event-emission functionality.

The **commit_t** (p. 1100) variable can register an event receiver in its constructor, which is called whenever the variable is set to "commit".

5.301.2 Constructor & Destructor Documentation

```
5.301.2.1 commit_t() template<class receiver_t >
MHAParser::commit_t< receiver_t >:: commit_t (
    receiver_t * r,
    void(receiver_t::*) () rfun,
    const std::string & help = "Variable changes action" )
```

5.301.3 Member Data Documentation

```
5.301.3.1 extern_connector template<class receiver_t >
MHAEvents::connector_t<receiver_t> MHAParser::commit_t< receiver_t >::extern_↵
connector [private]
```

The documentation for this class was generated from the following file:

- **mha_parser.hh**

5.302 MHParse::complex_mon_t Class Reference

Monitor with complex value.

Inheritance diagram for MHParse::complex_mon_t:

Public Member Functions

- **complex_mon_t** (const std::string &hlp)
Create a complex monitor variable.

Public Attributes

- **mha_complex_t data**
Data field.

Protected Member Functions

- std::string **query_val** (const std::string &)
- std::string **query_type** (const std::string &)

Additional Inherited Members

5.302.1 Detailed Description

Monitor with complex value.

5.302.2 Constructor & Destructor Documentation

5.302.2.1 complex_mon_t() MHAParser::complex_mon_t::complex_mon_t (
 const std::string & *hlp*)

Create a complex monitor variable.

Parameters

<i>hlp</i>	A help text describing this monitor variable.
------------	---

5.302.3 Member Function Documentation

5.302.3.1 query_val() std::string MHAParser::complex_mon_t::query_val (
 const std::string & *s*) [protected], [virtual]

Reimplemented from **MHAParser::base_t** (p. 1085).

5.302.3.2 query_type() std::string MHAParser::complex_mon_t::query_type (
 const std::string &) [protected], [virtual]

Reimplemented from **MHAParser::base_t** (p. 1085).

5.302.4 Member Data Documentation

5.302.4.1 data **mha_complex_t** MHAParser::complex_mon_t::data

Data field.

The documentation for this class was generated from the following files:

- **mha_parser.hh**
- **mha_parser.cpp**

5.303 MHAParser::complex_t Class Reference

Variable with complex value.

Inheritance diagram for MHAParser::complex_t:

5.307 MHAParser::float_t Class Reference

Variable with float value.

Inheritance diagram for MHAParser::float_t:

Public Member Functions

- **float_t** (const std::string &help_text, const std::string &initial_value, const std::string &range="")

Constructor for a configuration language variable for 32bit ieee floating-point values.

Public Attributes

- float **data**
Data field.

Protected Member Functions

- std::string **op_setval** (**expression_t** &)
- std::string **query_type** (const std::string &)
- std::string **query_val** (const std::string &)

Additional Inherited Members

5.307.1 Detailed Description

Variable with float value.

5.307.2 Constructor & Destructor Documentation

5.307.2.1 float_t() `MHAParser::float_t::float_t (`
`const std::string & help_text,`
`const std::string & initial_value,`
`const std::string & range = "")`

Constructor for a configuration language variable for 32bit ieee floating-point values.

Parameters

<i>help_text</i>	A human-readable text describing the purpose of this configuration variable.
<i>initial_value</i>	The initial value for this variable as a string (decimal representation of the floating-point variable). If a range is given in the third parameter, then the initial value has to be within the range. A human-readable text describing the purpose of this configuration variable.
<i>range</i>	The range of values that this variable can hold can be restricted. A range is a string of the form "[a,b]", where a and b are decimal representations of the inclusive boundaries of the range. $a \leq b$. In a range of the form "]a,b[", both boundaries are excluded. Mixed forms are permitted. a or b can also be omitted if there is no lower or upper limit. The range of values is always restricted by the representable range of the underlying C data type.

5.307.3 Member Function Documentation

5.307.3.1 op_setval() `std::string MHAParser::float_t::op_setval (`
`expression_t & x) [protected], [virtual]`

Reimplemented from `MHAParser::variable_t` (p. 1166).

5.307.3.2 query_type() `std::string MHAParser::float_t::query_type (const std::string &) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. 1085).

5.307.3.3 query_val() `std::string MHAParser::float_t::query_val (const std::string & s) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. 1085).

5.307.4 Member Data Documentation

5.307.4.1 data `float MHAParser::float_t::data`

Data field.

The documentation for this class was generated from the following files:

- **mha_parser.cpp**

5.310 MHAParser::keyword_list_t Class Reference

Keyword list class.

Public Types

- typedef `std::vector< std::string >::size_type` **size_t**

Public Member Functions

- void **set_value** (const std::string &)
Select a value from keyword list.
- void **set_entries** (const std::string &)
Set keyword list entries.
- const std::string & **get_value** () const
Return selected value.
- const std::vector< std::string > & **get_entries** () const
Return keyword list.
- const **size_t** & **get_index** () const
Return index of selected value.
- void **set_index** (unsigned int)
- void **validate** () const
Check if index of selected value is valid.
- void **add_entry** (const std::string &en)
- **keyword_list_t** ()
Constructor.

Private Attributes

- **size_t** **index**
Index into list.
- std::vector< std::string > **entries**
List of valid entries.
- std::string **empty_string**

5.310.1 Detailed Description

Keyword list class.

The stucture **keyword_list_t** (p. 1118) defines a keyword list (vector of strings) with an index into the list. Used as **MHAParser::kw_t** (p. 1122), it can be used to access a set of valid keywords through the parser (i.e. one of "pear apple banana").

5.310.2 Member Typedef Documentation

5.310.2.1 size_t typedef std::vector<std::string>::size_type **MHAParser::keyword_↔
list_t::size_t**

5.310.3 Constructor & Destructor Documentation

5.310.3.1 `keyword_list_t()` `MHAParser::keyword_list_t::keyword_list_t ()`

Constructor.

5.310.4 Member Function Documentation

5.310.4.1 `set_value()` `void MHAParser::keyword_list_t::set_value (const std::string & s)`

Select a value from keyword list.

This function selects a value from the keyword list. The index is set to the last matching entry.

Parameters

s	Value to be selected.
---	-----------------------

5.310.4.2 `set_entries()` `void MHAParser::keyword_list_t::set_entries (const std::string & s)`

Set keyword list entries.

With this function, the keyword list can be set from a space separated string list.

Parameters

s	Space separated entry list.
---	-----------------------------

5.310.4.3 `get_value()` `const std::string & MHAParser::keyword_list_t::get_value ()`

const

Return selected value.

5.310.4.4 get_entries() const std::vector< std::string > & MHAParser::keyword_list_t::get_entries () const

Return keyword list.

5.310.4.5 get_index() const MHAParser::keyword_list_t::size_t & MHAParser::keyword_list_t::get_index () const

Return index of selected value.

5.310.4.6 set_index() void MHAParser::keyword_list_t::set_index (unsigned int idx)

5.310.4.7 validate() void MHAParser::keyword_list_t::validate () const

Check if index of selected value is valid.

5.310.4.8 add_entry() void MHAParser::keyword_list_t::add_entry (const std::string & en) [inline]

5.310.5 Member Data Documentation

5.310.5.1 index `size_t MHAParser::keyword_list_t::index` [private]

Index into list.

5.310.5.2 entries `std::vector<std::string> MHAParser::keyword_list_t::entries` [private]

List of valid entries.

5.310.5.3 empty_string `std::string MHAParser::keyword_list_t::empty_string` [private]

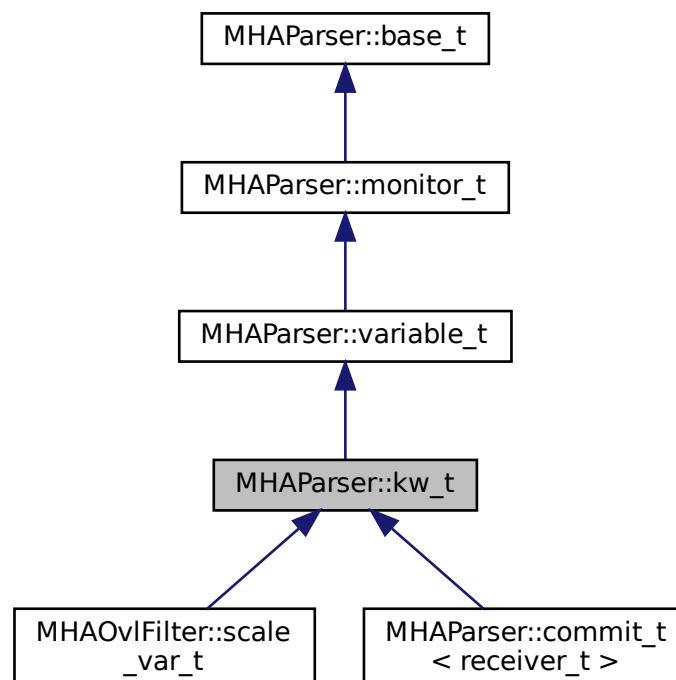

The documentation for this class was generated from the following files:

- `mha_parser.hh`
- `mha_parser.cpp`

5.311 MHAParser::kw_t Class Reference

Variable with keyword list value.

Inheritance diagram for MHAParser::kw_t:

Public Member Functions

- **kw_t** (const std::string &, const std::string &, const std::string &)
Constructor of a keyword list openMHA configuration variable.
- **kw_t** (const **kw_t** &)
Copy constructor.
- void **set_range** (const std::string &)
Set/change the list of valid entries.
- bool **isval** (const std::string &) const
Test if the given value is selected.

Public Attributes

- **keyword_list_t data**
Variable data in its native type.

Protected Member Functions

- void **validate** (const **keyword_list_t** &)
- std::string **op_setval** (**expression_t** &)
- std::string **query_range** (const std::string &)

5.311.1 Detailed Description

Variable with keyword list value.

5.311.2 Constructor & Destructor Documentation

5.311.2.1 kw_t() [1/2] MHAParser::kw_t::kw_t (
const std::string & h,
const std::string & v,
const std::string & rg)

Constructor of a keyword list openMHA configuration variable.

Parameters

<i>h</i>	A help string describing the purpose of this variable.
<i>v</i>	The initial value, has to be a value from the list of possible values given in the last parameter.
<i>rg</i>	A string containing the list of valid entries. The entries have to be separated by spaces. The list of entries has to be delimited by brackets "[", "]".

5.311.2.2 kw_t() [2/2] `MHAParser::kw_t::kw_t (const kw_t & src)`

Copy constructor.

5.311.3 Member Function Documentation

5.311.3.1 set_range() `void MHAParser::kw_t::set_range (const std::string & r)`

Set/change the list of valid entries.

Parameters

<i>r</i>	A string containing the list of valid entries. The entries have to be separated by spaces. The list of entries has to be delimited by brackets "[", "]".
----------	--

5.311.3.2 isval() `bool MHAParser::kw_t::isval (const std::string & testval) const`

Test if the given value is selected.

5.311.3.3 validate() `void MHAParser::kw_t::validate (const keyword_list_t & s) [protected]`

5.311.3.4 op_setval() `std::string MHAParser::kw_t::op_setval (expression_t & x) [protected], [virtual]`

Reimplemented from **MHAParser::variable_t** (p. 1166).

5.311.3.5 query_range() `std::string MHAParser::kw_t::query_range (const std::string &) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. 1085).

5.311.3.6 query_val() `std::string MHAParser::kw_t::query_val (const std::string & s) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. 1085).

5.311.3.7 query_type() `std::string MHAParser::kw_t::query_type (const std::string &) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. 1085).

5.311.4 Member Data Documentation

5.311.4.1 data `keyword_list_t MHAParser::kw_t::data`

Variable data in its native type.

The documentation for this class was generated from the following files:

- **mha_parser.hh**
- **mha_parser.cpp**

5.312 MHAParser::mcomplex_mon_t Class Reference

Matrix of complex numbers monitor.

Inheritance diagram for MHAParser::mcomplex_mon_t:

Public Member Functions

- **mcomplex_mon_t** (const std::string &hlp)
Create a matrix of complex floating point monitor values.

Public Attributes

- std::vector< std::vector< **mha_complex_t** > > **data**
Data field.

Protected Member Functions

- std::string **query_val** (const std::string &)
- std::string **query_type** (const std::string &)

Additional Inherited Members

5.312.1 Detailed Description

Matrix of complex numbers monitor.

5.312.2 Constructor & Destructor Documentation

5.312.2.1 mcomplex_mon_t() MHAParser::mcomplex_mon_t::mcomplex_mon_t (
 const std::string & *hlp*)

Create a matrix of complex floating point monitor values.

Parameters

<i>hlp</i>	A help text describing this monitor variable.
------------	---

5.312.3 Member Function Documentation

5.312.3.1 query_val() std::string MHAParser::mcomplex_mon_t::query_val (
 const std::string & *s*) [protected], [virtual]

Reimplemented from **MHAParser::base_t** (p. 1085).

5.312.3.2 query_type() std::string MHAParser::mcomplex_mon_t::query_type (
 const std::string &) [protected], [virtual]

Reimplemented from **MHAParser::base_t** (p. 1085).

5.312.4 Member Data Documentation

5.312.4.1 data std::vector< std::vector< **mha_complex_t**> > MHAParser::mcomplex_mon_t::data

Data field.

The documentation for this class was generated from the following files:

- **mha_parser.hh**
- **mha_parser.cpp**

5.313 MHParse::mcomplex_t Class Reference

Matrix variable with complex value.

Inheritance diagram for MHParse::mcomplex_t:

Public Member Functions

- **mcomplex_t** (const std::string &, const std::string &, const std::string &="")

Public Attributes

- std::vector< std::vector< **mha_complex_t** > > **data**
Data field.

5.313.1 Detailed Description

Matrix variable with complex value.

5.313.2 Constructor & Destructor Documentation

5.313.2.1 mcomplex_t() MHAParser::mcomplex_t::mcomplex_t (
const std::string & *h*,
const std::string & *v*,
const std::string & *rg* = "")

5.313.3 Member Function Documentation

5.313.3.1 op_setval() std::string MHAParser::mcomplex_t::op_setval (
expression_t & *x*) [protected], [virtual]

Reimplemented from **MHAParser::variable_t** (p. 1166).

5.313.3.2 query_type() std::string MHAParser::mcomplex_t::query_type (
const std::string &) [protected], [virtual]

Reimplemented from **MHAParser::base_t** (p. 1085).

5.313.3.3 query_val() std::string MHAParser::mcomplex_t::query_val (
const std::string & *s*) [protected], [virtual]

Reimplemented from **MHAParser::base_t** (p. 1085).

5.313.4 Member Data Documentation

5.313.4.1 data `std::vector<std::vector< mha_complex_t > > MHAParser::mcomplex_t←
::data`

Data field.

The documentation for this class was generated from the following files:

- `mha_parser.hh`
- `mha_parser.cpp`

5.314 MHAParser::mfloat_mon_t Class Reference

Matrix of floats monitor.

Inheritance diagram for MHAParser::mfloat_mon_t:

Public Member Functions

- `mfloat_mon_t` (const std::string &hp)
Create a matrix of floating point monitor values.

Public Attributes

- `std::vector< std::vector< float > >` **data**
Data field.

Protected Member Functions

- `std::string` **query_val** (const `std::string` &)
- `std::string` **query_type** (const `std::string` &)

Additional Inherited Members

5.314.1 Detailed Description

Matrix of floats monitor.

5.314.2 Constructor & Destructor Documentation

5.314.2.1 mfloat_mon_t() `MHAParser::mfloat_mon_t::mfloat_mon_t (const std::string & hlp)`

Create a matrix of floating point monitor values.

Parameters

<i>hlp</i>	A help text describing this monitor variable.
------------	---

5.314.3 Member Function Documentation

5.314.3.1 query_val() `std::string MHAParser::mfloat_mon_t::query_val (const std::string & s) [protected], [virtual]`

Reimplemented from `MHAParser::base_t` (p. 1085).

5.314.3.2 query_type() `std::string MHAParser::mfloat_mon_t::query_type (const std::string &) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. 1085).

5.314.4 Member Data Documentation

5.314.4.1 data `std::vector< std::vector<float> > MHAParser::mfloat_mon_t::data`

Data field.

The documentation for this class was generated from the following files:

- **mha_parser.hh**
- **mha_parser.cpp**

5.315 MHAParser::mfloat_t Class Reference

Matrix variable with float value.

Inheritance diagram for MHAParser::mfloat_t:

Public Member Functions

- **mfloat_t** (const std::string &, const std::string &, const std::string &="")
Create a float matrix parser variable.

Public Attributes

- std::vector< std::vector< float > > **data**
Data field.

Protected Member Functions

- std::string **op_setval** (**expression_t** &)
- std::string **query_type** (const std::string &)
- std::string **query_val** (const std::string &)

Additional Inherited Members

5.315.1 Detailed Description

Matrix variable with float value.

5.315.2 Constructor & Destructor Documentation

5.315.2.1 mfloat_t() MHAParser::mfloat_t::mfloat_t (
 const std::string & *h*,
 const std::string & *v*,
 const std::string & *rg* = "")

Create a float matrix parser variable.

Parameters

<i>h</i>	A human-readable text describing the purpose of this configuration variable.
<i>v</i>	The initial value of the variable, as a string, in openMHA configuration language: (e.g. "[[0 1]; [2 3]]" for a matrix), described in the "Multidimensional Variables" s2.1.3 section of the openMHA User Manual.
<i>rg</i>	The numeric range to enforce on all members of the matrix.

5.315.3 Member Function Documentation

5.315.3.1 op_setval() `std::string MHAParser::mfloat_t::op_setval (expression_t & x) [protected], [virtual]`

Reimplemented from **MHAParser::variable_t** (p. 1166).

5.315.3.2 query_type() `std::string MHAParser::mfloat_t::query_type (const std::string &) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. 1085).

5.315.3.3 query_val() `std::string MHAParser::mfloat_t::query_val (const std::string & s) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. 1085).

5.315.4 Member Data Documentation

5.315.4.1 data `std::vector<std::vector<float> > MHAParser::mfloat_t::data`

Data field.

The documentation for this class was generated from the following files:

- **mha_parser.hh**
- **mha_parser.cpp**

5.316 MHAParser::mhaconfig_mon_t Class Reference

Inheritance diagram for MHAParser::mhaconfig_mon_t:

Public Member Functions

- **mhaconfig_mon_t** (const std::string & **help**="")
- void **update** (const **mhaconfig_t** &cf)

Private Attributes

- **MHAParser::int_mon_t channels**
Number of audio channels.
- **MHAParser::string_mon_t domain**
Signal domain (MHA_WAVEFORM or MHA_SPECTRUM)
- **MHAParser::int_mon_t fragsize**
Fragment size of waveform data.
- **MHAParser::int_mon_t wndlen**
Window length of spectral data.
- **MHAParser::int_mon_t fftlen**
FFT length of spectral data.
- **MHAParser::float_mon_t srate**
Sampling rate in Hz.

Additional Inherited Members

5.321.1 Detailed Description

Parser node class.

A **parser_t** (p. 1149) instance is a node in the configuration tree. A parser node can contain any number of other **parser_t** (p. 1149) instances or configuration language variables. These items are inserted into a parser node using the **parser_t::insert_item** (p. 1151) method.

5.321.2 Constructor & Destructor Documentation

5.321.2.1 parser_t() MHAParser::parser_t::parser_t (
 const std::string & *help_text* = "")

Construct detached node to be used in the configuration tree.

Parameters

<i>help_text</i>	A text describing this node. E.g. if this node lives at the root of some openMHA plugin, then the help text should describe the functionality of the plugin.
------------------	--

5.321.2.2 ~parser_t() MHAParser::parser_t::~~parser_t ()

5.321.3 Member Function Documentation

5.321.3.1 insert_item() void MHAParser::parser_t::insert_item (
 const std::string & *n*,
 MHAParser::base_t * *e*)

Register a parser item into this sub-parser.

This function registers an item under a given name into this sub-parser and makes it accessible to the parser interface.

Parameters

<i>n</i>	Name of the item in the configuration tree
<i>e</i>	C++ pointer to the item instance. <i>e</i> can either point to a variable, to a monitor, or to another sub-parser.

5.321.3.2 remove_item() [1/2] `void MHAParser::parser_t::remove_item (`
`const std::string & n)`

Remove an item by name.

If the item does not exist, an error is being reported.

Parameters

<i>n</i>	Name of parser item to be removed from list.
----------	--

5.321.3.3 force_remove_item() `void MHAParser::parser_t::force_remove_item (`
`const std::string & n)`

Remove an item by name.

Non-existing items are ignored.

Parameters

<i>n</i>	Name of parser item to be removed from list.
----------	--

5.321.3.4 remove_item() [2/2] `void MHAParser::parser_t::remove_item (`
`const base_t * addr)`

Remove an item by address.

The item belonging to an address is being removed from the list of items.

Parameters

<i>addr</i>	Address of parser item to be removed.
-------------	---------------------------------------

5.321.3.5 op_subparse() `std::string MHAParser::parser_t::op_subparse (`
`expression_t & x) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. 1083).

5.321.3.6 op_setval() `std::string MHAParser::parser_t::op_setval (expression_t & x) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. 1084).

5.321.3.7 op_query() `std::string MHAParser::parser_t::op_query (expression_t & x) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. 1084).

5.321.3.8 query_type() `std::string MHAParser::parser_t::query_type (const std::string &) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. 1085).

5.321.3.9 query_dump() `std::string MHAParser::parser_t::query_dump (const std::string &) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. 1084).

5.321.3.10 query_entries() `std::string MHAParser::parser_t::query_entries (const std::string &) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. 1084).

5.321.3.11 query_readfile() `std::string MHAParser::parser_t::query_readfile (const std::string & fname) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. [1085](#)).

5.321.3.12 query_savefile() `std::string MHAParser::parser_t::query_savefile (const std::string & fname) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. [1086](#)).

5.321.3.13 query_savefile_compact() `std::string MHAParser::parser_t::query_↔ savefile_compact (const std::string & fname) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. [1086](#)).

5.321.3.14 query_savemons() `std::string MHAParser::parser_t::query_savemons (const std::string & fname) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. [1086](#)).

5.321.3.15 query_val() `std::string MHAParser::parser_t::query_val (const std::string & s) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. [1085](#)).

5.321.3.16 query_listids() `std::string MHAParser::parser_t::query_listids (const std::string & s) [protected], [virtual]`

Reimplemented from **MHAParser::base_t** (p. [1086](#)).

5.321.3.17 set_id_string() void MHAParser::parser_t::set_id_string (const std::string & s) [protected]

5.321.3.18 has_entry() bool MHAParser::parser_t::has_entry (const std::string & s) [protected]

5.321.4 Member Data Documentation

5.321.4.1 entries entry_map_t MHAParser::parser_t::entries [private]

5.321.4.2 id_string std::string MHAParser::parser_t::id_string [private]

identification string

5.321.4.3 last_errormsg std::string MHAParser::parser_t::last_errormsg [private]

The documentation for this class was generated from the following files:

- mha_parser.hh
- mha_parser.cpp

5.322 MHAParser::range_var_t Class Reference

Base class for all variables with a numeric value range.

Inheritance diagram for MHAParser::range_var_t:

Public Member Functions

- **range_var_t** (const std::string &, const std::string &="")
- **range_var_t** (const **range_var_t** &)
- std::string **query_range** (const std::string &)
- void **set_range** (const std::string &)
Change the valid range of a variable.
- void **validate** (const int &)
- void **validate** (const float &)
- void **validate** (const **mha_complex_t** &)
- void **validate** (const std::vector< int > &)
- void **validate** (const std::vector< float > &)
- void **validate** (const std::vector< **mha_complex_t** > &)
- void **validate** (const std::vector< std::vector< int > > &)
- void **validate** (const std::vector< std::vector< float > > &)
- void **validate** (const std::vector< std::vector< **mha_complex_t** > > &)

Protected Attributes

- float **low_limit**
Lower limit of range.
- float **up_limit**
Upper limit of range.
- bool **low_incl**
Lower limit is included (or excluded) in range.
- bool **up_incl**
Upper limit is included (or excluded) in range.
- bool **check_low**
Check lower limit.
- bool **check_up**
Check upper limit.
- bool **check_range**
Range checking is active.

Additional Inherited Members

5.322.1 Detailed Description

Base class for all variables with a numeric value range.

5.322.2 Constructor & Destructor Documentation

5.322.2.1 range_var_t() [1/2] MHAParser::range_var_t::range_var_t (
const std::string & *h*,
const std::string & *r* = "")

5.322.2.2 range_var_t() [2/2] MHAParser::range_var_t::range_var_t (
const **range_var_t** & *src*)

5.322.3 Member Function Documentation

5.322.3.1 query_range() std::string MHAParser::range_var_t::query_range (
const std::string &) [virtual]

Reimplemented from **MHAParser::base_t** (p. [1085](#)).

5.322.3.2 set_range() void MHAParser::range_var_t::set_range (
const std::string & *r*)

Change the valid range of a variable.

Parameters

<i>r</i>	New range of the variable (string representation)
----------	---

5.322.3.3 validate() [1/9] void MHAParser::range_var_t::validate (
const int & *v*)

5.322.3.4 validate() [2/9] void MHAParser::range_var_t::validate (const float & v)

5.322.3.5 validate() [3/9] void MHAParser::range_var_t::validate (const **mha_complex_t** & v)

5.322.3.6 validate() [4/9] void MHAParser::range_var_t::validate (const std::vector< int > & v)

5.322.3.7 validate() [5/9] void MHAParser::range_var_t::validate (const std::vector< float > & v)

5.322.3.8 validate() [6/9] void MHAParser::range_var_t::validate (const std::vector< **mha_complex_t** > & v)

5.322.3.9 validate() [7/9] void MHAParser::range_var_t::validate (const std::vector< std::vector< int > > & v)

5.322.3.10 validate() [8/9] void MHAParser::range_var_t::validate (const std::vector< std::vector< float > > & v)

5.322.3.11 validate() [9/9] void MHAParser::range_var_t::validate (const std::vector< std::vector< **mha_complex_t** > > & v)

5.322.4 Member Data Documentation

5.322.4.1 low_limit float MHAParser::range_var_t::low_limit [protected]

Lower limit of range.

5.322.4.2 up_limit float MHAParser::range_var_t::up_limit [protected]

Upper limit of range.

5.322.4.3 low_incl bool MHAParser::range_var_t::low_incl [protected]

Lower limit is included (or excluded) in range.

5.322.4.4 up_incl bool MHAParser::range_var_t::up_incl [protected]

Upper limit is included (or excluded) in range.

5.322.4.5 check_low bool MHAParser::range_var_t::check_low [protected]

Check lower limit.

5.322.4.6 check_up bool MHAParser::range_var_t::check_up [protected]

Check upper limit.

5.322.4.7 `check_range` `bool MHAParser::range_var_t::check_range` [protected]

Range checking is active.

The documentation for this class was generated from the following files:

- `mha_parser.hh`
- `mha_parser.cpp`

5.323 `MHAParser::string_mon_t` Class Reference

Monitor with string value.

Inheritance diagram for `MHAParser::string_mon_t`:

Public Member Functions

- `string_mon_t` (`const std::string &hp`)
Create a monitor variable for string values.

Public Attributes

- `std::string data`
Data field.

Protected Member Functions

- `std::string query_val` (const `std::string` &)
- `std::string query_type` (const `std::string` &)

Additional Inherited Members

5.334.1 Detailed Description

MHA configuration interface for a window function generator.

This class implements a configuration interface (sub-parser) for window type selection and user-defined window type. It provides member functions to generate an instance of **MHAWindow::base_t** (p. 1338) based on the values provided by the configuration interface.

The configuration interface is derived from **MHAParser::parser_t** (p. 1149) and can thus be inserted into the configuration tree using the **insert_item()** (p. 1151) method of the parent parser.

If one of the pre-defined window types is used, then the window is generated using the **MHAWindow::fun_t** (p. 1342) class constructor; for the user-defined type the values from the "user" variable are copied.

5.336 MHAPlugin::cfg_node_t< runtime_cfg_t > Class Template Reference

A node class for storing MHA plugin runtime configurations as a singly linked list, where the nodes store besides the usual "next" and "data" pointers also a flag that indicates whether this node can be deleted.

Public Member Functions

- **cfg_node_t** (runtime_cfg_t *runtime_cfg)
Constructor for a singly linked list node.
- **~cfg_node_t** ()
Destructor of the singly linked list node.

Public Attributes

- std::atomic< **cfg_node_t**< runtime_cfg_t > * > **next**
A pointer to the next node in the singly linked list.
- std::atomic< bool > **not_in_use**
Initially this data member is set to false by the constructor.
- runtime_cfg_t * **data**
A native pointer to the runtime configuration managed by this node.

5.336.1 Detailed Description

```
template<class runtime_cfg_t>  
class MHAPlugin::cfg_node_t< runtime_cfg_t >
```

A node class for storing MHA plugin runtime configurations as a singly linked list, where the nodes store besides the usual "next" and "data" pointers also a flag that indicates whether this node can be deleted.

The singly linked list is designed for a single producer thread and a single consumer thread, where the producer is also responsible for destroying objects when they are no longer needed because the consumer is the signal processing thread that cannot afford memory allocation or deallocation operations.

5.336.2 Constructor & Destructor Documentation

```
5.336.2.1 cfg_node_t() template<class runtime_cfg_t >  
MHAPlugin::cfg_node_t< runtime_cfg_t >:: cfg_node_t (  
    runtime_cfg_t * runtime_cfg ) [explicit]
```

Constructor for a singly linked list node.

Parameters

<i>runtime_cfg</i>	Pointer to a runtime configuration object that was just created on the heap. The newly constructed cfg_node_t (p. 1190) object takes over object ownership of the pointed-to runtime configuration and will call delete on it in its destructor.
--------------------	---

5.336.2.2 `~cfg_node_t()` `template<class runtime_cfg_t >`
`MHAPugin::cfg_node_t< runtime_cfg_t >::~~ cfg_node_t`

Destructor of the singly linked list node.

Will also delete the pointed-to data object (the runtime configuration)

5.336.3 Member Data Documentation

5.336.3.1 `next` `template<class runtime_cfg_t >`
`std::atomic< cfg_node_t<runtime_cfg_t>*> MHAPugin::cfg_node_t< runtime_cfg_t >↔`
`::next`

A pointer to the next node in the singly linked list.

On construction, this will be a NULL pointer. New objects can be appended to the singly linked list by writing the address to the next node into this data member. Since this pointer is `std::atomic`, writing to it is a release operation which means all threads seeing the new value of the next pointer will also see all other writes to memory that the thread doing this write has performed, which includes anything the constructor of the new runtime config has written and the assignment of the address of the new runtime config to the data pointer of the next node. This prevents making half-constructed runtime configuration objects visible to the consumer thread.

5.336.3.2 `not_in_use` `template<class runtime_cfg_t >`
`std::atomic<bool> MHAPugin::cfg_node_t< runtime_cfg_t >::not_in_use`

Initially this data member is set to false by the constructor.

It is set to true by the consumer thread when it no longer needs the run time configuration pointed to by this node's data member. This bool is atomic because this node and the runtime object it points to can be deleted by the configuration thread as soon as value true is stored in this bool, which happens right after the processing thread acquires a pointer to the next node in the singly linked list. The atomic ensures all threads agree on this "right after" ordering.

```
5.336.3.3 data template<class runtime_cfg_t >
runtime_cfg_t* MHAPlugin::cfg_node_t< runtime_cfg_t >::data
```

A native pointer to the runtime configuration managed by this node.

The runtime configuration lives on the heap and is owned by this node. It is deleted in this node's destructor. The runtime configuration object must be created by client code with operator new before ownership is transferred to this node by passing a pointer to it as the constructor's parameter. This pointer does not need to be atomic, memory access ordering is ensured by the atomic next pointer and placing accesses to "data" in the correct places relative to accesses to "next".

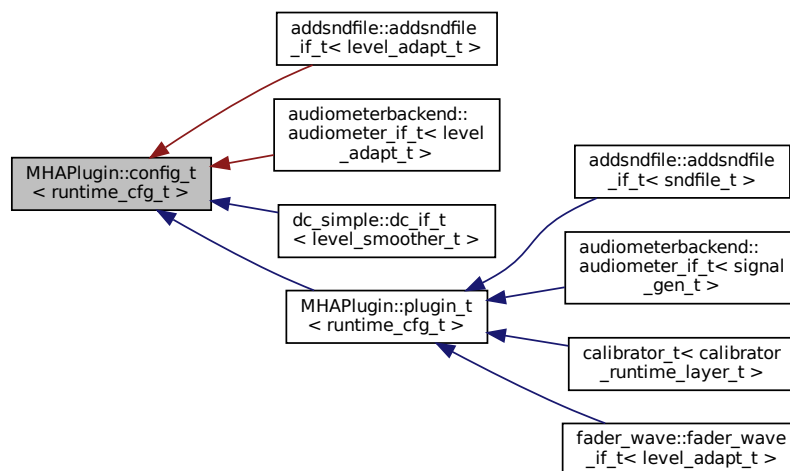

The documentation for this class was generated from the following file:

- mha_plugin.hh

5.337 MHAPlugin::config_t< runtime_cfg_t > Class Template Reference

Template class for thread safe configuration.

Inheritance diagram for MHAPlugin::config_t< runtime_cfg_t >:

Public Member Functions

- config_t ()
- ~config_t ()

Protected Member Functions

- `runtime_cfg_t * poll_config ()`
Receive the latest run time configuration.
- `runtime_cfg_t * peek_config () const`
Receive the latest run time configuration without changing the configuration pointer.
- `void push_config (runtime_cfg_t *ncfg)`
Push a new run time configuration into the configuration fifo.
- `void cleanup_unused_cfg ()`
To be called by the `push_config()` (p. 1197) for housekeeping.
- `void remove_all_cfg ()`
To be called on Plugin destruction, will delete all runtime configuration list nodes and objects regardless of their `in_use` flag.

Protected Attributes

- `runtime_cfg_t * cfg`
Pointer to the runtime configuration currently used by the signal processing thread.

Private Attributes

- `std::atomic< MHAPlugin::cfg_node_t< runtime_cfg_t > * > cfg_root`
Start of a singly linked list of runtime configuration objects.
- `MHAPlugin::cfg_node_t< runtime_cfg_t > * cfg_node_current`
Pointer to the currently used plugin runtime configurations.

5.337.1 Detailed Description

```
template<class runtime_cfg_t>
class MHAPlugin::config_t< runtime_cfg_t >
```

Template class for thread safe configuration.

This template class provides a mechanism for the handling of thread safe configuration which is required for run time configuration changes of the openMHA plugins.

The template parameter `runtime_cfg_t` is the run time configuration class of the openMHA plugin. The constructor of that class should transform the **MHAParser** (p. 123) variables into derived runtime configuration. The constructor should fail if the configuration is invalid by any reason.

A new runtime configuration is provided by the function `push_config()` (p. 1197). In the processing thread, the actual configuration can be received by a call of `poll_config()` (p. 1196).

Figure 5 Schematic drawing of runtime configuration update: configuration updated, but not used yet.

Figure 6 Schematic drawing of runtime configuration update: configuration in use.

To ensure lock-free thread safety, we use C++ atomics and rely on the C++ memory model. We only use store-release and load-acquire operations by using C++ atomics with the default memory ordering. The semantics of these are:

The store-release operation atomically writes to an atomic variable, while the load-acquire operation atomically reads from an atomic variable.

The C++ memory model guarantees that all previous writes to memory performed by the thread doing the store-release are visible to other threads when they see the new value in the shared atomic variable when that value is read by the other thread with a load-acquire operation.

An important precondition of this synchronization scheme is that there is only ever one audio thread and one configuration thread per plugin, i.e. there is only one thread doing the push_↔ config and one thread doing the poll_config for each instance of **config_t** (p. 1193).

For more details on atomics, refer to the C++11 or later documentation, or to these conference talks by Sutter:

- Atomic Weapons, 2012
- Lock-Free Programming, 2014

5.337.2 Constructor & Destructor Documentation

5.337.2.1 config_t() `template<class runtime_cfg_t >`
MHAPPlugin::config_t`< runtime_cfg_t >:: config_t`

5.337.2.2 ~config_t() `template<class runtime_cfg_t >`
MHAPPlugin::config_t`< runtime_cfg_t >::~~ config_t`

5.337.3 Member Function Documentation

5.337.3.1 poll_config() `template<class runtime_cfg_t >`
`runtime_cfg_t * MHAPPlugin::config_t``< runtime_cfg_t >::poll_config` [protected]

Receive the latest run time configuration.

This function stores the latest run time configuration into the protected class member variable 'cfg'. If no configuration exists, then an exception will be thrown. If no changes occurred, then the value of 'cfg' will be untouched.

This function should be only called from the *processing* thread.

Should be called at the start of each process() callback to get the latest runtime configuration.

When this function finds newer run time configurations, it returns the newest and ensures the older run time configurations have their `not_in_use` flag set to true.

Returns

Pointer to the latest runtime configuration object (same pointer as stored by this function in data member 'cfg').

Exceptions

<i>MHA_Error</i> (p. 818)	if the resulting runtime configuration is NULL. This usually means that no push_config has occurred.
---------------------------	--

5.337.3.2 peek_config() `template<class runtime_cfg_t >`
`runtime_cfg_t * MHAPLugin::config_t< runtime_cfg_t >::peek_config [protected]`

Receive the latest run time configuration without changing the configuration pointer.

This function retrieves the latest run time configuration. Returns a pointer to the latest runtime configuration without updating the data member `cfg`. For use in the configuration thread when creation of a new runtime configuration object needs access to the previously created runtime configuration object. Should normally not be used because it introduces synchronization requirements between configuration thread and signal processing thread.

5.337.3.3 push_config() `template<class runtime_cfg_t >`
`void MHAPLugin::config_t< runtime_cfg_t >::push_config (`
`runtime_cfg_t * ncfg) [protected]`

Push a new run time configuration into the configuration fifo.

Should be called only by the configuration thread when a new runtime configuration object has been constructed in response to configuration changes, or during execution of the `prepare()` method to ensure that there is a valid runtime configuration for the signal processing which can start after `prepare()` returns.

For housekeeping, this method will also delete any runtime configuration objects that have previously been passed to **push_config()** (p. 1197) if they are no longer needed.

Parameters

<i>ncfg</i>	A pointer to the new runtime configuration object. This object must have been created on the heap by the configuration thread with operator <code>new</code> . By passing the pointer to this method, client code gives up ownership. The object will be deleted in a future invocation of <code>push_config</code> , or on destruction of this config_t (p. 1193) instance.
-------------	---

5.337.3.4 cleanup_unused_cfg() `template<class runtime_cfg_t >`
`void MHAPLugin::config_t< runtime_cfg_t >::cleanup_unused_cfg [protected]`

To be called by the **push_config()** (p. 1197) for housekeeping.

Will delete any no longer used runtime configuration objects.

5.337.3.5 remove_all_cfg() `template<class runtime_cfg_t >`
`void MHAPlugin::config_t< runtime_cfg_t >::remove_all_cfg [protected]`

To be called on Plugin destruction, will delete all runtime configuration list nodes and objects regardless of their `in_use` flag.

5.337.4 Member Data Documentation

5.337.4.1 cfg `template<class runtime_cfg_t >`
`runtime_cfg_t* MHAPlugin::config_t< runtime_cfg_t >::cfg [protected]`

Pointer to the runtime configuration currently used by the signal processing thread.

Should be used to access the current runtime configuration during signal processing. This pointer is updated as a side effect of calling **poll_config()** (p. 1196) on this object.

5.337.4.2 cfg_root `template<class runtime_cfg_t >`
`std::atomic< MHAPlugin::cfg_node_t<runtime_cfg_t> *> MHAPlugin::config_t< runtime↔`
`_cfg_t >::cfg_root [private]`

Start of a singly linked list of runtime configuration objects.

`cfg_root` points to the oldest still existing node of that list. After object creation this pointer is updated by the configuration thread and then read by the signal processing thread. To ensure proper order of memory accesses for this transfer between threads, it needs to be atomic, this ensures that the start of the singly linked list of runtime configurations will be properly visible to the signal processing on startup.

5.337.4.3 cfg_node_current `template<class runtime_cfg_t >`
`MHAPlugin::cfg_node_t<runtime_cfg_t>* MHAPlugin::config_t< runtime_cfg_t >::cfg↔`
`node_current [private]`

Pointer to the currently used plugin runtime configurations.

Used as a hint for `poll_config` where to start looking for the newest node. This optimization allows `poll_config` to scale better with the number of nodes not yet cleaned up by `push_config`. Does not need to be atomic because it is only used within the signal processing thread.

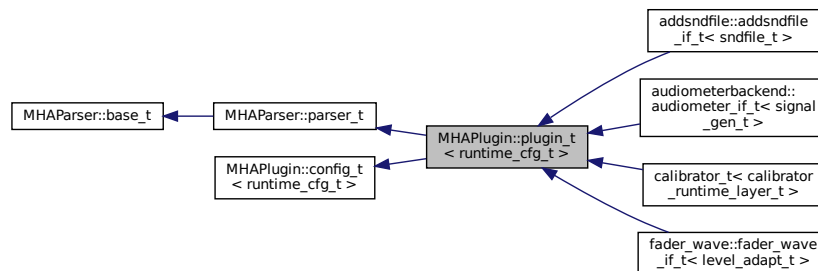

The documentation for this class was generated from the following file:

- **mha_plugin.hh**

5.338 MHAPlugin::plugin_t< runtime_cfg_t > Class Template Reference

The template class for C++ openMHA plugins.

Inheritance diagram for MHAPlugin::plugin_t< runtime_cfg_t >:

Public Member Functions

Additional Inherited Members

5.338.1 Detailed Description

```
template<class runtime_cfg_t>
class MHAPLugin::plugin_t< runtime_cfg_t >
```

The template class for C++ openMHA plugins.

Template Parameters

<i>runtime_↔ cfg_t</i>	run-time configuration.
----------------------------	-------------------------

This template class provides thread safe configuration handling and standard methods to be compatible to the C++ openMHA plugin wrapper macro **MHAPLUGIN_CALLBACKS** (p. 1695).

The template parameter `runtime_cfg_t` should be the runtime configuration of the plugin.

See **MHAPLugin::config_t** (p. 1193) for details on the thread safe communication update mechanism.

5.338.2 Constructor & Destructor Documentation

```
5.338.2.1 plugin_t() template<class runtime_cfg_t >
MHAPLugin::plugin_t< runtime_cfg_t >:: plugin_t (
    const std::string & help,
    MHA_AC::algo_comm_t & iac )
```

Constructor of plugin template base class.

Plugin classes inherit from `MHAPLugin::plugin_t<>` and will call this base class constructor in their constructor's initialization list.

The constructor of a plugin is called each time a plugin is loaded into MHA: Multiple instances of the same plugin can be loaded and for each plugin instance, a new instance of the plugin class will be created.

Parameters

<i>help</i>	Short help text that provides some general information about the plugin. This text is returned in response to configuration language query command "?help".
<i>iac</i>	AC space handle (will be stored into the member variable ac).

5.338.2.2 ~plugin_t() template<class runtime_cfg_t >

MHAPlugin::plugin_t< runtime_cfg_t >::~~ plugin_t [virtual]

Destructor of plugin template base class.

Plugin class instances are deleted and the destructor of the instance is called when unloading a plugin instance from the MHA. Typically this happens just before the MHA process terminates, e.g. in response to cmd=quit, but some plugins also have the capability of replacing loaded plugins during runtime of the MHA, in which case the destructor of the active instances is called before the unloading.

In some exceptional cases, e.g. when an error occurs during initializing the MHA, the MHA process may terminate without ever calling the destructors of all existing plugin instances.

5.338.3 Member Function Documentation

5.338.3.3 prepare_() `template<class runtime_cfg_t >`
`void MHAPLugin::plugin_t< runtime_cfg_t >::prepare_ (`
`mhaconfig_t & cf)`

5.338.3.4 release_() `template<class runtime_cfg_t >`
`void MHAPLugin::plugin_t< runtime_cfg_t >::release_`

5.338.3.5 is_prepared() `template<class runtime_cfg_t >`
`bool MHAPLugin::plugin_t< runtime_cfg_t >::is_prepared () const [inline]`

Flag, if the prepare method is successfully called (or currently evaluated)

5.338.3.6 input_cfg() `template<class runtime_cfg_t >`
`mhaconfig_t MHAPLugin::plugin_t< runtime_cfg_t >::input_cfg () const [inline]`

Current input channel configuration.

5.338.3.7 output_cfg() `template<class runtime_cfg_t >`
`mhaconfig_t MHAPLugin::plugin_t< runtime_cfg_t >::output_cfg () const [inline]`

Current output channel configuration.

5.338.4 Member Data Documentation

5.338.4.1 tftype `template<class runtime_cfg_t >`
`mhaconfig_t MHAPlugin::plugin_t< runtime_cfg_t >::tftype [protected]`

Member for storage of plugin interface configuration.

This member is defined for convenience of the developer. Typically, the actual contents of **mhaconfig_t** (p. 905) are stored in this member in the **prepare()** (p. 1201) method.

Note

This member is likely to be removed in later versions, use **input_cfg()** (p. 1203) and **output_cfg()** (p. 1203) instead.

5.338.4.2 ac `template<class runtime_cfg_t >`
`MHA_AC::algo_comm_t& MHAPlugin::plugin_t< runtime_cfg_t >::ac [protected]`

AC handle of the chain.

This variable is initialized in the constructor and can be used by derived plugins to access the AC space. Its contents should not be modified.

5.338.4.3 is_prepared_ `template<class runtime_cfg_t >`
`bool MHAPlugin::plugin_t< runtime_cfg_t >::is_prepared_ [private]`

5.338.4.4 input_cfg_ `template<class runtime_cfg_t >`
`mhaconfig_t MHAPlugin::plugin_t< runtime_cfg_t >::input_cfg_ [private]`

5.338.4.5 output_cfg_ `template<class runtime_cfg_t >`
`mhaconfig_t MHAPlugin::plugin_t< runtime_cfg_t >::output_cfg_ [private]`

5.338.4.6 mhaconfig_in `template<class runtime_cfg_t >`
`MHAParser::mhaconfig_mon_t MHAPlugin::plugin_t< runtime_cfg_t >::mhaconfig_in [private]`

5.339 MHAPlugin_Resampling::resampling_if_t Class Reference 205

5.338.4.7 mhaconfig_out `template<class runtime_cfg_t >`

5.341 MHAPLugin_Split::domain_handler_t Class Reference

Handles domain-specific partial input and output signal.

Inheritance diagram for MHAPLugin_Split::domain_handler_t:

Public Member Functions

- void **set_input_domain** (const **mhaconfig_t** &settings_in)
Set parameters of input signal.
- void **set_output_domain** (const **mhaconfig_t** &settings_out)
Set output signal parameters.
- void **deallocate_domains** ()
Deallocate domain indicators and signal holders.
- **domain_handler_t** (const **mhaconfig_t** &settings_in, const **mhaconfig_t** &settings_out, **PluginLoader::fourway_processor_t** * processor)
Construct a new domain handler once the domains and dimensions of input and output signal of one of the child plugins of split are known.
- virtual ~**domain_handler_t** ()
Deallocation of signal holders.
- unsigned **put_signal** (**mha_wave_t** *s_in, unsigned start_channel)
Store the relevant channels from the input signal for processing.
- unsigned **put_signal** (**mha_spec_t** *s_in, unsigned start_channel)
Store the relevant channels from the input signal for processing.
- unsigned **get_signal** (**MHASignal::waveform_t** *s_out, unsigned start_channel)
Store all partial signal output channels in the combined waveform signal with the given channel offset.
- unsigned **get_signal** (**MHASignal::spectrum_t** *s_out, unsigned start_channel)
Store all partial signal output channels in the combined spectrum signal with the given channel offset.
- void **process** ()
Call the processing method of the processor with configured input/output signal domains.

Public Attributes

- **MHASignal::waveform_t** * **wave_in**
Partial wave input signal.
- **mha_wave_t** ** **wave_out**
Partial wave output signal.
- **MHASignal::spectrum_t** * **spec_in**
Partial spec input signal.
- **mha_spec_t** ** **spec_out**
Partial spec input signal.
- **PluginLoader::fourway_processor_t** * **processor**
The domain-specific signal processing methods are implemented here.

Private Member Functions

- **domain_handler_t** (const **domain_handler_t** &)
Disallow copy constructor.
- **domain_handler_t** & **operator=** (const **domain_handler_t** &)
Disallow assignment operator.

5.341.1 Detailed Description

Handles domain-specific partial input and output signal.

5.341.2 Constructor & Destructor Documentation

5.341.2.1 domain_handler_t() [1/2] MHAPlugin_Split::domain_handler_t::domain_↔
handler_t (
 const **domain_handler_t** &) [private]

Disallow copy constructor.

5.341.2.2 domain_handler_t() [2/2] MHAPlugin_Split::domain_handler_t::domain_↔
handler_t (
 const **mhaconfig_t** & *settings_in*,
 const **mhaconfig_t** & *settings_out*,
 PluginLoader::fourway_processor_t * *processor*) [inline]

Construct a new domain handler once the domains and dimensions of input and output signal of one of the child plugins of split are known.

5.341.2.3 ~domain_handler_t() virtual MHAPlugin_Split::domain_handler_t::~~domain_↔
_handler_t () [inline], [virtual]

Deallocation of signal holders.

5.341.3 Member Function Documentation

5.341.3.1 operator=() **domain_handler_t**& MHAPlugin_Split::domain_handler_t::operator=
(
 const **domain_handler_t** &) [private]

Disallow assignment operator.

5.341.3.2 set_input_domain() void MHAPlugin_Split::domain_handler_t::set_input_↔
domain (
 const **mhaconfig_t** & *settings_in*) [inline]

Set parameters of input signal.

Parameters

<i>settings_↔ _in</i>	domain and dimensions of partial input signal
---------------------------	---

5.341.3.3 set_output_domain() void MHAPlugin_Split::domain_handler_t::set_output↔
_domain (
 const **mhaconfig_t** & *settings_out*) [inline]

Set output signal parameters.

Parameters

<i>settings_out</i>	domain and dimensions of partial output signal
---------------------	--

5.341.3.4 deallocate_domains() void MHAPlugin_Split::domain_handler_t::deallocate↔
_domains () [inline]

Deallocate domain indicators and signal holders.

5.341.3.5 put_signal() [1/2] unsigned MHAPlugin_Split::domain_handler_t::put_signal
(
 mha_wave_t * *s_in*,
 unsigned *start_channel*) [inline]

Store the relevant channels from the input signal for processing.

The number of channels to store is taken from the dimensions of the partial input signal holder **wave_in** (p. 1215).

Parameters

<i>s_in</i>	The combined waveform input signal.
<i>start_channel</i>	The index (0-based) of the first channel in <i>s_in</i> to be copied to the partial input signal.

Returns

The number of channels that were copied from the input signal

5.341.3.6 put_signal() [2/2] unsigned MHAPlugin_Split::domain_handler_t::put_signal
(
 mha_spec_t * *s_in*,
 unsigned *start_channel*) [inline]

Store the relevant channels from the input signal for processing.

The number of channels to store is taken from the dimensions of the partial input signal holder **spec_in** (p. 1216).

Parameters

<i>s_in</i>	The combined spectrum input signal.
<i>start_channel</i>	The index (0-based) of the first channel in <i>s_in</i> to be copied to the partial input signal.

Returns

The number of channels that were copied from the input signal

5.341.3.7 get_signal() [1/2] unsigned MHAPlugin_Split::domain_handler_t::get_signal
(
 MHASignal::waveform_t * *s_out*,
 unsigned *start_channel*) [inline]

Store all partial signal output channels in the combined waveform signal with the given channel offset.

All channels present in **wave_out** (p. 1216) will be copied. Caller may use (**wave_out*)->num↔_channels to check the number of channels in advance.

Parameters

<i>s_out</i>	The combined waveform output signal.
<i>start_channel</i>	The channel offset (0-based) in <i>s_out</i> .

Returns

The number of channels that were copied to the output signal

5.341.3.8 get_signal() [2/2] unsigned MHAPugin_Split::domain_handler_t::get_signal
(
 MHASignal::spectrum_t * s_out,
 unsigned start_channel) [inline]

Store all partial signal output channels in the combined spectrum signal with the given channel offset.

All channels present in **spec_out** (p. 1216) will be copied. Caller may use (*spec_out)->num←_channels to check the number of channels in advance.

Parameters

<i>s_out</i>	The combined spectrum output signal.
<i>start_channel</i>	The channel offset (0-based) in s_out.

Returns

The number of channels that were copied to the output signal

5.341.3.9 process() void MHAPugin_Split::domain_handler_t::process () [inline],
[virtual]

Call the processing method of the processor with configured input/output signal domains.

The input signal has to be stored using **put_signal** (p. 1213) before this method may be called.

Implements **MHAPugin_Split::uni_processor_t** (p. 1239).

5.341.4 Member Data Documentation

5.341.4.1 wave_in `MHASignal::waveform_t*` `MHAPugin_Split::domain_handler_t::wave↔
_in`

Partial wave input signal.

5.341.4.2 wave_out `mha_wave_t**` `MHAPugin_Split::domain_handler_t::wave_out`

Partial wave output signal.

5.341.4.3 spec_in `MHASignal::spectrum_t*` `MHAPugin_Split::domain_handler_t::spec↔
_in`

Partial spec input signal.

5.341.4.4 spec_out `mha_spec_t**` `MHAPugin_Split::domain_handler_t::spec_out`

Partial spec input signal.

5.341.4.5 processor `PluginLoader::fourway_processor_t*` `MHAPugin_Split::domain_↔
handler_t::processor`

The domain-specific signal processing methods are implemented here.

Dummy specification of a thread platform: This class implements everything in a single thread.

5.342.2 Constructor & Destructor Documentation

5.342.2.1 dummy_threads_t() MHAPlugin_Split::dummy_threads_t::dummy_threads_t (**uni_processor_t** * proc, const std::string & thread_scheduler, int thread_priority) [inline]

Constructor.

Parameters

<i>proc</i>	Pointer to the associated plugin loader
<i>thread_scheduler</i>	Unused in dummy thread platform
<i>thread_priority</i>	Unused in dummy thread platform

5.342.3 Member Function Documentation

5.342.3.1 kick_thread() `void MHAPlugin_Split::dummy_threads_t::kick_thread () [inline], [virtual]`

perform signal processing immediately (no multiple threads in this dummy class)

Implements **MHAPlugin_Split::thread_platform_t** (p. 1237).

5.342.3.2 catch_thread() `void MHAPlugin_Split::dummy_threads_t::catch_thread () [inline], [virtual]`

No implementation needed: Processing has been completed during `ummy_threads_t::kick_↔thread`.

Implements **MHAPlugin_Split::thread_platform_t** (p. 1237).

The documentation for this class was generated from the following file:

- **split.cpp**

5.343 MHAPlugin_Split::posix_threads_t Class Reference

Posix threads specification of thread platform.

Inheritance diagram for `MHAPlugin_Split::posix_threads_t`:

Public Member Functions

- void **kick_thread** ()
Start signal processing in separate thread.
- void **catch_thread** ()
Wait for signal processing to finish.
- **posix_threads_t** (**uni_processor_t** *proc, const std::string &thread_scheduler, int thread_priority)
Constructor.
- ~**posix_threads_t** ()
Terminate thread.
- void **main** ()
Thread main loop. Wait for process/termination trigger, then act.

Static Public Member Functions

- static void * **thread_start** (void *thr)
Thread start function.
- static std::string **current_thread_scheduler** ()
- static int **current_thread_priority** ()

Private Attributes

- pthread_mutex_t **mutex**
The mutex.
- pthread_cond_t **kick_condition**
The condition for signalling the kicking and termination.
- pthread_cond_t **catch_condition**
The condition for signalling the processing is finished.
- pthread_attr_t **attr**
Thread attributes.
- struct sched_param **priority**
Thread scheduling priority.
- int **scheduler**
- pthread_t **thread**
The thread object.
- bool **kicked**
A flag that is set to true by kick_thread and to false by the thread after it has woken up from the kicking.
- bool **processing_done**
A flag that is set to true by the thread when it returns from processing and to false by catch_thread after it has waited for that return.
- bool **termination_request**
Set to true by the destructor.

5.343.1 Detailed Description

Posix threads specification of thread platform.

5.343.2 Constructor & Destructor Documentation

5.343.2.1 `posix_threads_t()` `MHAPPlugin_Split::posix_threads_t::posix_threads_t (
 uni_processor_t * proc,
 const std::string & thread_scheduler,
 int thread_priority) [inline]`

Constructor.

Parameters

<i>proc</i>	Pointer to the associated signal processor instance
<i>thread_scheduler</i>	A string describing the posix thread scheduler. Possible values: "SCHED_OTHER", "SCHED_RR", "SCHED_FIFO".
<i>thread_priority</i>	The scheduling priority of the new thread.

5.343.2.2 `~posix_threads_t()` `MHAPPlugin_Split::posix_threads_t::~~posix_threads_t (
) [inline]`

Terminate thread.

5.343.3 Member Function Documentation

5.343.3.1 `kick_thread()` `void MHAPPlugin_Split::posix_threads_t::kick_thread () [inline],
 [virtual]`

Start signal processing in separate thread.

Implements `MHAPPlugin_Split::thread_platform_t` (p. [1237](#)).

5.343.3.2 catch_thread() `void MHAPugin_Split::posix_threads_t::catch_thread ()`
[inline], [virtual]

Wait for signal processing to finish.

Implements **MHAPugin_Split::thread_platform_t** (p. 1237).

5.343.3.3 thread_start() `static void* MHAPugin_Split::posix_threads_t::thread_start`
(
 `void * thr`) [inline], [static]

Thread start function.

5.343.3.4 main() `void MHAPugin_Split::posix_threads_t::main ()` [inline]

Thread main loop. Wait for process/termination trigger, then act.

5.343.3.5 current_thread_scheduler() `static std::string MHAPugin_Split::posix_↔`
`threads_t::current_thread_scheduler ()` [inline], [static]

5.344.1 Detailed Description

Implements split plugin.

An instance of class **split_t** (p. 1223) implements the split plugin functionality: The audio channels are splitted and groups of audio channels are processed by different plugins in parallel.

5.344.2 Constructor & Destructor Documentation

5.344.2.1 split_t() `MHAPLugin_Split::split_t::split_t (MHA_AC::algo_comm_t & iac, const std::string & configured_name)`

Plugin constructor.

5.344.2.2 ~split_t() `MHAPLugin_Split::split_t::~~split_t ()`

Plugin destructor. Unloads nested plugins.

5.344.3 Member Function Documentation

5.344.3.1 prepare_() `void MHAPugin_Split::split_t::prepare_ (mhaconfig_t & signal_parameters)`

Check signal parameters, prepare chains, and allocate output signal holders.

5.344.3.2 release_() `void MHAPugin_Split::split_t::release_ ()`

Delete output signal holder and release chains.

5.344.3.3 process() `template<class SigTypeIn , class SigTypeOut > void MHAPugin_Split::split_t::process (SigTypeIn * s_in, SigTypeOut ** s_out)`

Let the parallel plugins process channel groups of the input signal.

5.344.3.4 update() `void MHAPugin_Split::split_t::update () [private]`

Load plugins in response to a value change in the algos variable.

5.344.3.5 clear_chains() `void MHAPugin_Split::split_t::clear_chains () [private]`

Unload the plugins.

5.344.3.6 copy_output_wave() `mha_wave_t* MHAPugin_Split::split_t::copy_output_↔ wave () [private]`

5.344.3.7 copy_output_spec() `mha_spec_t*` MHAPlugin_Split::split_t::copy_output_spec () [private]

5.344.3.8 trigger_processing() `template<class SigType >`
`void MHAPlugin_Split::split_t::trigger_processing (`
`SigType * s_in) [private]`

Split the argument input signal to groups of channels for the plugins and initiate signal processing.

5.344.3.9 collect_result() `template<class SigType >`
`void MHAPlugin_Split::split_t::collect_result (`
`SigType * s_out) [private]`

Combine the output signal from the plugins.

5.344.3.10 signal_out() [1/2] `MHASignal::waveform_t*` MHAPlugin_Split::split_t::signal_out (`mha_wave_t **`) [inline], [private]

Waveform domain output signal structure accessor.

Parameter is only for domain disambiguation and is ignored.

5.344.3.11 signal_out() [2/2] `MHASignal::spectrum_t*` MHAPlugin_Split::split_t::signal_out (`mha_spec_t **`) [inline], [private]

Spectrum domain output signal structure. Parameter is ignored.

5.344.4 Member Data Documentation

5.344.4.1 patchbay `MHAEvents::patchbay_t< split_t> MHAPugin_Split::split_t↔
::patchbay [private]`

Reload plugins when the algos variable changes.

5.344.4.2 algos `MHAParser::vstring_t MHAPugin_Split::split_t::algos [private]`

Vector of plugins to load in parallel.

5.344.4.3 channels `MHAParser::vint_t MHAPugin_Split::split_t::channels [private]`

Number of channels to route through each plugin.

5.344.4.4 thread_platform `MHAParser::kw_t MHAPugin_Split::split_t::thread_↔
platform [private]`

Thread platform chooser.

5.344.4.5 worker_thread_scheduler `MHAParser::kw_t MHAPugin_Split::split_t↔
::worker_thread_scheduler [private]`

Scheduler used for worker threads.

5.344.4.6 worker_thread_priority `MHAParser::int_t MHAPugin_Split::split_t::worker_↔
_thread_priority [private]`

Priority of worker threads.

5.344.4.7 framework_thread_scheduler `MHAParser::string_mon_t MHAPugin_Split::split_t::framework_thread_scheduler [private]`

Scheduler of the signal processing thread.

5.344.4.8 framework_thread_priority `MHAParser::int_mon_t MHAPugin_Split::split_t::framework_thread_priority [private]`

Priority of signal processing thread.

5.344.4.9 delay `MHAParser::bool_t MHAPugin_Split::split_t::delay [private]`

Switch to activate parallel processing of plugins at the cost of one block of additional delay.

5.344.4.10 chains `std::vector< splitted_part_t* > MHAPugin_Split::split_t::chains [private]`

Interfaces to parallel plugins.

5.344.4.11 wave_out `MHASignal::waveform_t* MHAPugin_Split::split_t::wave_out [private]`

Combined output waveforms structure.

5.344.4.12 spec_out `MHASignal::spectrum_t* MHAPugin_Split::split_t::spec_out [private]`

Combined output spectra structure.

The domain specific signal handler, allocated from prepare when input and output domains and signal parameters are known.
- **thread_platform_t** * **thread**
The platform-dependent thread synchronization implementation.

5.345.1 Detailed Description

The **splitted_part_t** (p. 1230) instance manages the plugin that performs processing on the reduced set of channels.

The signal is split by channels by this instance, but the signal is combined again by the calling class.

5.345.2 Constructor & Destructor Documentation

5.345.2.1 splitted_part_t() [1/3] MHAPlugin_Split::splitted_part_t::splitted_part_t (const **splitted_part_t** &) [private]

Disallow copy constructor.

5.345.2.2 splitted_part_t() [2/3] MHAPlugin_Split::splitted_part_t::splitted_part_t (const std::string & *plugname*, **MHAParser::parser_t** * *parent*)

Load the plugin for this partial signal path.

Loads the MHA plugin for a signal path of these audio channels.

Parameters

<i>pluginame</i>	The name of the MHA plugin, optionally followed by a colon and the algorithm name.
<i>parent</i>	The parser node where the configuration of the new plugin is inserted. The plugin's parser name is the configured name (colon syntax).

5.345.2.3 **splitted_part_t()** [3/3] `MHAPlugin_Split::splitted_part_t::splitted_part_t (PluginLoader::fourway_processor_t * plugin)`

Create the handler for the partial signal.

The plugin is loaded by the caller, but it will be deleted by the destructor of this class. This constructor exists solely for testing purposes.

Parameters

<i>plugin</i>	The plugin used for processing the signal. The new splitted_part_t (p. 1231) instance will take ownership of this instance and release it in the destructor.
---------------	---

5.345.2.4 **~splitted_part_t()** `MHAPlugin_Split::splitted_part_t::~~splitted_part_t ()` `throw ()`

Destructor. Deletes the plugin **plug** (p. 1234).

5.345.3 Member Function Documentation

5.345.3.1 **operator=()** `splitted_part_t& MHAPlugin_Split::splitted_part_t::operator= (const splitted_part_t &) [private]`

Disallow assignment operator.

5.345.3.2 prepare() `void MHAPlugin_Split::splitted_part_t::prepare (mhaconfig_t & signal_parameters, const std::string & thread_platform, const std::string & thread_scheduler, int thread_priority)`

Delegates the prepare method to the plugin and allocates a suitable **MHAPlugin_Split::domain_handler_t** (p. 1210) instance.

Prepare the loaded plugin.

Plugin preparation.

Parameters

<i>signal_parameters</i>	The signal description parameters for this path.
<i>thread_platform</i>	The name of the thread platform to use. Possible values: "posix", "win32", "dummy".
<i>thread_scheduler</i>	The name of the scheduler to use. Posix threads support "SCHED_OTHER", "SCHED_RR", "SCHED_FIFO". The other thread platforms do not support different thread schedulers. This value is not used for platforms other than "posix".
<i>thread_priority</i>	The new thread priority. Interpretation and permitted range depend on the thread platform and possibly on the scheduler.

5.345.3.3 release() `void MHAPlugin_Split::splitted_part_t::release ()`

Delegates the release method to the plugin and deletes the **MHAPlugin_Split::domain_handler_t** (p. 1210) instance.

Release the loaded plugin.

Plugin release.

5.345.3.4 parse() `std::string MHAPlugin_Split::splitted_part_t::parse (const std::string & str) [inline]`

Delegates parser invocation to plugin.

5.345.3.5 trigger_processing() `template<class SigType > unsigned MHAPlugin_Split::splitted_part_t::trigger_processing (SigType * s_in, unsigned start_channel) [inline]`

The domain handler copies the input signal channels.

Then, processing is initiated.

Parameters

<i>s_in</i>	The combined input signal.
<i>start_channel</i>	The index (0-based) of the first channel in <i>s_in</i> to be copied to the partial input signal.

Returns

The number of channels that were copied from the input signal

```
5.345.3.6 collect_result() template<class SigType >
unsigned MHAPugin_Split::splitted_part_t::collect_result (
    SigType * s_out,
    unsigned start_channel ) [inline]
```

Wait until processing is finished, then copy the output data.

Parameters

<i>s_out</i>	The combined waveform output signal.
<i>start_channel</i>	The channel offset (0-based) in <i>s_out</i> .

Returns

The number of channels that were copied to the output signal

5.345.4 Member Data Documentation

```
5.345.4.1 plug PluginLoader::fourway_processor_t* MHAPugin_Split::splitted_part↔
_t::plug [private]
```

The plugin that performs the signal processing on the prepared channels.

5.345.4.2 domain `domain_handler_t*` MHAPlugin_Split::splitted_part_t::domain [private]

The domain specific signal handler, allocated from prepare when input and output domains and signal parameters are known.

5.345.4.3 thread `thread_platform_t*` MHAPlugin_Split::splitted_part_t::thread [private]

The platform-dependent thread synchronization implementation.

The documentation for this class was generated from the following file:

- **split.cpp**

5.346 MHAPlugin_Split::thread_platform_t Class Reference

Basic interface for encapsulating thread creation, thread priority setting, and synchronization on any threading platform (i.e., pthreads or win32threads).

Inheritance diagram for MHAPlugin_Split::thread_platform_t:

**Public Member Functions**

- **thread_platform_t** (`uni_processor_t` *proc)
Constructor.
- virtual **~thread_platform_t** ()
Make derived classes destructable via pointer to this base class.
- virtual void **kick_thread** ()=0
Derived classes notify their processing thread that it should call processor->process().
- virtual void **catch_thread** ()=0
Derived classes wait for their signal processing thread to return from the call to part->process().

Protected Attributes

- **uni_processor_t * processor**

A pointer to the plugin loader that processes the sound data in the channels for which this thread was created.

Private Member Functions

- **thread_platform_t** (const **thread_platform_t** &)

Disallow copy constructor.

- **thread_platform_t & operator=** (const **thread_platform_t** &)

Disallow assignment operator.

5.346.1 Detailed Description

Basic interface for encapsulating thread creation, thread priority setting, and synchronization on any threading platform (i.e., pthreads or win32threads).

Derived classes specialize in the actual thread platform.

5.346.2 Constructor & Destructor Documentation

5.346.2.1 thread_platform_t() [1/2] MHAPugin_Split::thread_platform_t::thread_↔
platform_t (
 const **thread_platform_t** &) [private]

Disallow copy constructor.

5.346.2.2 thread_platform_t() [2/2] MHAPugin_Split::thread_platform_t::thread_↔
platform_t (
 uni_processor_t * proc) [inline]

Constructor.

Derived classes create the thread in the constructor.

Parameters

<i>proc</i>	Pointer to the associated plugin loader. This plugin loader has to live at least as long as this instance. This instance does not take possession of the plugin loader. In production code, this thread platform and the plugin loader are both created and destroyed by the MHAPlugin_Split::splitted_part_t (p. 1230) instance.
-------------	--

5.346.2.3 `~thread_platform_t()` `virtual MHAPlugin_Split::thread_platform_t::~~thread_platform_t () [inline], [virtual]`

Make derived classes destructable via pointer to this base class.

Derived classes' destructors notify the thread that it should terminate itself, and wait for the termination to occur.

5.346.3 Member Function Documentation

5.346.3.1 `operator=()` `thread_platform_t& MHAPlugin_Split::thread_platform_t::operator=(const thread_platform_t &) [private]`

Disallow assignment operator.

5.346.3.2 `kick_thread()` `virtual void MHAPlugin_Split::thread_platform_t::kick_thread () [pure virtual]`

Derived classes notify their processing thread that it should call `processor->process()`.

Implemented in **MHAPlugin_Split::posix_threads_t** (p. 1220), and **MHAPlugin_Split::dummy_threads_t** (p. 1218).

5.346.3.3 catch_thread() `virtual void MHAPlugin_Split::thread_platform_t::catch_thread () [pure virtual]`

Derived classes wait for their signal processing thread to return from the call to `part->process()`.

Implemented in **MHAPlugin_Split::posix_threads_t** (p. 1220), and **MHAPlugin_Split::dummy_threads_t** (p. 1218).

5.346.4 Member Data Documentation

5.346.4.1 processor `uni_processor_t* MHAPlugin_Split::thread_platform_t::processor [protected]`

A pointer to the plugin loader that processes the sound data in the channels for which this thread was created.

Using the **MHAPlugin_Split::uni_processor_t** (p. 1238) interface instead of the `mhaplugin-loader` class directly for testability (no need to load real plugins for testing the thread platform).

The documentation for this class was generated from the following file:

- **split.cpp**

5.347 MHAPlugin_Split::uni_processor_t Class Reference

An interface to a class that sports a process method with no parameters and no return value.

Inheritance diagram for `MHAPlugin_Split::uni_processor_t`:

Public Member Functions

- virtual void **process** ()=0

This method uses some input signal, performs processing and stores the output signal somewhere.

- virtual **~uni_processor_t** ()

Classes containing virtual methods need virtual destructors.

5.347.1 Detailed Description

An interface to a class that sports a process method with no parameters and no return value.

No signal transfer occurs through this interface, because the signal transfer is performed in another thread than the processing.

5.347.2 Constructor & Destructor Documentation

5.347.2.1 ~uni_processor_t() virtual MHAPlugin_Split::uni_processor_t::~~uni_processor_t () [inline], [virtual]

Classes containing virtual methods need virtual destructors.

5.347.3 Member Function Documentation

5.347.3.1 process() virtual void MHAPlugin_Split::uni_processor_t::process () [pure virtual]

This method uses some input signal, performs processing and stores the output signal somewhere.

This method also has to dispatch the process call based on the configured domains.

Signal transfer and domain configuration have to be done in derived class in different methods.

Implemented in **MHAPlugin_Split::domain_handler_t** (p. 1215).

The documentation for this class was generated from the following file:

- **split.cpp**

5.348 mhaserver_t Class Reference

MHA Framework listening on TCP port for commands.

Inheritance diagram for mhaserver_t:

Classes

- class `tcp_server_t`

Public Member Functions

- `mhaserver_t` (const std::string &ao, const std::string &af, const std::string &lf, bool b__↔ interactive_)
- `~mhaserver_t` ()
- virtual std::string `on_received_line` (const std::string &line)
A line of text was received from network client.
- virtual void `acceptor_started` ()
Notification: "TCP port is open".
- virtual void `send_port_announcement` ()
sends an announcement which port this MHA is listening on to the creator of the process.
- virtual void `start_stdin_thread` ()
Starts a separate thread that reads lines from stdin and forwards these lines over TCP to the MHA configuration thread which multiplexes multiple TCP connections.

- virtual void **set_announce_port** (unsigned short **announce_port**)
If set to nonzero, the spawning process has asked to be notified of the TCP port used by this process.
- void **logstring** (const std::string &)
Log a message to log file.
- int **run** (unsigned short **port**, const std::string &_interface)
Accept network connections and act on commands.

Public Attributes

- **MHAParser::int_t port**

Private Attributes

- std::shared_ptr< **tcp_server_t** > **tcpserver**
- std::string **ack_ok**
- std::string **ack_fail**
- std::string **logfile**
- unsigned short **announce_port**
- bool **b_interactive**
- **MHAParser::int_mon_t pid_mon**

Additional Inherited Members

5.348.1 Detailed Description

MHA Framework listening on TCP port for commands.

5.348.2 Constructor & Destructor Documentation

5.348.2.1 mhaserver_t() `mhaserver_t::mhaserver_t (`
 const std::string & *ao*,
 const std::string & *af*,
 const std::string & *lf*,
 bool *b_interactive_*)

Parameters

<i>ao</i>	Acknowledgement string at end of successful command responses
<i>af</i>	Acknowledgement string at end of failed command responses
<i>lf</i>	File system path of file to use as log file. MHA appends.

5.348.2.2 `~mhaserver_t()` `mhaserver_t::~~mhaserver_t ()`

5.348.3 Member Function Documentation

5.348.3.1 `on_received_line()` `std::string mhaserver_t::on_received_line (const std::string & line) [virtual]`

A line of text was received from network client.

5.348.3.2 `acceptor_started()` `void mhaserver_t::acceptor_started () [virtual]`

Notification: "TCP port is open".

5.348.3.3 `send_port_announcement()` `void mhaserver_t::send_port_announcement () [virtual]`

sends an announcement which port this MHA is listening on to the creator of the process.

See command line option `-announce`

5.348.3.4 `start_stdin_thread()` `void mhaserver_t::start_stdin_thread () [virtual]`

Starts a separate thread that reads lines from stdin and forwards these lines over TCP to the MHA configuration thread which multiplexes multiple TCP connections.

Enables users to type mha configuration language commands directly into the terminal where MHA was started, without the need to use third-party tools like nc or putty.

5.348.3.5 set_announce_port() `void mhaserver_t::set_announce_port (unsigned short announce_port) [virtual]`

If set to nonzero, the spawning process has asked to be notified of the TCP port used by this process.

5.348.3.6 logstring() `void mhaserver_t::logstring (const std::string & s) [inline]`

Log a message to log file.

5.348.3.7 run() `int mhaserver_t::run (unsigned short port, const std::string & _interface)`

Accept network connections and act on commands.

Calls **acceptor_started()** (p. 1242) when the TCP port is opened. Calls `on_received_line` for every line received.

Returns

exit code that can be used as process exit code

5.348.4 Member Data Documentation

5.348.4.1 tcpserver `std::shared_ptr< tcp_server_t > mhaserver_t::tcpserver [private]`

5.348.4.2 ack_ok `std::string mhaserver_t::ack_ok [private]`

5.348.4.3 ack_fail `std::string mhaserver_t::ack_fail [private]`

5.348.4.4 logfile `std::string mhaserver_t::logfile [private]`

5.348.4.5 announce_port `unsigned short mhaserver_t::announce_port [private]`

5.348.4.6 b_interactive `bool mhaserver_t::b_interactive [private]`

5.348.4.7 pid_mon `MHAParser::int_mon_t mhaserver_t::pid_mon [private]`

5.348.4.8 port `MHAParser::int_t mhaserver_t::port`

The documentation for this class was generated from the following file:

- `mhamain.cpp`

5.349 mhaserver_t::tcp_server_t Class Reference

Inheritance diagram for `mhaserver_t::tcp_server_t`:

Public Member Functions

- **tcp_server_t** (const std::string &interface, uint16_t **port**, mhaserver_t * **mha**)
- virtual bool **on_received_line** (std::shared_ptr< **mha_tcp::buffered_socket_t** > **c**, const std::string &l) override

This method is invoked when a line of text is received on one of the accepted connections.

Private Attributes

- mhaserver_t * **mha**

5.349.1 Constructor & Destructor Documentation

5.349.1.1 tcp_server_t() mhaserver_t::tcp_server_t::tcp_server_t (const std::string & *interface*, uint16_t *port*, mhaserver_t * *mha*) [inline]

5.349.2 Member Function Documentation

5.349.2.1 on_received_line() virtual bool mhaserver_t::tcp_server_t::on_received_line (std::shared_ptr< **mha_tcp::buffered_socket_t** > *c*, const std::string & *l*) [inline], [override], [virtual]

This method is invoked when a line of text is received on one of the accepted connections.

Override this method to process the communication with the client.

Parameters

<i>c</i>	the connection that has received this line
<i>l</i>	the line that has been received, without the line ending

Returns

client should return true when client wants to read another line of text, else false.

Reimplemented from `mha_tcp::server_t` (p. 876).

5.349.3 Member Data Documentation

5.349.3.1 `mha` `mhaserver_t*` `mhaserver_t::tcp_server_t::mha` [private]

The documentation for this class was generated from the following file:

5.350 MHASignal::async_rmslevel_t Class Reference

Class for asynchronous level metering.

Inheritance diagram for `MHASignal::async_rmslevel_t`:

Public Member Functions

- **async_rmslevel_t** (unsigned int frames, unsigned int **channels**)
Constructor for level metering class.
- std::vector< float > **rmslevel** () const
Read-only function for querying the current RMS level.
- std::vector< float > **peaklevel** () const
Read-only function for querying the current peak level.
- void **process** (**mha_wave_t** *s)
Function to store a chunk of audio in the level meter.

Private Attributes

- unsigned int **pos**
- unsigned int **filled**

Additional Inherited Members

5.350.1 Detailed Description

Class for asynchronous level metering.

5.350.2 Constructor & Destructor Documentation

5.350.2.1 async_rmslevel_t() MHASignal::async_rmslevel_t::async_rmslevel_t (unsigned int *frames*, unsigned int *channels*)

Constructor for level metering class.

Allocate memory for metering. The RMS integration time corresponds to the number of frames in the buffer.

Parameters

<i>frames</i>	Number of frames to integrate.
<i>channels</i>	Number of channels used for level-metering.

5.350.3 Member Function Documentation

5.350.3.1 rmslevel() `std::vector< float > MHASignal::async_rmslevel_t::rmslevel () const`

Read-only function for querying the current RMS level.

Returns

Vector of floats, one value for each channel, containing the RMS level in dB (SPL if calibrated properly).

5.350.3.2 peaklevel() `std::vector< float > MHASignal::async_rmslevel_t::peaklevel () const`

Read-only function for querying the current peak level.

Returns

Vector of floats, one value for each channel, containing the peak level in dB (SPL if calibrated properly).

5.350.3.3 process() `void MHASignal::async_rmslevel_t::process (mha_wave_t * s)`

Function to store a chunk of audio in the level meter.

Parameters

s	Audio chunk (same number of channels required as given in the constructor).
---	---

Private Attributes

- unsigned int **channels**
- unsigned int * **delays**
- unsigned int * **pos**
- **mha_real_t** ** **buffer**

5.352.1 Detailed Description

Class to realize a simple delay of waveform streams.

5.352.2 Constructor & Destructor Documentation

5.352.2.1 delay_t() MHASignal::delay_t::delay_t (
std::vector< int > *delays*,
unsigned int *channels*)

Constructor.

Parameters

<i>delays</i>	Vector of delays, one entry for each channel.
<i>channels</i>	Number of channels expected.

5.352.2.2 ~delay_t() MHASignal::delay_t::~~delay_t ()

5.352.3 Member Function Documentation

5.352.3.1 process() `mha_wave_t * MHASignal::delay_t::process (mha_wave_t * s)`

Processing method.

Parameters

<code>s</code>	Input waveform fragment, with number of channels provided in constructor.
----------------	---

Returns

Output waveform fragment.

5.352.3.2 inspect() `std::string MHASignal::delay_t::inspect () const [inline]`

5.352.4 Member Data Documentation

5.354 MHASignal::doublebuffer_t Class Reference

Double-buffering class.

Inheritance diagram for `MHASignal::doublebuffer_t`:

Public Member Functions

- **doublebuffer_t** (unsigned int nchannels_in, unsigned int nchannels_out, unsigned int outer_fragsize, unsigned int inner_fragsize)
Constructor of double buffer.
- virtual **~doublebuffer_t** ()
- **mha_wave_t * outer_process** (**mha_wave_t *s**)
Method to pass audio fragments into the inner layer.

Protected Member Functions

- virtual **mha_wave_t * inner_process** (**mha_wave_t *s**)=0
Method to realize inner processing callback.

Private Member Functions

- unsigned int **min** (unsigned int a, unsigned int b)

Private Attributes

- **waveform_t outer_out**
- **mha_wave_t this_outer_out**
- **waveform_t inner_in**
- **waveform_t inner_out**
- unsigned int **k_inner**
- unsigned int **k_outer**
- unsigned int **ch**

5.354.1 Detailed Description

Double-buffering class.

This class has two layers: The outer layer, with an outer fragment size, and an inner layer, with its own fragment size. Data is passed into the inner layer through the `doublebuffer_t::outer_process()` callback. The pure virtual method `doublebuffer_t::inner_process()` (p. 1256) is called whenever enough data is available.

5.354.2 Constructor & Destructor Documentation

5.354.2.1 doublebuffer_t() `MHASignal::doublebuffer_t::doublebuffer_t (unsigned int nchannels_in, unsigned int nchannels_out, unsigned int outer_fragsize, unsigned int inner_fragsize)`

Constructor of double buffer.

Parameters

<i>nchannels_in</i>	Number of channels at the input (both layers).
<i>nchannels_out</i>	Number of channels at the output (both layers).
<i>outer_fragsize</i>	Fragment size of the outer layer (e.g., hardware fragment size)
<i>inner_fragsize</i>	Fragment size of the inner layer (e.g., software fragment size)

5.354.2.2 `~doublebuffer_t()` `MHASignal::doublebuffer_t::~~doublebuffer_t ()` [virtual]

5.354.3 Member Function Documentation

5.354.3.1 `outer_process()` `mha_wave_t * MHASignal::doublebuffer_t::outer_process (mha_wave_t * s)`

Method to pass audio fragments into the inner layer.

Parameters

<i>s</i>	Pointer to input waveform fragment.
----------	-------------------------------------

Returns

Pointer to output waveform fragment.

5.354.3.2 `inner_process()` `virtual mha_wave_t* MHASignal::doublebuffer_t::inner_↔ process (mha_wave_t * s)` [protected], [pure virtual]

Method to realize inner processing callback.

To be overwritten by derived classes.

Parameters

s	Pointer to input waveform fragment.
---	-------------------------------------

Returns

Pointer to output waveform fragment.

Implemented in **db_t** (p. 385).

5.354.3.3 min() unsigned int MHASignal::doublebuffer_t::min (
unsigned int a,
unsigned int b) [inline], [private]

5.354.4 Member Data Documentation

5.355.1 Constructor & Destructor Documentation

5.355.1.1 **fft_t()** MHASignal::fft_t::fft_t (
 const unsigned int & n)

5.355.1.2 **~fft_t()** MHASignal::fft_t::~~fft_t ()

5.355.2 Member Function Documentation

5.355.2.1 **wave2spec()** void MHASignal::fft_t::wave2spec (
 const **mha_wave_t** * wave,
 mha_spec_t * spec,
 bool swap)

fast fourier transform.

if swap is set, the buffer halves of the wave signal are exchanged before computing the fft.

5.355.2.2 spec2wave() [1/2] void MHA_Signal::fft_t::spec2wave (
const mha_spec_t * spec,
mha_wave_t * wave)

5.355.2.3 spec2wave() [2/2] void MHA_Signal::fft_t::spec2wave (
const mha_spec_t * spec,
mha_wave_t * wave,
unsigned int offset)

wave may have fewer number of frames than needed for a complete iFFT.

Only as many frames are written into wave as fit, starting with offset offset of the complete iFFT.

5.355.2.4 forward() void MHA_Signal::fft_t::forward (
mha_spec_t * sIn,
mha_spec_t * sOut)

5.355.2.5 backward() void MHA_Signal::fft_t::backward (
mha_spec_t * sIn,
mha_spec_t * sOut)

5.355.2.6 wave2spec_scale() void MHA_Signal::fft_t::wave2spec_scale (

5.358.1 Detailed Description

Copy a fixed waveform fragment to a series of waveform fragments of other size.

This class is designed to continuously play back a waveform to an output stream, with variable output block size.

5.358.2 Member Enumeration Documentation

5.358.2.1 **level_mode_t** enum **MHASignal::loop_wavefragment_t::level_mode_t**

Switch for playback level mode.

Enumerator

relative	The nominal level is applied as a gain to the source signal.
peak	The nominal level is the peak level of source signal in Pascal.
rms	The nominal level is the RMS level of the source signal in Pascal.
rms_limit40	

5.358.2.2 playback_mode_t `enum MHASignal::loop_wavefragment_t::playback_mode_t`

Switch for playback mode.

Enumerator

add	Add source signal to output stream.
replace	Replace output stream by source signal.
input	Do nothing, keep output stream (source position is unchanged).
mute	Mute output stream (source position is unchanged).

5.358.3 Constructor & Destructor Documentation

5.358.3.1 loop_wavefragment_t() `MHASignal::loop_wavefragment_t::loop_wavefragment_t (`

```

    const mha_wave_t & src,
    bool loop,
    level_mode_t level_mode,
    std::vector< int > channels,
    unsigned int startpos = 0 )

```

Constructor to create an instance of `loop_wavefragment_t` (p. 1267) based on an existing waveform block.

Parameters

<i>src</i>	Waveform block to copy data from.
<i>loop</i>	Flag whether the block should be looped or played once.
<i>level_mode</i>	Configuration of playback level (see MHASignal::loop_wavefragment_t::level_mode_t (p. 1268) for details)
<i>channels</i>	Mapping of input to output channels.
<i>startpos</i>	Starting position

5.358.4 Member Function Documentation

5.358.4.1 get_mapping() `std::vector< int > MHASignal::loop_wavefragment_t::get_↔
mapping (`
 `unsigned int channels)`

5.358.4.2 playback() [1/3] `void MHASignal::loop_wavefragment_t::playback (`
 `mha_wave_t * s,`
 `playback_mode_t pmode,`
 `mha_wave_t * level_pa,`
 `const std::vector< int > & channels)`

Add source waveform block to an output block.

Parameters

<i>s</i>	Output block (streamed signal).
<i>pmode</i>	Playback mode (add, replace, input, mute).
<i>level_pa</i>	Linear output level/gain (depending on level_mode parameter in constructor); one value for each sample in output block.
<i>channels</i>	Output channels

5.358.4.3 playback() [2/3] `void MHASignal::loop_wavefragment_t::playback (`
 `mha_wave_t * s,`
 `playback_mode_t pmode,`
 `mha_wave_t * level_pa)`

Add source waveform block to an output block.

Parameters

<i>s</i>	Output block (streamed signal).
<i>pmode</i>	Playback mode (add, replace, input, mute).
<i>level_pa</i>	Linear output level/gain (depending on level_mode parameter in constructor); one value for each sample in output block.

5.358.4.4 playback() [3/3] void MHASignal::loop_wavefragment_t::playback (
 mha_wave_t * *s*,
 playback_mode_t *pmode*)

Add source waveform block to an output block.

Parameters

<i>s</i>	Output block (streamed signal).
<i>pmode</i>	Playback mode (add, replace, input, mute).

5.358.4.5 set_level_lin() void MHASignal::loop_wavefragment_t::set_level_lin (
 mha_real_t *l*)

5.358.4.6 set_level_db() void MHASignal::loop_wavefragment_t::set_level_db (
 mha_real_t *l*)

5.358.4.7 rewind() void MHASignal::loop_wavefragment_t::rewind () [inline]

5.358.4.8 locate_end() void MHASignal::loop_wavefragment_t::locate_end () [inline]

5.358.4.9 is_playback_active() bool MHASignal::loop_wavefragment_t::is_playback_↔
 active () const [inline]

5.359 MHASignal::matrix_t Class Reference

n-dimensional matrix with real or complex floating point values.

Inheritance diagram for MHASignal::matrix_t:

Public Member Functions

- **matrix_t** (unsigned int nrows, unsigned int ncols, bool b_is_complex=true)
Create a two-dimensional matrix.
- **matrix_t** (const **mha_spec_t** &spec)
Create a two-dimensional matrix from a spectrum, copy values.
- **matrix_t** (const **MHASignal::uint_vector_t** & **size**, bool b_is_complex=true)
Create n-dimensional matrix, described by size argument.
- **matrix_t** (const **MHASignal::matrix_t** &)
- **matrix_t** (const uint8_t *buf, unsigned int len)
Construct from memory area.
- **~matrix_t** ()
- **MHASignal::matrix_t** & **operator=** (const **MHASignal::matrix_t** &)
- **MHASignal::matrix_t** & **operator=** (const **MHA_AC::comm_var_t** &v)
Fill matrix with data of an AC variable object.
- **MHA_AC::comm_var_t** **get_comm_var** ()
Return a AC communication variable pointing to the data of the current matrix.
- unsigned int **dimension** () const
Return the dimension of the matrix.
- unsigned int **size** (unsigned int k) const
Return the size of the matrix.
- unsigned int **get_nelements** () const
Return total number of elements.
- bool **is_same_size** (const **MHASignal::matrix_t** &)
Test if matrix has same size as other.
- bool **iscomplex** () const
Return information about complexity.
- **mha_real_t** & **real** (const **MHASignal::uint_vector_t** &index)
Access real part of an element in a n-dimensional matrix.
- **mha_real_t** & **imag** (const **MHASignal::uint_vector_t** &index)
Access imaginary part of an element in a n-dimensional matrix.
- **mha_complex_t** & **operator()** (const **MHASignal::uint_vector_t** &index)
Access complex value of an element in a n-dimensional matrix.
- const **mha_real_t** & **real** (const **MHASignal::uint_vector_t** &index) const
Access real part of an element in a n-dimensional matrix.
- const **mha_real_t** & **imag** (const **MHASignal::uint_vector_t** &index) const
Access imaginary part of an element in a n-dimensional matrix.
- const **mha_complex_t** & **operator()** (const **MHASignal::uint_vector_t** &index) const
Access complex value of an element in a n-dimensional matrix.
- **mha_real_t** & **real** (unsigned int row, unsigned int col)
Access real part of an element in a two-dimensional matrix.
- **mha_real_t** & **imag** (unsigned int row, unsigned int col)
Access imaginary part of an element in a two-dimensional matrix.
- **mha_complex_t** & **operator()** (unsigned int row, unsigned int col)
Access complex value of an element in a two-dimensional matrix.

- const **mha_real_t** & **real** (unsigned int row, unsigned int col) const
Access real part of an element in a two-dimensional matrix.
- const **mha_real_t** & **imag** (unsigned int row, unsigned int col) const
Access imaginary part of an element in a two-dimensional matrix.
- const **mha_complex_t** & **operator()** (unsigned int row, unsigned int col) const
Access complex value of an element in a two-dimensional matrix.
- unsigned int **get_nreals** () const
- unsigned int **get_index** (unsigned int row, unsigned int col) const
- unsigned int **get_index** (const **MHASignal::uint_vector_t** &index) const
- unsigned int **numbytes** () const
Return number of bytes needed to store into memory.
- unsigned int **write** (uint8_t *buf, unsigned int len) const
Copy to memory area.
- const **mha_real_t** * **get_rdata** () const
Return pointer of real data.
- const **mha_complex_t** * **get_cdata** () const
Return pointer of complex data.

Private Attributes

- uint32_t **complex_ofs**
- uint32_t **nelements**
- union {
 mha_real_t * **rdata**
 mha_complex_t * **cdata**
};

Additional Inherited Members

5.359.1 Detailed Description

n-dimensional matrix with real or complex floating point values.

Warning

The member functions **imag()** (p. 1279) and **operator()** should only be called if the matrix is defined to hold complex values.

5.359.2 Constructor & Destructor Documentation

5.359.2.1 matrix_t() [1/5] MHASignal::matrix_t::matrix_t (
 unsigned int *nrows*,
 unsigned int *ncols*,
 bool *b_is_complex* = *true*)

Create a two-dimensional matrix.

Parameters

<i>nrows</i>	Number of rows
<i>ncols</i>	Number of columns
<i>b_is_complex</i>	Add space for complex values

5.359.2.2 matrix_t() [2/5] `MHASignal::matrix_t::matrix_t (`
`const mha_spec_t & spec)`

Create a two-dimensional matrix from a spectrum, copy values.

Parameters

<i>spec</i>	Source spectrum structure
-------------	---------------------------

5.359.2.3 matrix_t() [3/5] `MHASignal::matrix_t::matrix_t (`
`const MHASignal::uint_vector_t & size,`
`bool b_is_complex = true)`

Create n-dimensional matrix, described by size argument.

Parameters

<i>size</i>	Size vector
<i>b_is_complex</i>	Add space for complex values

5.359.2.4 matrix_t() [4/5] `MHASignal::matrix_t::matrix_t (`
`const MHASignal::matrix_t & src)`

5.359.2.5 matrix_t() [5/5] `MHASignal::matrix_t::matrix_t (`
`const uint8_t * buf,`
`unsigned int len)`

Construct from memory area.

Warning

This constructor is not real time safe

5.359.2.6 `~matrix_t()` `MHASignal::matrix_t::~~matrix_t ()`

5.359.3 Member Function Documentation

5.359.3.1 `operator=()` [1/2] `matrix_t & MHASignal::matrix_t::operator= (const MHASignal::matrix_t & src)`

5.359.3.2 `operator=()` [2/2] `MHASignal::matrix_t & MHASignal::matrix_t::operator= (const MHA_AC::comm_var_t & v)`

Fill matrix with data of an AC variable object.

Parameters

<i>v</i>	Source AC variable (comm_var_t)
----------	------------------------------------

Note

The type and dimension of the AC variable must match the type and dimension of the matrix.

5.359.3.3 `get_comm_var()` `MHA_AC::comm_var_t MHASignal::matrix_t::get_comm_var ()`

Return a AC communication variable pointing to the data of the current matrix.

Returns

AC variable object (comm_var_t), valid for the life time of the matrix.

5.359.3.4 dimension() `unsigned int MHASignal::matrix_t::dimension () const [inline]`

Return the dimension of the matrix.

Returns

Dimension of the matrix

5.359.3.5 size() `unsigned int MHASignal::matrix_t::size (unsigned int k) const [inline]`

Return the size of the matrix.

Parameters

k	Dimension
-----	-----------

Returns

Size of the matrix in dimension k

5.359.3.6 get_nelements() `unsigned int MHASignal::matrix_t::get_nelements () const`

Return total number of elements.

5.359.3.7 is_same_size() `bool MHASignal::matrix_t::is_same_size (const MHASignal::matrix_t & src)`

Test if matrix has same size as other.

5.359.3.8 iscomplex() `bool MHASignal::matrix_t::iscomplex () const [inline]`

Return information about complexity.

5.359.3.9 real() `[1/4] mha_real_t& MHASignal::matrix_t::real (const MHASignal::uint_vector_t & index) [inline]`

Access real part of an element in a n-dimensional matrix.

Parameters

<i>index</i>	Index vector
--------------	--------------

5.359.3.10 imag() [1/4] `mha_real_t& MHASignal::matrix_t::imag (`
`const MHASignal::uint_vector_t & index) [inline]`

Access imaginary part of an element in a n-dimensional matrix.

Parameters

<i>index</i>	Index vector
--------------	--------------

5.359.3.11 operator() [1/4] `mha_complex_t& MHASignal::matrix_t::operator() (`
`const MHASignal::uint_vector_t & index) [inline]`

Access complex value of an element in a n-dimensional matrix.

Parameters

<i>index</i>	Index vector
--------------	--------------

5.359.3.12 real() [2/4] `const mha_real_t& MHASignal::matrix_t::real (`
`const MHASignal::uint_vector_t & index) const [inline]`

Access real part of an element in a n-dimensional matrix.

Parameters

<i>index</i>	Index vector
--------------	--------------

5.359.3.13 imag() [2/4] `const mha_real_t& MHASignal::matrix_t::imag (`
`const MHASignal::uint_vector_t & index) const [inline]`

Access imaginary part of an element in a n-dimensional matrix.

Parameters

<i>index</i>	Index vector
--------------	--------------

5.359.3.14 operator() [2/4] `const mha_complex_t& MHASignal::matrix_t::operator()
(
 const MHASignal::uint_vector_t & index) const [inline]`

Access complex value of an element in a n-dimensional matrix.

Parameters

<i>index</i>	Index vector
--------------	--------------

5.359.3.15 real() [3/4] `mha_real_t& MHASignal::matrix_t::real (
 unsigned int row,
 unsigned int col) [inline]`

Access real part of an element in a two-dimensional matrix.

Parameters

<i>row</i>	Row number of element
<i>col</i>	Column number of element

5.359.3.16 imag() [3/4] `mha_real_t& MHASignal::matrix_t::imag (
 unsigned int row,
 unsigned int col) [inline]`

Access imaginary part of an element in a two-dimensional matrix.

Parameters

<i>row</i>	Row number of element
<i>col</i>	Column number of element

5.359.3.17 operator() [3/4] `mha_complex_t& MHASignal::matrix_t::operator() (unsigned int row, unsigned int col) [inline]`

Access complex value of an element in a two-dimensional matrix.

Parameters

<i>row</i>	Row number of element
<i>col</i>	Column number of element

5.359.3.18 real() [4/4] `const mha_real_t& MHASignal::matrix_t::real (unsigned int row, unsigned int col) const [inline]`

Access real part of an element in a two-dimensional matrix.

Parameters

<i>row</i>	Row number of element
<i>col</i>	Column number of element

5.359.3.19 imag() [4/4] `const mha_real_t& MHASignal::matrix_t::imag (unsigned int row, unsigned int col) const [inline]`

Access imaginary part of an element in a two-dimensional matrix.

Parameters

<i>row</i>	Row number of element
<i>col</i>	Column number of element

5.359.3.20 operator() [4/4] `const mha_complex_t& MHASignal::matrix_t::operator()`
 (
 unsigned int *row*,
 unsigned int *col*) `const [inline]`

Access complex value of an element in a two-dimensional matrix.

Parameters

<i>row</i>	Row number of element
<i>col</i>	Column number of element

5.359.3.21 get_nreals() `unsigned int MHASignal::matrix_t::get_nreals () const [inline]`

5.359.3.22 get_index() [1/2] `unsigned int MHASignal::matrix_t::get_index (`
 unsigned int *row*,
 unsigned int *col*) `const`

5.359.3.23 get_index() [2/2] `unsigned int MHASignal::matrix_t::get_index (`
 const **MHASignal::uint_vector_t** & *index*) `const`

5.359.3.24 numbytes() `unsigned int MHASignal::matrix_t::numbytes () const`

Return number of bytes needed to store into memory.

5.359.3.25 write() `unsigned int MHASignal::matrix_t::write (`
 uint8_t * *buf*,
 unsigned int *len*) `const`

Copy to memory area.

5.359.3.26 get_rdata() `const mha_real_t* MHASignal::matrix_t::get_rdata () const [inline]`

Return pointer of real data.

5.359.3.27 get_cdata() `const mha_complex_t* MHASignal::matrix_t::get_cdata () const [inline]`

Return pointer of complex data.

5.359.4 Member Data Documentation

5.359.4.1 complex_ofs `uint32_t MHASignal::matrix_t::complex_ofs [private]`

5.360 MHA_Signal::minphase_t Class Reference

Minimal phase function.

Inheritance diagram for MHA_Signal::minphase_t:

Public Member Functions

- **minphase_t** (unsigned int fftlen, unsigned int ch)
Constructor.
- void **operator()** (mha_spec_t *s)
Transform input spectrum to a minimal-phase spectrum, discarding the original phase.

Private Attributes

- MHA_Signal::waveform_t phase

Additional Inherited Members

5.360.1 Detailed Description

Minimal phase function.

The output spectrum $Y(f)$ is

$$Y(f) = |X(f)|e^{i\mathcal{H}\{\log|X(f)|\}},$$

with the input spectrum $X(f)$ and the Hilbert transformation $\mathcal{H}\{\dots\}$.

5.360.2 Constructor & Destructor Documentation

5.360.2.1 minphase_t() MHA_Signal::minphase_t::minphase_t (
 unsigned int *fftlen*,
 unsigned int *ch*)

Constructor.

Parameters

<i>ftlen</i>	FFT length
<i>ch</i>	Number of channels

5.360.3 Member Function Documentation

5.360.3.1 operator() `void MHASignal::minphase_t::operator() (mha_spec_t * s)`

Transform input spectrum to a minimal-phase spectrum, discarding the original phase.

Parameters

<i>s</i>	Spectrum to operate on.
----------	-------------------------

5.360.4 Member Data Documentation

5.360.4.1 phase `MHASignal::waveform_t MHASignal::minphase_t::phase [private]`

The documentation for this class was generated from the following files:

5.361 MHASignal::quantizer_t Class Reference

Simple simulation of fixpoint quantization.

Public Member Functions

- **quantizer_t** (unsigned int num_bits)
Constructor.
- void **operator()** (`mha_wave_t &s`)
Quantization of a waveform fragment.

Private Attributes

- `bool limit`
- `mha_real_t upscale`
- `mha_real_t downscale`
- `mha_real_t up_limit`

5.361.1 Detailed Description

Simple simulation of fixpoint quantization.

5.361.2 Constructor & Destructor Documentation

5.361.2.1 `quantizer_t()` `MHASignal::quantizer_t::quantizer_t (unsigned int num_bits)`

Constructor.

Parameters

<code>num_bits</code>	Number of bits to simulate, or zero for limiting to [-1,1] only.
-----------------------	--

5.361.3 Member Function Documentation

5.361.3.1 `operator>()` `void MHASignal::quantizer_t::operator() (mha_wave_t & s)`

Quantization of a waveform fragment.

Parameters

<code>s</code>	Waveform fragment to be quantized.
----------------	------------------------------------

5.361.4 Member Data Documentation

5.361.4.1 limit `bool MHASignal::quantizer_t::limit [private]`

5.361.4.2 upscale `mha_real_t MHASignal::quantizer_t::upscale [private]`

5.361.4.3 downscale `mha_real_t MHASignal::quantizer_t::downscale [private]`

5.361.4.4 up_limit `mha_real_t MHASignal::quantizer_t::up_limit [private]`

The documentation for this class was generated from the following files:

5.362 MHASignal::ringbuffer_t Class Reference

A ringbuffer class for time domain audio signal, which makes no assumptions with respect to fragment size.

Inheritance diagram for MHASignal::ringbuffer_t:

Public Member Functions

- **ringbuffer_t** (unsigned frames, unsigned **channels**, unsigned **prefilled_frames**)
Creates new ringbuffer for time domain signal.
- unsigned **contained_frames** () const
number of currently contained frames
- **mha_real_t** & **value** (unsigned frame, unsigned channel)
Access to value stored in ringbuffer.
- void **discard** (unsigned frames)
Discards the oldest frames.
- void **write** (**mha_wave_t** &signal)
Copies the contents of the signal into the ringbuffer if there is enough space.

Private Attributes

- unsigned **next_read_frame_index**
Index of oldest frame in underlying storage for the ringbuffer.
- unsigned **next_write_frame_index**
Index of first free frame in underlying storage.

Additional Inherited Members

5.362.1 Detailed Description

A ringbuffer class for time domain audio signal, which makes no assumptions with respect to fragment size.

Blocks of audio signal can be placed into the ringbuffer using the **write** (p. 1290) method. Individual audio samples can be accessed and altered using the **value** (p. 1289) method. Blocks of audio data can be deleted from the ringbuffer using the **discard** (p. 1290) method.

5.362.2 Constructor & Destructor Documentation

5.362.2.1 ringbuffer_t() `ringbuffer_t::ringbuffer_t (`
 unsigned *frames*,
 unsigned *channels*,
 unsigned *prefilled_frames*)

Creates new ringbuffer for time domain signal.

Constructor allocates enough storage so that *frames* audio samples can be stored in the ringbuffer.

Parameters

<i>frames</i>	Size of ringbuffer in samples per channel. Maximum number of frames that can be stored in the ringbuffer at one time. This number cannot be changed after instance creation.
<i>channels</i>	Number of audio channels.
<i>prefilled_frames</i>	Number of frames to be prefilled with zero values. Many applications of a ringbuffer require the introduction of a delay. In practice, this delay is achieved by inserting silence audio samples (zeros) into the ringbuffer before the start of the actual signal is inserted for the first time.

Exceptions

<i>MHA_Error</i> (p. 818)	if <code>prefilled_frames > frames</code>
----------------------------------	--

5.362.3 Member Function Documentation

5.362.3.1 contained_frames() `unsigned MHASignal::ringbuffer_t::contained_frames () const [inline]`

number of currently contained frames

5.362.3.2 value() `mha_real_t& MHASignal::ringbuffer_t::value (unsigned frame, unsigned channel) [inline]`

Access to value stored in ringbuffer.

frame index is relative to the oldest frame stored in the ringbuffer, therefore, the meaning of the *frame* changes when the **discard** (p. 1290) method is called.

Parameters

<i>frame</i>	frame index, 0 corresponds to oldest frame stored.
<i>channel</i>	audio channel

Returns

reference to contained sample value

Exceptions

<i>MHA_Error</i> (p. 818)	if channel or frame out of bounds.
----------------------------------	------------------------------------

5.362.3.3 discard() `void MHA_Signal::ringbuffer_t::discard (unsigned frames) [inline]`

Discards the oldest frames.

Makes room for new **write** (p. 1290), alters base frame index for **value** (p. 1289)

Parameters

<i>frames</i>	how many frames to discard.
---------------	-----------------------------

Exceptions

<i>MHA_Error</i> (p. 818)	if frames > contained_frames (p. 1289)
----------------------------------	---

5.362.3.4 write() `void MHA_Signal::ringbuffer_t::write (mha_wave_t & signal) [inline]`

Copies the contents of the signal into the ringbuffer if there is enough space.

Parameters

<i>signal</i>	New signal to be appended to the signal already present in the ringbuffer
---------------	---

Exceptions

<i>MHA_Error</i> (p. 818)	if there is not enough space or if the channel count mismatches. Nothing is copied if the space is insufficient.
----------------------------------	--

5.362.4 Member Data Documentation

5.362.4.1 next_read_frame_index unsigned MHASignal::ringbuffer_t::next_read_↔
frame_index [private]

Index of oldest frame in underlying storage for the ringbuffer.

This value is added to the frame parameter of the **value** (p. 1289) method, and this value is altered when **discard** (p. 1290) is called.

5.362.4.2 next_write_frame_index unsigned MHASignal::ringbuffer_t::next_write_↔
frame_index [private]

Index of first free frame in underlying storage.

Next frame to be stored will be placed here.

The documentation for this class was generated from the following files:

- **mha_signal.hh**
- **mha_signal.cpp**

5.363 MHASignal::schroeder_t Class Reference

Schroeder tone complex class.

Inheritance diagram for MHASignal::schroeder_t:

Public Types

- enum **sign_t** { **up**, **down** }
Enumerator for sign of Schroeder tone complex sweep direction.
- typedef float(* **groupdelay_t**) (float f, float fmin, float fmax)
Function type for group delay definition.

Public Member Functions

- **schroeder_t** (unsigned int len, unsigned int **channels**=1, **schroeder_t::sign_t** sign=**up**, **mha_real_t** speed=1)
Constructor.
- **schroeder_t** (unsigned int len, unsigned int **channels**=1, **schroeder_t::groupdelay_t** freqfun=**MHASignal::schroeder_t::identity**, float fmin=0, float fmax=1, float eps=1e-10)
Construct create Schroeder tone complex from a given frequency function.

Static Public Member Functions

- static float **identity** (float x, float, float)
- static float **log_up** (float x, float fmin, float fmax)
- static float **log_down** (float x, float fmin, float fmax)

Additional Inherited Members

5.363.1 Detailed Description

Schroeder tone complex class.

The Schroeder tone complex is a sweep defined in the sampled spectrum:

$$\Phi(f) = \sigma 2\pi\tau(2f/f_s)^{2\alpha}, \quad S(f) = e^{i\Phi(f)}$$

f is the sampled frequency in Hz, σ is the sign of the sweep (-1 for up sweep, +1 for down sweep), τ is the sweep duration in samples, f_s is the sampling rate in Hz and α is the relative sweep speed.

5.363.2 Member Typedef Documentation

5.363.2.1 groupdelay_t typedef float(* MHASignal::schroeder_t::groupdelay_t) (float f, float fmin, float fmax)

Function type for group delay definition.

Parameters

<i>f</i>	Frequency relative to Nyquist frequency.
<i>fmin</i>	Minimum frequency relative to Nyquist frequency.
<i>fmax</i>	Maximum frequency relative to Nyquist frequency.

5.363.3 Member Enumeration Documentation

5.363.3.1 `sign_t` enum MHASignal::schroeder_t::sign_t

Enumerator for sign of Schroeder tone complex sweep direction.

Enumerator

up	Sweep from zero to Nyquist frequency ($\sigma = -1$)
down	Sweep from Nyquist frequency to zero ($\sigma = +1$)

5.363.4 Constructor & Destructor Documentation

5.363.4.1 `schroeder_t()` [1/2] MHASignal::schroeder_t::schroeder_t (
 unsigned int *len*,
 unsigned int *channels* = 1,
 schroeder_t::sign_t *sign* = up,
 mha_real_t *speed* = 1)

Constructor.

Parameters of the Schroeder tone complex are configured in the constructor.

Parameters

<i>len</i>	Length τ of the Schroeder tone complex in samples
<i>channels</i>	Number of channels
<i>sign</i>	Sign σ of Schroeder sweep
<i>speed</i>	Relative speed α (curvature of phase function)

5.363.4.2 schroeder_t() [2/2] `MHASignal::schroeder_t::schroeder_t (`
`unsigned int len,`
`unsigned int channels = 1,`
`schroeder_t::groupdelay_t freqfun = MHASignal::schroeder_t::identity,`
`float fmin = 0,`
`float fmax = 1,`
`float eps = 1e-10)`

Construct create Schroeder tone complex from a given frequency function.

The frequency function $g(f)$ defines the sweep speed and sign (based on the group delay). It must be defined in the interval $[0,1)$ and should return values in the interval $[0,1]$.

$$\Phi(f) = -4\pi\tau \int_0^{\tau} g(f) \, df, \quad S(f) = e^{i\Phi(f)}$$

Parameters

<i>len</i>	Length τ of the Schroeder tone complex in samples.
<i>channels</i>	Number of channels.
<i>freqfun</i>	Frequency function $g(f)$.
<i>fmin</i>	Start frequency (relative to Nyquist frequency).
<i>fmax</i>	End frequency (relative to Nyquist frequency).
<i>eps</i>	Stability constant for frequency ranges not covered by Schroeder tone complex.

5.363.5 Member Function Documentation

5.363.5.1 identity() `static float MHASignal::schroeder_t::identity (`
`float x,`
`float ,`
`float) [inline], [static]`

5.363.5.2 log_up() `static float MHASignal::schroeder_t::log_up (float x, float fmin, float fmax) [inline], [static]`

5.363.5.3 log_down() `static float MHASignal::schroeder_t::log_down (float x, float fmin, float fmax) [inline], [static]`

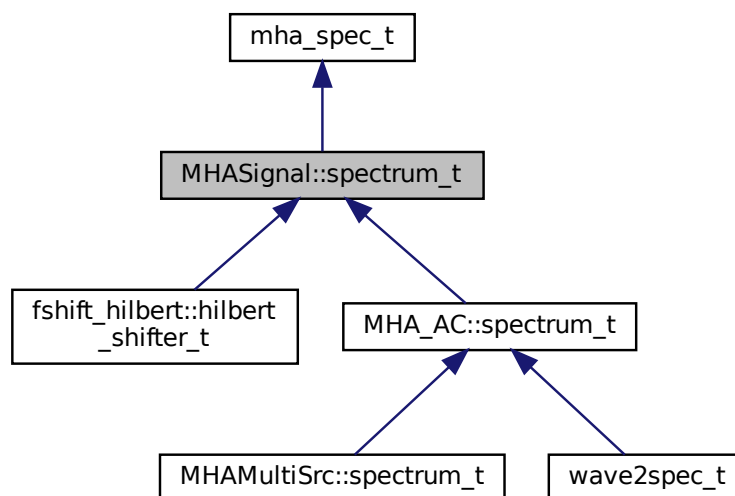

The documentation for this class was generated from the following files:

- `mha_signal.hh`
- `mha_signal.cpp`

5.364 MHASignal::spectrum_t Class Reference

a signal processing class for spectral data (based on `mha_spec_t` (p. 848))

Inheritance diagram for MHASignal::spectrum_t:

Public Member Functions

- **spectrum_t** (const unsigned int &frames, const unsigned int & **channels**)
constructor of spectrum class
- **spectrum_t** (const **mha_spec_t** &)
Copy constructor.
- **spectrum_t** (const **MHASignal::spectrum_t** &)
Copy constructor.
- **spectrum_t** (const std::vector< **mha_complex_t** > &)
- virtual **~spectrum_t** (void)
- **mha_complex_t** & **operator()** (unsigned int f, unsigned int ch)
Access to element.
- **mha_complex_t** & **operator[]** (unsigned int k)
Access to a single element, direct index into data buffer.
- **mha_complex_t** & **value** (unsigned int f, unsigned int ch)
Access to element.
- void **copy** (const **mha_spec_t** &)
copy all elements from a spectrum
- void **copy_channel** (const **mha_spec_t** &s, unsigned sch, unsigned dch)
Copy one channel of a given spectrum signal to a target channel.
- void **export_to** (**mha_spec_t** &)
copy elements to spectrum structure
- void **scale** (const unsigned int &, const unsigned int &, const unsigned int &, const **mha_real_t** &)
scale section [a,b] in channel "ch" by "val"
- void **scale_channel** (const unsigned int &, const **mha_real_t** &)
scale all elements in one channel

Additional Inherited Members

5.364.1 Detailed Description

a signal processing class for spectral data (based on **mha_spec_t** (p. 848))

5.364.2 Constructor & Destructor Documentation

5.364.2.1 spectrum_t() [1/4] `spectrum_t::spectrum_t (`
`const unsigned int & frames,`
`const unsigned int & channels)`

constructor of spectrum class

Allocates buffers and initializes memory to zeros.

Parameters

<i>frames</i>	number of frames (fft bins) in one channel. Number of Frames is usually $\text{fftlen} / 2 + 1$
<i>channels</i>	number of channels

5.364.2.2 spectrum_t() [2/4] `spectrum_t::spectrum_t (const mha_spec_t & src) [explicit]`

Copy constructor.

5.364.2.3 spectrum_t() [3/4] `spectrum_t::spectrum_t (const MHASignal::spectrum_t & src)`

Copy constructor.

5.364.2.4 spectrum_t() [4/4] `spectrum_t::spectrum_t (const std::vector< mha_complex_t > & src)`

5.364.2.5 ~spectrum_t() `spectrum_t::~~spectrum_t (void) [virtual]`

Reimplemented in `MHA_AC::spectrum_t` (p. 789).

5.364.3 Member Function Documentation

5.364.3.1 operator()() `mha_complex_t& MHASignal::spectrum_t::operator() (unsigned int f, unsigned int ch) [inline]`

Access to element.

Parameters

<i>f</i>	Bin number
<i>ch</i>	Channel number

Returns

Reference to element

5.364.3.2 operator[]() `mha_complex_t& MHA_Signal::spectrum_t::operator[] (unsigned int k) [inline]`

Access to a single element, direct index into data buffer.

Parameters

<i>k</i>	Buffer index
----------	--------------

Returns

Reference to element

5.364.3.3 value() `mha_complex_t& MHA_Signal::spectrum_t::value (unsigned int f, unsigned int ch) [inline]`

Access to element.

Parameters

<i>f</i>	Bin number
<i>ch</i>	Channel number

Returns

Reference to element

5.364.3.4 copy() `void spectrum_t::copy (`
 `const mha_spec_t & src)`

copy all elements from a spectrum

Parameters

<i>src</i>	input spectrum
------------	----------------

5.364.3.5 copy_channel() `void spectrum_t::copy_channel (`
 `const mha_spec_t & s,`
 `unsigned sch,`
 `unsigned dch)`

Copy one channel of a given spectrum signal to a target channel.

Parameters

<i>s</i>	Input spectrum signal
<i>sch</i>	Channel index in source signal
<i>dch</i>	Channel index in destination (this) signal

5.364.3.6 export_to() `void spectrum_t::export_to (`
 `mha_spec_t & dest)`

copy elements to spectrum structure

Parameters

<i>dest</i>	destination spectrum structure
-------------	--------------------------------

5.364.3.7 scale() `void spectrum_t::scale (`
 `const unsigned int & a,`
 `const unsigned int & b,`
 `const unsigned int & ch,`
 `const mha_real_t & val)`

scale section [a,b) in channel "ch" by "val"

Parameters

<i>a</i>	starting frame
<i>b</i>	end frame (excluded)
<i>ch</i>	channel number
<i>val</i>	scale factor

5.364.3.8 scale_channel() `void spectrum_t::scale_channel (`
 `const unsigned int & ch,`
 `const mha_real_t & src)`

scale all elements in one channel

Parameters

<i>ch</i>	channel number
<i>src</i>	scale factor

The documentation for this class was generated from the following files:

5.366 MHASignal::subsample_delay_t Class Reference

implements subsample delay in spectral domain.

Public Member Functions

- **subsample_delay_t** (const std::vector< float > &subsample_delay, unsigned fftlen)
Constructor computes complex phase factors to apply to achieve subsample delay.
- void **process** (**mha_spec_t** *s)
Apply the phase_gains to s to achieve the subsample delay.
- void **process** (**mha_spec_t** *s, unsigned idx)
Apply the pase gains to channel idx in s to achieve the subsample delay in channel idx.

Public Attributes

- **spectrum_t phase_gains**

The complex factors to apply to achieve the necessary phase shift.

Private Attributes

- unsigned **last_complex_bin**

index of the last complex fft bin for the used fft length.

5.366.1 Detailed Description

implements subsample delay in spectral domain.

When transformed back to the time domain, the signal is delayed by the configured fraction of a sample. This operation must not be used in a smoothgains bracket.

5.366.2 Constructor & Destructor Documentation

5.366.2.1 subsample_delay_t() `MHASignal::subsample_delay_t::subsample_delay_t (const std::vector< float > & subsample_delay, unsigned fftlen)`

Constructor computes complex phase factors to apply to achieve subsample delay.

Parameters

<i>subsample_delay</i>	The subsample delay to apply. $-0.5 \leq \text{subsample_delay} \leq 0.5$
<i>fftlen</i>	FFT length

Exceptions

<i>MHA_Error</i> (p. 818)	if the parameters are out of range
---	------------------------------------

5.366.3 Member Function Documentation

5.366.3.1 process() [1/2] `void MHASignal::subsample_delay_t::process (mha_spec_t * s)`

Apply the phase_gains to s to achieve the subsample delay.

5.366.3.2 process() [2/2] `void MHASignal::subsample_delay_t::process (mha_spec_t * s, unsigned idx)`

Apply the phase gains to channel idx in s to achieve the subsample delay in channel idx.

Parameters

<code>s</code>	signal
<code>idx</code>	channel index, 0-based

Exceptions

MHA_Error (p. 818)	if <code>idx >= s->num_channels</code>
---------------------------	--

5.366.4 Member Data Documentation

5.366.4.1 phase_gains `spectrum_t MHASignal::subsample_delay_t::phase_gains`

The complex factors to apply to achieve the necessary phase shift.

5.366.4.2 last_complex_bin `unsigned MHASignal::subsample_delay_t::last_complex_bin`
[private]

index of the last complex fft bin for the used fft length.

The documentation for this class was generated from the following files:

- `mha_signal.hh`
- `mha_signal.cpp`

5.367 MHASignal::uint_vector_t Class Reference

Vector of unsigned values, used for size and index description of n-dimensional matrixes.

Inheritance diagram for MHASignal::uint_vector_t:

Public Member Functions

- **uint_vector_t** (unsigned int len)
Constructor, initializes all elements to zero.
- **uint_vector_t** (const **uint_vector_t** &)
- **uint_vector_t** (const uint8_t *buf, unsigned int len)
Construct from memory area.
- **~uint_vector_t** ()
- bool **operator==** (const **uint_vector_t** &) const
Check for equality.
- **uint_vector_t** & **operator=** (const **uint_vector_t** &)
*Assign from other **uint_vector_t** (p. 1306).*
- unsigned int **get_length** () const
Return the length of the vector.
- const uint32_t & **operator[]** (unsigned int k) const
Read-only access to elements.
- uint32_t & **operator[]** (unsigned int k)
Access to elements.
- unsigned int **numbytes** () const
Return number of bytes needed to store into memory.
- unsigned int **write** (uint8_t *buf, unsigned int len) const
Copy to memory area.
- const uint32_t * **getdata** () const
Return pointer to the data field.

Protected Attributes

- uint32_t **length**
- uint32_t * **data**

5.367.1 Detailed Description

Vector of unsigned values, used for size and index description of n-dimensional matrixes.

5.367.2 Constructor & Destructor Documentation

5.367.2.1 uint_vector_t() [1/3] MHASignal::uint_vector_t::uint_vector_t (
 unsigned int *len*)

Constructor, initializes all elements to zero.

Parameters

<i>len</i>	Length of vector.
------------	-------------------

5.367.2.2 uint_vector_t() [2/3] MHASignal::uint_vector_t::uint_vector_t (
 const **uint_vector_t** & *src*)

5.367.2.3 uint_vector_t() [3/3] MHASignal::uint_vector_t::uint_vector_t (
 const uint8_t * *buf*,
 unsigned int *len*)

Construct from memory area.

Warning

This constructor is not real time safe

5.367.2.4 `~uint_vector_t()` `MHASignal::uint_vector_t::~~uint_vector_t ()`

5.367.3 Member Function Documentation

5.367.3.1 `operator==()` `bool MHASignal::uint_vector_t::operator==(const uint_vector_t & src) const`

Check for equality.

5.367.3.2 `operator=()` `uint_vector_t & MHASignal::uint_vector_t::operator=(const uint_vector_t & src)`

Assign from other `uint_vector_t` (p. 1306).

Warning

This assignment will fail if the lengths mismatch.

5.367.3.3 `get_length()` `unsigned int MHASignal::uint_vector_t::get_length () const [inline]`

Return the length of the vector.

5.367.3.4 `operator[]()` `[1/2] const uint32_t& MHASignal::uint_vector_t::operator[] (unsigned int k) const [inline]`

Read-only access to elements.

5.367.3.5 operator[]() [2/2] `uint32_t& MHASignal::uint_vector_t::operator[] (unsigned int k) [inline]`

Access to elements.

5.367.3.6 numbytes() `unsigned int MHASignal::uint_vector_t::numbytes () const`

Return number of bytes needed to store into memory.

5.367.3.7 write() `unsigned int MHASignal::uint_vector_t::write (uint8_t * buf, unsigned int len) const`

Copy to memory area.

5.367.3.8 getdata() `const uint32_t* MHASignal::uint_vector_t::getdata () const [inline]`

Return pointer to the data field.

5.367.4 Member Data Documentation

5.367.4.1 length `uint32_t MHASignal::uint_vector_t::length [protected]`

Additional Inherited Members

5.368.1 Detailed Description

signal processing class for waveform data (based on **mha_wave_t** (p. 894))

5.368.2 Constructor & Destructor Documentation

5.368.2.1 waveform_t() [1/5] `waveform_t::waveform_t (`
`const unsigned int & frames,`
`const unsigned int & channels)`

constructor of **waveform_t** (p. 1310)

Allocates buffer memory and initializes values to zero.

Parameters

<i>frames</i>	number of frames in each channel
<i>channels</i>	number of channels

5.368.2.2 waveform_t() [2/5] `waveform_t::waveform_t (`
`const mhaconfig_t & cf) [explicit]`

Constructor to create a waveform from plugin configuration.

Parameters

<i>cf</i>	Plugin configuration
-----------	----------------------

5.368.2.3 waveform_t() [3/5] waveform_t::waveform_t (
const mha_wave_t & src) [explicit]

Copy constructor for mha_wave_t (p. 894) source.

5.368.2.4 waveform_t() [4/5] waveform_t::waveform_t (
const MHASignal::waveform_t & src)

Copy constructor.

5.368.2.5 waveform_t() [5/5] waveform_t::waveform_t (
const std::vector< mha_real_t > & src)

Copy constructor for std::vector<mha_real_t> source.

A waveform structure with a single channel is created, the length is equal to the number of elements in the source vector.

5.368.2.6 ~waveform_t() waveform_t::~~waveform_t (
void) [virtual]

Reimplemented in MHA_AC::waveform_t (p. 794).

5.368.3 Member Function Documentation

5.368.3.1 flatten() std::vector< mha_real_t > waveform_t::flatten () const

5.368.3.2 operator std::vector< mha_real_t >() MHASignal::waveform_t::operator std::vector< mha_real_t > () const [explicit]

5.368.3.3 operator=() void MHASignal::waveform_t::operator= (const mha_real_t & v) [inline]

5.368.3.4 operator[]() [1/2] mha_real_t& MHASignal::waveform_t::operator[] (unsigned int k) [inline]

5.368.3.5 operator[]() [2/2] const mha_real_t& MHASignal::waveform_t::operator[] (unsigned int k) const [inline]

5.368.3.6 value() [1/2] mha_real_t& MHASignal::waveform_t::value (unsigned int t, unsigned int ch) [inline]

Element accessor.

Parameters

<i>t</i>	Frame number
<i>ch</i>	Channel number

Returns

Reference to element

5.368.3.7 operator()() [1/2] mha_real_t& MHASignal::waveform_t::operator() (unsigned int t, unsigned int ch) [inline]

Element accessor.

Parameters

<i>t</i>	Frame number
<i>ch</i>	Channel number

Returns

Reference to element

5.368.3.8 value() [2/2] `const mha_real_t& MHASignal::waveform_t::value (unsigned int t, unsigned int ch) const [inline]`

Constant element accessor.

Parameters

<i>t</i>	Frame number
<i>ch</i>	Channel number

Returns

Reference to element

5.368.3.9 operator()() [2/2] `const mha_real_t& MHASignal::waveform_t::operator() (unsigned int t, unsigned int ch) const [inline]`

Constant element accessor.

Parameters

<i>t</i>	Frame number
<i>ch</i>	Channel number

Returns

Reference to element

5.368.3.10 sum() [1/3] `mha_real_t waveform_t::sum (`
`const unsigned int & a,`
`const unsigned int & b)`

sum of all elements between [a,b) in all channels

Parameters

<i>a</i>	starting frame
<i>b</i>	end frame (excluded)

Returns

sum

5.368.3.11 sum() [2/3] `mha_real_t waveform_t::sum (`
`const unsigned int & a,`
`const unsigned int & b,`
`const unsigned int & ch)`

sum of all elements between [a,b) in channel ch

Parameters

<i>a</i>	starting frame
<i>b</i>	end frame (excluded)
<i>ch</i>	channel number

Returns

sum

5.368.3.12 sum() [3/3] `mha_real_t waveform_t::sum ()`

sum of all elements

Returns

sum of all elements

5.368.3.13 sumsqr() `mha_real_t waveform_t::sumsqr ()`

sum of square of all elements

Returns

sum of square of all elements

5.368.3.14 sum_channel() `mha_real_t waveform_t::sum_channel (const unsigned int & ch)`

return sum of all elements in one channel

Parameters

<i>ch</i>	channel number
-----------	----------------

Returns

sum

5.368.3.15 assign() [1/2] `void waveform_t::assign (const unsigned int & k, const unsigned int & ch, const mha_real_t & val)`

set frame "k" in channel "ch" to value "val"

Parameters

<i>k</i>	frame number
<i>ch</i>	channel number
<i>val</i>	new value

5.368.3.16 assign() [2/2] `void waveform_t::assign (`
`const mha_real_t & val)`

set all elements to value

Parameters

<i>val</i>	new value
------------	-----------

5.368.3.17 assign_frame() `void waveform_t::assign_frame (`
`const unsigned int & k,`
`const mha_real_t & val)`

assign value "val" to frame k in all channels

Parameters

<i>k</i>	frame number
<i>val</i>	new value

5.368.3.18 assign_channel() `void waveform_t::assign_channel (`
`const unsigned int & ch,`
`const mha_real_t & val)`

assign value "val" to channel ch in all frames

Parameters

<i>ch</i>	channel number
<i>val</i>	new value

5.368.3.19 copy() [1/3] `void waveform_t::copy (`
`const std::vector< mha_real_t > & v)`

5.368.3.20 copy() [2/3] `void waveform_t::copy (`
`const mha_wave_t & src)`

copy data from source into current waveform

Parameters

<i>src</i>	input data (need to be same size as target)
------------	---

5.368.3.21 copy() [3/3] `void waveform_t::copy (`
`const mha_wave_t * src)`

5.368.3.22 copy_channel() `void waveform_t::copy_channel (`
`const mha_wave_t & src,`
`unsigned int src_channel,`
`unsigned int dest_channel)`

Copy one channel of a given waveform signal to a target channel.

Parameters

<i>src</i>	Input waveform signal
<i>src_channel</i>	Channel in source signal
<i>dest_channel</i>	Channel number in destination signal

5.368.3.23 copy_from_at() `void waveform_t::copy_from_at (`
`unsigned int to_pos,`
`unsigned int len,`
`const mha_wave_t & src,`
`unsigned int from_pos)`

Copy part of the source signal into part of this waveform object.

Source and target have to have the same number of channels.

Parameters

<i>to_pos</i>	Offset in target
<i>len</i>	Number of frames copied
<i>src</i>	Source
<i>from_pos</i>	Offset in source

5.368.3.24 export_to() `void waveform_t::export_to (mha_wave_t & dest)`

copy data into allocated **mha_wave_t** (p. 894) structure

Parameters

<i>dest</i>	destination structure
-------------	-----------------------

5.368.3.25 limit() `void waveform_t::limit (const mha_real_t & min, const mha_real_t & max)`

limit target to range [min,max]

Parameters

<i>min</i>	lower limit
<i>max</i>	upper limit

5.368.3.26 power() `void waveform_t::power (const waveform_t & src)`

transform waveform signal (in Pa) to squared signal (in W/m²)

Parameters

<i>src</i>	linear waveform signal (in Pa)
------------	--------------------------------

5.368.3.27 powspec() `void waveform_t::powspec (`
`const mha_spec_t & src)`

get the power spectrum (in W/m²) from a complex spectrum

Parameters

<i>src</i>	complex spectrum (normalized to Pa)
------------	-------------------------------------

5.368.3.28 scale() [1/2] `void waveform_t::scale (`
`const unsigned int & a,`
`const unsigned int & b,`
`const unsigned int & ch,`
`const mha_real_t & val)`

scale section [a,b) in channel "ch" by "val"

Parameters

<i>a</i>	starting frame
<i>b</i>	end frame (excluded)
<i>ch</i>	channel number
<i>val</i>	scale factor

5.368.3.29 scale() [2/2] `void waveform_t::scale (`
`const unsigned int & k,`
`const unsigned int & ch,`
`const mha_real_t & val)`

scale one element

Parameters

<i>k</i>	frame number
<i>ch</i>	channel number
<i>val</i>	scale factor

5.368.3.30 scale_channel() `void waveform_t::scale_channel (`
`const unsigned int & ch,`
`const mha_real_t & src)`

scale one channel of target with a scalar

Parameters

<i>ch</i>	channel number
<i>src</i>	factor

5.368.3.31 scale_frame() `void waveform_t::scale_frame (`
`const unsigned int & frame,`
`const mha_real_t & val)`

5.368.3.32 get_size() `unsigned int MHA_Signal::waveform_t::get_size () const [inline]`

5.371.1 Detailed Description

Class for interpolation with equidistant x values.

This class can be used for linear interpolation tasks where the mesh points are known for equidistant x values.

Before the class can be used for interpolation, it has to be filled with the y values for the mesh points, the x range has to be specified, and when all values are given, the prepare method has to be called so that the object can determine the distance between x values from the range and the number of mesh points given.

Only after prepare has returned, the object may be used for interpolation.

5.371.2 Constructor & Destructor Documentation

5.371.2.1 linear_table_t() `linear_table_t::linear_table_t (void)`

constructor creates an empty **linear_table_t** (p. 1325) object.

`add_entry`, `set_xmin`, `set_xmax` and `prepare` methods have to be called before the object can be used to lookup and interpolate values.

5.371.2.2 ~linear_table_t() `linear_table_t::~~linear_table_t (void)`

destructor

5.371.3 Member Function Documentation

5.371.3.1 lookup() `mha_real_t linear_table_t::lookup (mha_real_t x) const [virtual]`

look up the y value that is stored for the mesh point where x is lower than or equal to the x value given here.

This method does not extrapolate, so for $x < x_{\min}$, the y value for x_{\min} is returned. For all x greater than the x of the last mesh point, the y value of the last mesh point is returned.

Precondition

`prepare` must have been called before `lookup` may be called.

Implements **MHATableLookup::table_t** (p. 1331).

5.371.3.2 interp() `mha_real_t linear_table_t::interp (`
`mha_real_t x) const [virtual]`

interpolate y value for the given x value.

The y values for the neighbouring mesh points are looked up and linearly interpolated. For x values outside the range of mesh points, the y value is extrapolated from the nearest two mesh points.

Precondition

prepare must have been called before interp may be called.

Implements **MHATableLookup::table_t** (p. 1331).

5.371.3.3 set_xmin() `void linear_table_t::set_xmin (`
`mha_real_t xmin)`

set the x value for the first mesh point.

Must be called before prepare can be called.

5.371.3.4 add_entry() `void linear_table_t::add_entry (`
`mha_real_t y)`

set the y value for the next mesh point.

Must be called at least twice before prepare can be called.

5.371.3.5 set_xmax() `void linear_table_t::set_xmax (`
`mha_real_t xmax)`

this sets the x value for a past-the-end, not added mesh point.

Example:

```
t.set_xmin(100);
t.add_entry(0); // mesh point {100,0}
t.add_entry(1); // mesh point {110,1}
// the next mesh point would be at x=120, but we do not add this
t.set_xmax(120); // the x where the next mesh point would be
t.prepare();
```

now, `t.interp(100) == 0`; `t.interp(110) == 1`; `t.interp(105) == 0.5`;

5.371.3.6 prepare() `void linear_table_t::prepare (void)`

prepare computes the x distance of the mesh points based on the values given to set_xmin, set_xmax, and the number of times that add_entry was called.

Precondition

set_xmin, set_xmax, add_entry functions must have been called before calling prepare, add_entry must have been called at least twice.

Only after this method has been called, interp or lookup may be called.

5.371.3.7 clear() `void linear_table_t::clear (void) [virtual]`

clear resets the state of this object to the state directly after construction.

mesh entries and x range are deleted.

interp and lookup may not be called after this function has been called unless prepare and before that its precondition methods are called again.

Implements **MHATableLookup::table_t** (p. 1331).

5.373 MHATableLookup::xy_table_t Class Reference

Class for interpolation with non-equidistant x values.

Inheritance diagram for MHATableLookup::xy_table_t:

Public Member Functions

- **xy_table_t ()**
- **mha_real_t lookup (mha_real_t x) const**
Return the y-value at the position of the nearest x value below input.
- **mha_real_t interp (mha_real_t x) const**
Linear interpolation function.
- **void add_entry (mha_real_t x, mha_real_t y)**
Add a single x-y pair entry.
- **void add_entry (mha_real_t *pVX, mha_real_t *pVY, unsigned int len)**

Add multiple entries at once.

- void **clear** ()
Clear the table and transformation functions.
- void **set_xfun** (float(*pXFun)(float))
Set transformation function for x values.
- void **set_yfun** (float(*pYFun)(float))
Set transformation function for y values during insertion.
- void **set_xyfun** (float(*pYFun)(float, float))
Set transformation function for y values during insertion, based on x and y values.
- std::pair< **mha_real_t**, **mha_real_t** > **get_xlimits** () const
returns the min and max x of all mesh points that are stored in the lookup table, i.e.

Private Attributes

- float(* **xyfun**)(float, float)

Additional Inherited Members

5.373.1 Detailed Description

Class for interpolation with non-equidistant x values.

Linear interpolation of the x-y table is performed. A transformation of x and y-values is possible; if a transformation function is provided for the x-values, the same function is applied to the argument of **xy_table_t::interp()** (p. 1334) and **xy_table_t::lookup()** (p. 1333). The transformation of y values is applied only during insertion into the table. Two functions for y-transformation can be provided: a simple transformation which depends only on the y values, or a transformation which takes both (non-transformed) x and y value as an argument. The two-argument transformation is applied before the one-argument transformation.

5.373.2 Constructor & Destructor Documentation

5.373.2.1 **xy_table_t()** `xy_table_t::xy_table_t ()`

5.373.3 Member Function Documentation

5.373.3.1 **lookup()** `mha_real_t xy_table_t::lookup (mha_real_t x) const [virtual]`

Return the y-value at the position of the nearest x value below input.

Parameters

x	Input value
---	-------------

Returns

y value at nearest x value below input.

Implements **MHATableLookup::table_t** (p. 1331).

5.373.3.2 interp() `mha_real_t xy_table_t::interp (`
`mha_real_t x) const [virtual]`

Linear interpolation function.

Parameters

x	x value
---	---------

Returns

interpolated y value

Implements **MHATableLookup::table_t** (p. 1331).

5.373.3.3 add_entry() [1/2] `void xy_table_t::add_entry (`
`mha_real_t x,`
`mha_real_t y)`

Add a single x-y pair entry.

Parameters

x	x value
y	corresponding y value

5.373.3.4 add_entry() [2/2] `void xy_table_t::add_entry (`
`mha_real_t * pVX,`
`mha_real_t * pVY,`
`unsigned int uLength)`

Add multiple entries at once.

Parameters

<i>pVX</i>	array of x values
<i>pVY</i>	array of y values
<i>uLength</i>	Length of x and y arrays

5.373.3.5 clear() `void xy_table_t::clear () [virtual]`

Clear the table and transformation functions.

Implements **MHATableLookup::table_t** (p. 1331).

5.373.3.6 set_xfun() `void xy_table_t::set_xfun (`
`float(*) (float) fun)`

Set transformation function for x values.

Parameters

<i>fun</i>	Transformation function.
------------	--------------------------

5.373.3.7 set_yfun() `void xy_table_t::set_yfun (`
`float(*) (float) fun)`

Set transformation function for y values during insertion.

Parameters

<i>fun</i>	Transformation function.
------------	--------------------------

5.373.3.8 set_xyfun() `void xy_table_t::set_xyfun (float(*) (float, float) fun)`

Set transformation function for y values during insertion, based on x and y values.

Parameters

<i>fun</i>	Transformation function.
------------	--------------------------

5.373.3.9 get_xlimits() `std::pair< mha_real_t, mha_real_t> MHATableLookup::xy_↔
table_t::get_xlimits () const [inline]`

returns the min and max x of all mesh points that are stored in the lookup table, i.e.

after transformation with xfun, if any. Not real-time safe

5.373.4 Member Data Documentation

5.373.4.1 mXY `std::map< mha_real_t, mha_real_t> MHATableLookup::xy_table_t::mXY
[private]`

5.373.4.2 xfun `float (* MHATableLookup::xy_table_t::xfun) (float) [private]`

5.374 MHAWindow::bartlett_t Class Reference

Bartlett window.

Inheritance diagram for MHAWindow::bartlett_t:

Public Member Functions

- `bartlett_t` (unsigned int n)

Additional Inherited Members

5.374.1 Detailed Description

Bartlett window.

5.374.2 Constructor & Destructor Documentation

5.374.2.1 `bartlett_t()` `MHAWindow::bartlett_t::bartlett_t (unsigned int n) [inline]`

The documentation for this class was generated from the following file:

- `mha_windowparser.h`

5.375 MHAWindow::base_t Class Reference

Common base for window types.

Inheritance diagram for `MHAWindow::base_t`:

Public Member Functions

- `base_t (unsigned int len)`
Constructor.
- `base_t (const MHAWindow::base_t &src)`
Copy constructor.
- `void operator() (mha_wave_t &) const`
Apply window to waveform segment (reference)
- `void operator() (mha_wave_t *) const`
Apply window to waveform segment (pointer)
- `void ramp_begin (mha_wave_t &) const`
Apply a ramp at the beginning.
- `void ramp_end (mha_wave_t &) const`
Apply a ramp at the end.

Additional Inherited Members

5.375.1 Detailed Description

Common base for window types.

5.375.2 Constructor & Destructor Documentation

5.375.2.1 base_t() [1/2] MHAWindow::base_t::base_t (
unsigned int *len*)

Constructor.

Parameters

<i>len</i>	Window length in samples.
------------	---------------------------

5.375.2.2 base_t() [2/2] MHAWindow::base_t::base_t (
const MHAWindow::base_t & *src*)

Copy constructor.

Parameters

<i>src</i>	Source to be copied
------------	---------------------

5.375.3 Member Function Documentation

5.375.3.1 operator()() [1/2] void MHAWindow::base_t::operator() (
mha_wave_t & *s*) const

Apply window to waveform segment (reference)

5.375.3.2 operator() [2/2] `void MHAWindow::base_t::operator() (mha_wave_t * s) const`

Apply window to waveform segment (pointer)

5.375.3.3 ramp_begin() `void MHAWindow::base_t::ramp_begin (mha_wave_t & s) const`

Apply a ramp at the beginning.

5.375.3.4 ramp_end() `void MHAWindow::base_t::ramp_end (mha_wave_t & s) const`

Apply a ramp at the end.

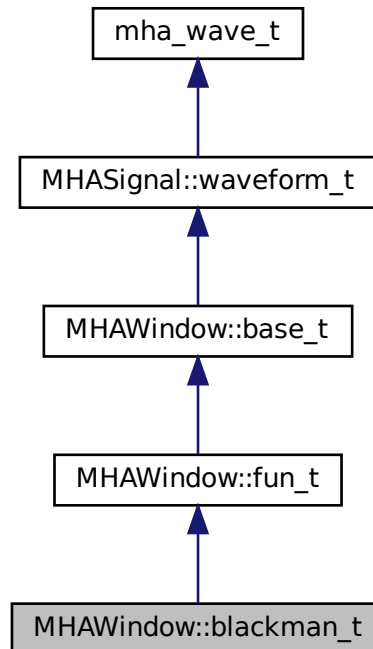

The documentation for this class was generated from the following files:

- **mha_windowparser.h**
- **mha_windowparser.cpp**

5.376 MHAWindow::blackman_t Class Reference

Blackman window.

Inheritance diagram for MHAWindow::blackman_t:

Public Member Functions

- `blackman_t` (unsigned int n)

Additional Inherited Members

5.376.1 Detailed Description

Blackman window.

5.376.2 Constructor & Destructor Documentation

5.376.2.1 blackman_t() `MHAWindow::blackman_t::blackman_t (unsigned int n) [inline]`

The documentation for this class was generated from the following file:

- `mha_windowparser.h`

5.377 MHAWindow::fun_t Class Reference

Generic window based on a generator function.

Inheritance diagram for `MHAWindow::fun_t`:

Public Member Functions

- **fun_t** (`unsigned int n`, `float(*fun)(float)`, `float xmin=-1`, `float xmax=1`, `bool min_included=true`, `bool max_included=false`)
Constructor.

Additional Inherited Members

5.377.1 Detailed Description

Generic window based on a generator function.

The generator function should return a valid window function in the interval $[-1, 1[$.

5.377.2 Constructor & Destructor Documentation

5.377.2.1 fun_t() `MHAWindow::fun_t::fun_t (unsigned int n, float(*) (float) fun, float xmin = -1, float xmax = 1, bool min_included = true, bool max_included = false)`

Constructor.

Parameters

<i>n</i>	Window length
<i>fun</i>	Generator function, i.e. MHAWindow::hanning() (p. 156)
<i>xmin</i>	Start value of window, i.e. -1 for full window or 0 for fade-out ramp.
<i>xmax</i>	Last value of window, i.e. 1 for full window
<i>min_included</i>	Flag if minimum value is included
<i>max_included</i>	Flag if maximum value is included

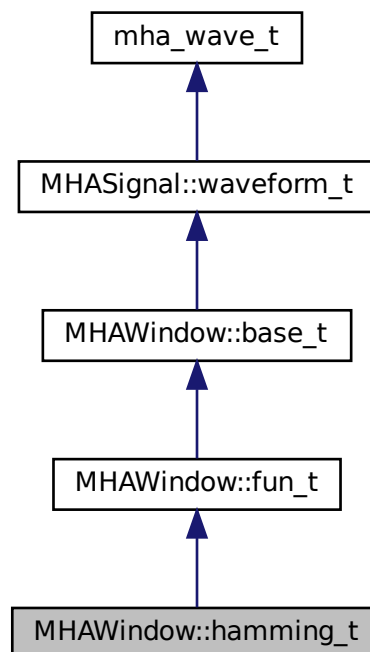

The documentation for this class was generated from the following files:

- [mha_windowparser.h](#)
- [mha_windowparser.cpp](#)

5.378 MHAWindow::hamming_t Class Reference

Hamming window.

Inheritance diagram for MHAWindow::hamming_t:

Public Member Functions

- **hamming_t** (unsigned int n)

Additional Inherited Members

5.378.1 Detailed Description

Hamming window.

5.378.2 Constructor & Destructor Documentation

5.378.2.1 hamming_t() `MHAWindow::hamming_t::hamming_t (unsigned int n) [inline]`

The documentation for this class was generated from the following file:

- **mha_windowparser.h**

5.379 MHAWindow::hanning_t Class Reference

von-Hann window

Inheritance diagram for MHAWindow::hanning_t:

Public Member Functions

- `hanning_t` (unsigned int n)

Additional Inherited Members

5.379.1 Detailed Description

von-Hann window

5.379.2 Constructor & Destructor Documentation

5.379.2.1 hanning_t() `MHAWindow::hanning_t::hanning_t (unsigned int n) [inline]`

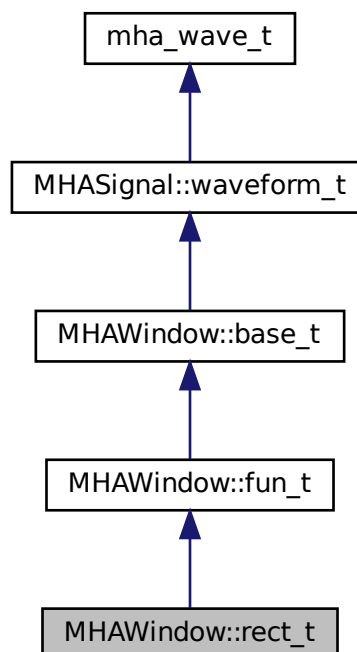

The documentation for this class was generated from the following file:

- `mha_windowparser.h`

5.380 MHAWindow::rect_t Class Reference

Rectangular window.

Inheritance diagram for `MHAWindow::rect_t`:

Public Member Functions

- `rect_t` (unsigned int n)

Additional Inherited Members

5.380.1 Detailed Description

Rectangular window.

5.380.2 Constructor & Destructor Documentation

5.380.2.1 `rect_t()` `MHAWindow::rect_t::rect_t (unsigned int n) [inline]`

The documentation for this class was generated from the following file:

- `mha_windowparser.h`

5.381 MHAWindow::user_t Class Reference

User defined window.

Inheritance diagram for `MHAWindow::user_t`:

Public Member Functions

- `user_t (const std::vector< mha_real_t > &wnd)`
Constructor.

Additional Inherited Members

5.381.1 Detailed Description

User defined window.

5.381.2 Constructor & Destructor Documentation

5.381.2.1 user_t() `MHAWindow::user_t::user_t (const std::vector< mha_real_t > & wnd)`

Constructor.

Parameters

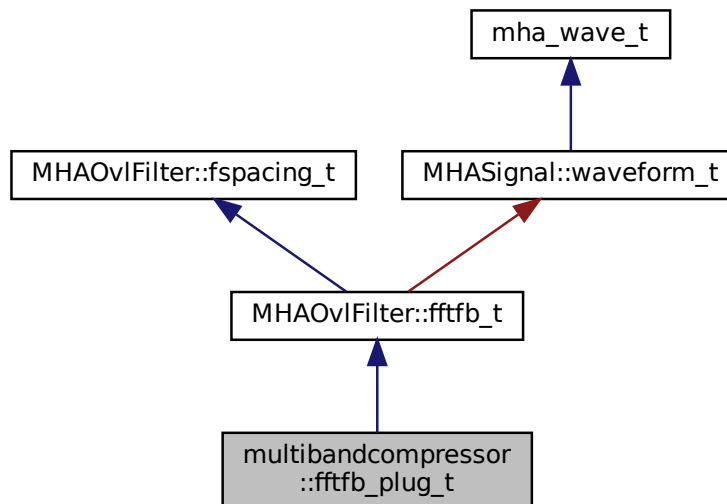

<i>wnd</i>	User defined window
------------	---------------------

The documentation for this class was generated from the following files:

- `mha_windowparser.h`
- `mha_windowparser.cpp`

5.382 multibandcompressor::fftfb_plug_t Class Reference

Inheritance diagram for multibandcompressor::fftfb_plug_t:

Public Member Functions

- **fftfb_plug_t** (**MHAOvfFilter::fftfb_vars_t** &, const **mhaconfig_t** &cfg, **MHA_AC**↔

5.391 `osc_variable_t` Class Reference

Class for converting messages received at a single osc address to a single AC variable.

Public Member Functions

- `osc_variable_t` (const `osc_variable_t` &)=delete
An instance of this class cannot safely be copied.
- `osc_variable_t` (const std::string &name, unsigned int size, `MHA_AC::algo_comm_t` &hAC, lo_server_thread lost)
Constructor.
- void `sync_osc2ac` ()
Copies the latest OSC data from the OSC storage to the AC storage.
- void `ac_insert` ()
Insert/Re-insert the AC variable into AC space.
- int `handler` (const char *types, lo_arg **argv, int argc)
Callback function called by network thread managed by liblo when a new OSC message has been received.

Static Public Member Functions

- static int `handler` (const char *path, const char *types, lo_arg **argv, int argc, lo_message msg, void *user_data)
Callback function called by network thread managed by liblo when a new OSC message has been received.

Private Attributes

- `std::string` **acname**
Name of the ac variable.
- `std::string` **oscaddr**
OSC address.
- **MHA_AC::waveform_t** **ac_data**
AC variable storage.
- **MHASignal::waveform_t** **osc_data**
OSC variable storage.
- `std::string` **name_**
Name of AC variable and OSC address without the initial slash.

5.391.1 Detailed Description

Class for converting messages received at a single osc address to a single AC variable.

OSC variables are received asynchronously in a network thread and must not modify their AC variables directly, because MHA plugins may only access their AC variables while executing their prepare, release, or process callbacks.

One osc2ac plugin uses multiple instances of **osc_variable_t** (p. 1373), one for each mapping of an OSC address to an AC variable.

5.391.2 Constructor & Destructor Documentation

5.391.2.1 **osc_variable_t()** [1/2] `osc_variable_t::osc_variable_t (const osc_variable_t &) [delete]`

An instance of this class cannot safely be copied.

5.391.2.2 **osc_variable_t()** [2/2] `osc_variable_t::osc_variable_t (const std::string & name, unsigned int size, MHA_AC::algo_comm_t & hAC, lo_server_thread lost)`

Constructor.

Allocates memory.

Parameters

<i>name</i>	The name of the AC variable that stores the latest value.
<i>size</i>	Number of elements to copy from OSC message to AC variable.
<i>hAC</i>	Handle of Algorithm Communication Variable space.
<i>lost</i>	libLO Server Thread.

5.391.3 Member Function Documentation

5.391.3.1 `sync_osc2ac()` `void osc_variable_t::sync_osc2ac () [inline]`

Copies the latest OSC data from the OSC storage to the AC storage.

To be executed during process callback of `osc2ac` plugin.

5.391.3.2 `ac_insert()` `void osc_variable_t::ac_insert () [inline]`

Insert/Re-insert the AC variable into AC space.

Should be done in each process callback.

5.391.3.3 `handler()` [1/2] `int osc_variable_t::handler (`

```

    const char * path,
    const char * types,
    lo_arg ** argv,
    int argc,
    lo_message msg,
    void * user_data ) [static]
```

Callback function called by network thread managed by liblo when a new OSC message has been received.

This static method forwards to the instance method by casting `user_data` to `osc_variable_t*`.

Parameters

<i>path</i>	Unused.
<i>types</i>	The OSC data type indicator of the received message.
<i>argv</i>	Array of received OSC data.
<i>argc</i>	Number of elements in array of received OSC data.
<i>msg</i>	Unused.
<i>user_data</i>	Pointer to <code>osc_variable_t</code> (p. 1373) instance.

Returns

1 if the message was accepted, 0 if not.

```
5.391.3.4 handler() [2/2] int osc_variable_t::handler (
    const char * types,
    lo_arg ** argv,
    int argc )
```

Callback function called by network thread managed by liblo when a new OSC message has been received.

This instance method checks if the received data is of expected length and contains only floats, and if yes, copies the data into the buffer `osc_data` where the latest received data for this osc address is stored until it is either overwritten by the next data for the same osc address or copied to an AC variable.

Parameters

<i>types</i>	The OSC data type indicator of the received message.
<i>argv</i>	Array of received OSC data.
<i>argc</i>	Number of elements in array of received OSC data.

Returns

1 if the message had correct length and contained only floats, 0 if not.

5.391.4 Member Data Documentation

```
5.391.4.1 acname std::string osc_variable_t::acname [private]
```

Name of the ac variable.

```
5.391.4.2 oscaddr std::string osc_variable_t::oscaddr [private]
```

OSC address.

5.391.4.3 ac_data `MHA_AC::waveform_t osc_variable_t::ac_data [private]`

AC variable storage.

5.391.4.4 osc_data `MHASignal::waveform_t osc_variable_t::osc_data [private]`

OSC variable storage.

5.391.4.5 name_ `std::string osc_variable_t::name_ [private]`

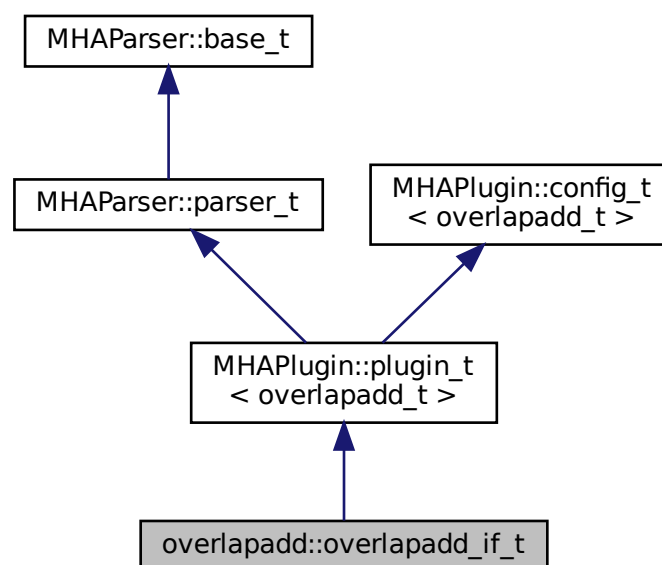

Name of AC variable and OSC address without the initial slash.

5.403 pluginlib_t Class Reference

Specialisation of `dynamiclib_t` (p. 466) for mha plugin libraries.

Inheritance diagram for `pluginlib_t`:

Public Member Functions

- `pluginlib_t` (const std::string &name_)
C'tor of the wrapper class.
- virtual void * **resolve** (const std::string &name_) override
Resolves the plugin callback specified by name_, e.g.
- virtual ~`pluginlib_t` ()
D'tor.

Additional Inherited Members

5.403.1 Detailed Description

Specialisation of `dynamiclib_t` (p. 466) for mha plugin libraries.

5.403.2 Constructor & Destructor Documentation

5.403.2.1 pluginlib_t() `pluginlib_t::pluginlib_t (const std::string & name_) [explicit]`

C'tor of the wrapper class.

Takes a the the file name of a shared library w/o the suffix as argument, searches for the library in the system-dependent standard paths for libraries and in MHA_LIBRARY_DIR. Calls load_lib for the actual work.

Parameters

<i>name_</i>	File name of the shared library, without suffix
--------------	---

5.403.2.2 ~pluginlib_t() `pluginlib_t::~~pluginlib_t () [virtual]`

D'tor.

5.403.3 Member Function Documentation

5.403.3.1 resolve() `void * pluginlib_t::resolve (const std::string & name_) [override], [virtual]`

Resolves the plugin callback specified by name_, e.g.

'process', 'prepare', etc... and returns a pointer to it or a nullptr if the function was not found. Automatically adds the required prefixes and suffixes for dynamically/statically compiled mha plugins

Parameters

<i>name_</i>	Name of the function to be resolved
--------------	-------------------------------------

Returns

Pointer to the function

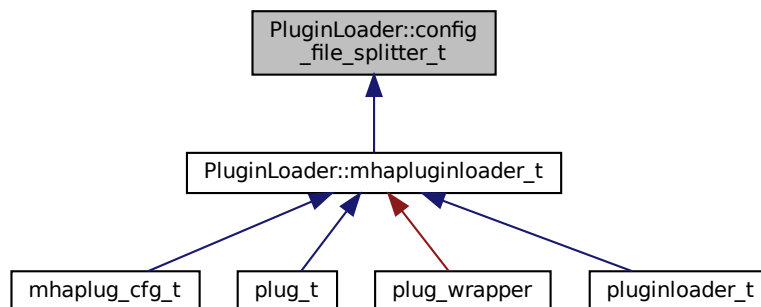

Reimplemented from **dynamiclib_t** (p. 468).

The documentation for this class was generated from the following files:

Prepares the processor for signal processing.
- virtual void **release** ()=0
Resources allocated for signal processing in `fourway_processor_t::prepare` (p. 1416) are released here in `fourway_processor_t::release` (p. 1416).
- virtual std::string **parse** (const std::string &query)=0
Parser interface.
- virtual ~**fourway_processor_t** ()
Classes with virtual methods need virtual destructor.

5.405.1 Detailed Description

This abstract class defines the interface for classes that implement all types of signal domain processing supported by the MHA: wave2wave, spec2spec, wave2spec, and spec2wave.

For supporting different output domains for the same input domain, the processing methods are overloaded with respect to input domain and output domain.

5.405.2 Constructor & Destructor Documentation

5.405.2.1 ~**fourway_processor_t**() virtual PluginLoader::fourway_processor_t::~fourway_processor_t () [inline], [virtual]

Classes with virtual methods need virtual destructor.

This destructor is empty.

5.405.3 Member Function Documentation

5.405.3.1 **process**() [1/4] virtual void PluginLoader::fourway_processor_t::process (*mha_wave_t* * s_in, *mha_wave_t* ** s_out) [pure virtual]

Pure waveform processing.

Parameters

<i>s_in</i>	input waveform signal
<i>s_out</i>	output waveform signal

Implemented in **PluginLoader::mhapluginloader_t** (p. 1420).

5.405.3.2 process() [2/4] virtual void PluginLoader::fourway_processor_t::process (
 mha_spec_t * s_in,
 mha_spec_t ** s_out) [pure virtual]

Pure spectrum processing.

Parameters

<i>s_in</i>	input spectrum signal
<i>s_out</i>	output spectrum signal

Implemented in **PluginLoader::mhapluginloader_t** (p. 1420).

5.405.3.3 process() [3/4] virtual void PluginLoader::fourway_processor_t::process (
 mha_wave_t * s_in,
 mha_spec_t ** s_out) [pure virtual]

Signal processing with domain transformation from waveform to spectrum.

Parameters

<i>s_in</i>	input waveform signal
<i>s_out</i>	output spectrum signal

Implemented in **PluginLoader::mhapluginloader_t** (p. 1420).

5.405.3.4 process() [4/4] virtual void PluginLoader::fourway_processor_t::process (
 mha_spec_t * s_in,
 mha_wave_t ** s_out) [pure virtual]

Signal processing with domain transformation from spectrum to waveform.

Parameters

<i>s_in</i>	input spectrum signal
<i>s_out</i>	output waveform signal

Implemented in **PluginLoader::mhapluginloader_t** (p. 1421).

5.405.3.5 prepare() `virtual void PluginLoader::fourway_processor_t::prepare (mhaconfig_t & settings) [pure virtual]`

Prepares the processor for signal processing.

Parameters

<i>settings</i>	domain and dimensions of the signal. The contents of settings may be modified by the prepare implementation. Upon calling fourway_processor_t::prepare (p. 1416), settings reflects domain and dimensions of the input signal. When fourway_processor_t::prepare (p. 1416) returns, settings reflects domain and dimensions of the output signal.
-----------------	---

Implemented in **plug_t** (p. 1397), **PluginLoader::mhapluginloader_t** (p. 1420), and **mhaplug_cfg_t** (p. 1190).

5.405.3.6 release() `virtual void PluginLoader::fourway_processor_t::release () [pure virtual]`

Resources allocated for signal processing in **fourway_processor_t::prepare** (p. 1416) are released here in **fourway_processor_t::release** (p. 1416).

Implemented in **plug_t** (p. 1397), **PluginLoader::mhapluginloader_t** (p. 1420), and **mhaplug_cfg_t** (p. 1190).

5.405.3.7 parse() `virtual std::string PluginLoader::fourway_processor_t::parse (const std::string & query) [pure virtual]`

Parser interface.

Implemented in **PluginLoader::mhapluginloader_t** (p. 1419), and **plug_wrapper** (p. 1399).

The documentation for this class was generated from the following file:

- **mhapluginloader.h**

5.406.1 Constructor & Destructor Documentation

5.406.1.1 `mhapluginloader_t()` `PluginLoader::mhapluginloader_t::mhapluginloader_t (`
`MHA_AC::algo_comm_t & iac,`
`const std::string & libname,`
`bool check_version = true)`

Loads and initializes mha plugin and establishes interface.

Parameters

<code>iac</code>	AC space (algorithm communication variables)
<code>libname</code>	Either file name of MHA plugin without platform-specific extension (i.e. "identity" for "identity.so" or "identity.dll") to be found on the MHA_LIBRARY_PATH (which is an environment variable). Or the same file name without extension followed by a colon ":" followed by the "configuration name" of the MHA plugin, which may be used to differentiate between multiple identical MHA plugins or to give the plugin a self-documenting name that fits its purpose. The library name - configuration name expression can be followed by a "<" followed by a configuration file name, which will be read after initialization of the plugin.

Example: "overlapadd:agc<compression.cfg" will load the plugin "overlapadd.so" or "overlapadd.dll", insert it as the configuration node "agc", and reads the configuration file "compression.cfg" into that node.

Parameters

<i>check_version</i>	Pluginloader will not check that the plugin was built using a known compatible MHA version if this flag is set to false. Disabling version check is discouraged.

5.408.1 Detailed Description

Plugin interface class of plugin acrec.

5.408.2 Constructor & Destructor Documentation

5.408.2.1 acrec_t() `acrec_t::acrec_t (`
 `MHA_AC::algo_comm_t & iac,`
 `const std::string & configured_name)`

Plugin interface constructor.

Parameters

<i>iac</i>	Algorithm communication variable space.
------------	---

5.408.3 Member Function Documentation

5.408.3.1 process() `template<class mha_signal_t >`
`mha_signal_t * acrec_t::process (`
`mha_signal_t * s)`

Process callback.

Pushes the data from one AC variable into the fifo.

Returns

the unmodified input signal.

Parameters

<code>s</code>	input signal. The audio signal is not used or modified.
----------------	---

5.408.3.2 prepare() `void acrec_t::prepare (`
`mhaconfig_t & cf) [virtual]`

Prepare callback.

acrec does not modify the signal parameters.

Parameters

<code>cf</code>	The signal parameters.
-----------------	------------------------

Implements **MHAPLugin::plugin_t< acwriter_t >** (p. [1201](#)).

5.408.3.3 release() `void acrec_t::release () [virtual]`

Ensure recorded data is flushed to disk.

Reimplemented from **MHAPLugin::plugin_t< acwriter_t >** (p. [1202](#)).

5.408.3.4 start_new_session() void acrec_t::start_new_session () [private]

Configuration callback called whenever configuration variable "record" is written to.

5.409 `plugins::hoertech::acrec::acwriter_t` Class Reference

`acwriter_t` (p. 1430) decouples signal processing from writing to disk.

Public Types

- typedef double **output_type**
The numeric data type used for outputting the data to disk.

Public Member Functions

- `acwriter_t` (bool **active**, unsigned `fifo_size`, unsigned `minwrite`, const std::string &`prefix`, bool `use_date`, const std::string & **varname**)
Constructor allocates fifo and disk output buffer.
- `~acwriter_t` ()=default
Deallocates memory but does not terminate the write_thread.
- void **process** (`MHA_AC::comm_var_t *`)
Place the data present in the algorithm communication variable into the fifo for output to disk.
- void **exit_request** ()
Terminate output thread.
- const std::string & **get_varname** () const
getter for ac variable name

Private Member Functions

- void **write_thread** ()
Main method of the disk writer thread.
- void **create_datafile** (const std::string &prefix, bool use_date)
Open data file for output.

Private Attributes

- std::atomic< bool > **close_session**
cross-thread-synchronization.
- const bool **active**
The writer thread and the output file will only be created when active is true.
- std::unique_ptr< **mha_fifo_lf_t**< **output_type** > > **fifo**
Fifo for decoupling signal processing thread from disk writer thread.
- const unsigned int **disk_write_threshold_min_num_samples**
Minimum number of samples that need to be waiting in the fifo before the disk writer thread writes them to disk.
- std::thread **writethread**
The thread that writes to disk.
- std::unique_ptr< **output_type**[]> **diskbuffer**
Intermediate buffer to receive data from fifo and store on disk.
- std::fstream **outfile**
Output file.
- unsigned **num_channels** = 0U
Number of channels of AC variable using stride.
- bool **is_num_channels_known** = false
The number of channels is determined during the first process callback.
- bool **is_complex** = false
If the AC variable is of complex valued type or not.
- const std::string **varname**
The name of the ac variable to publish.

5.409.1 Detailed Description

acwriter_t (p. 1430) decouples signal processing from writing to disk.

Data arriving in numeric AC variables is converted to data type double, placed into a fifo pipeline to transport the data from the signal processing thread to the disk writing thread, and finally written to disk in chunks of at least minwrite numbers. All numbers are written to disk as binary doubles (8 bytes) in host byte order.

5.409.2 Member Typedef Documentation

5.409.2.1 `output_type` `typedef double plugins::hoertech::acrec::acwriter_t::output←→_type`

The numeric data type used for outputting the data to disk.

5.409.3 Constructor & Destructor Documentation

5.409.3.1 `acwriter_t()` `acwriter_t::acwriter_t (` `bool active,` `unsigned fifosize,` `unsigned minwrite,` `const std::string & prefix,` `bool use_date,` `const std::string & varname)`

Constructor allocates fifo and disk output buffer.

It spawns a new thread for writing data to disk when `active==true`. In order to terminate the thread, method `exit_request` **must** be called before this object is destroyed.

Parameters

<i>active</i>	Only write data to disk when this is true.
<i>fifosize</i>	Capacity of both the fifo pipeline and of the disk buffer.
<i>minwrite</i>	Wait for a fifo fill count of at least <code>minwrite</code> doubles before flushing the contents of the fifo to disk. Fifo is also flushed before this object is destroyed.
<i>prefix</i>	Path and start of output file name. Will be extended with file name extension ".dat".
<i>use_date</i>	When true, the current date and time will be appended to the output file name before the file name extension.
<i>varname</i>	Name of AC variable to save into file. Can be accessed through getter method <code>get_varname()</code> (p. 1433). Stored here to avoid races between processing thread and configuration thread.

5.409.3.2 `~acwriter_t()` `plugins::hoertech::acrec::acwriter_t::~~acwriter_t ()` [default]

Deallocates memory but does not terminate the `write_thread`.

`write_thread` must be terminated before the destructor executes by calling `exit_request`.

5.409.4 Member Function Documentation

5.409.4.1 `process()` `void acwriter_t::process (`
`MHA_AC::comm_var_t * s)`

Place the data present in the algorithm communication variable into the fifo for output to disk.

5.409.4.2 `exit_request()` `void acwriter_t::exit_request ()`

Terminate output thread.

5.409.4.3 `get_varname()` `const std::string& plugins::hoertech::acrec::acwriter_t↔`
`::get_varname () const` [inline]

getter for ac variable name

Returns

name as `char*` as needed by `get_var`

5.409.4.4 `write_thread()` `void acwriter_t::write_thread ()` [private]

Main method of the disk writer thread.

Periodically wakes up and checks if data needs to be written to disk.

5.409.4.5 `create_datafile()` `void acwriter_t::create_datafile (`
`const std::string & prefix,`
`bool use_date)` [private]

Open data file for output.

Combine prefix, date, and file name extension

Parameters

<i>prefix</i>	Path and start of output file name. Will be extended with file name extension ".dat".
<i>use_date</i>	When true, the current date and time will be appended to the output file name before the file name extension.

5.409.5 Member Data Documentation

5.409.5.1 close_session `std::atomic<bool> plugins::hoertech::acrec::acwriter_t<↔
::close_session [private]`

cross-thread-synchronization.

write_thread() (p. 1433) terminates after this is set to true by **exit_request()** (p. 1433).

5.409.5.2 active `const bool plugins::hoertech::acrec::acwriter_t::active [private]`

The writer thread and the output file will only be created when active is true.

5.409.5.3 fifo `std::unique_ptr< mha_fifo_lf_t< output_type> > plugins::hoertech<↔
::acrec::acwriter_t::fifo [private]`

Fifo for decoupling signal processing thread from disk writer thread.

5.409.5.4 disk_write_threshold_min_num_samples `const unsigned int plugins<↔
::hoertech::acrec::acwriter_t::disk_write_threshold_min_num_samples [private]`

Minimum number of samples that need to be waiting in the fifo before the disk writer thread writes them to disk.

5.409.5.5 writethread `std::thread plugins::hoertech::acrec::acwriter_t::writethread [private]`

The thread that writes to disk.

5.409.5.6 diskbuffer `std::unique_ptr< output_type[] > plugins::hoertech::acrec::acwriter_t::diskbuffer [private]`

Intermediate buffer to receive data from fifo and store on disk.

5.409.5.7 outfile `std::fstream plugins::hoertech::acrec::acwriter_t::outfile [private]`

Output file.

5.409.5.8 num_channels `unsigned plugins::hoertech::acrec::acwriter_t::num_channels = 0U [private]`

Number of channels of AC variable using stride.

If the number of channels changes during processing, an exception is thrown.

5.409.5.9 is_num_channels_known `bool plugins::hoertech::acrec::acwriter_t::is_num_channels_known = false [private]`

The number of channels is determined during the first process callback.

`is_num_channels_known` is set to true after the first process callback.

5.409.5.10 is_complex `bool plugins::hoertech::acrec::acwriter_t::is_complex = false [private]`

If the AC variable is of complex valued type or not.

If this changes during processing, then an exception is thrown.

5.409.5.11 varname `const std::string plugins::hoertech::acrec::acwriter_t::varname`
[private]

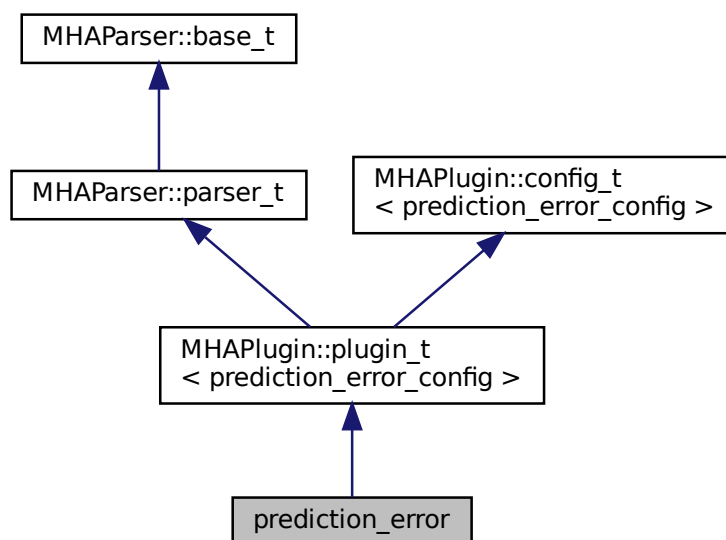

The name of the ac variable to publish.

The documentation for this class was generated from the following files:

- **acrec.hh**
- **acrec.cpp**

5.413 rmslevel::rmslevel_if_t Class Reference

Rmslevel plugin.

Inheritance diagram for `rmslevel::rmslevel_if_t`:

Public Member Functions

- **rmslevel_if_t** (**MHA_AC::algo_comm_t** &iac, const std::string &configured_name)
Constructor of rmslevel plugin.
- **mha_spec_t * process** (**mha_spec_t *s**)
Extract level from current STFT spectrum.
- **mha_wave_t * process** (**mha_wave_t *s**)
Extract level from current time signal block.
- void **prepare** (**mhaconfig_t** &signal_dimensions) override
Prepare rmslevel plugin for signal processing: Resize and reinitialize monitor variables according to number of audio channels specified in parameter, publish applicable monitor variables as AC variables (depends on signal domain).
- void **release** () override
Release removes published AC variables from AC space.

Private Member Functions

- void **update** ()
Called on write access to the configuration variable `unit`.
- void **insert_ac_variables_levels** ()
(Re-)insert AC variables for spectral processing into AC space.
- void **insert_ac_variables_peaks_and_levels** ()
(Re-)insert AC variables for waveform processing into AC space.
- void **insert_ac_variable_float_vector** (std::vector< float > &v, const std::string &ac-name)
(Re-)insert a single AC variable.
- void **remove_ac_variables** ()
Remove AC variables from AC space.

Private Attributes

- **MHAEvents::patchbay_t< rmslevel_if_t > patchbay**
Configuration language event dispatcher.
- **MHAParser::vfloat_mon_t level** = {"RMS level in W/m²"}
Sound power.
- **MHAParser::vfloat_mon_t level_db** = {"RMS level in dB"}
Sound pressure level.
- **MHAParser::vfloat_mon_t peak** = {"peak amplitude in Pa"}
Peak amplitude.
- **MHAParser::vfloat_mon_t peak_db** = {"peak amplitude in dB"}
dB value corresponding to peak amplitude.
- const std::string **level_acname**
AC variable name for `level`.
- const std::string **level_db_acname**

- AC variable name for level_db.*
- const std::string **peak_acname**
AC variable name for peak.
- const std::string **peak_db_acname**
AC variable name for peak_db.
- **MHAParser::kw_t unit**
Configuration variable for selecting result dB scale.
- std::vector< **mha_real_t** > **freq_offsets**
freq_offsets provides the conversion of dB(SPL) to dB(HL) for every frequency bin in the stft used by coloured_intensity.

Additional Inherited Members

5.413.1 Detailed Description

Rmslevel plugin.

Measures sound for each block and publishes measured result in monitor variables and AC variables.

5.413.2 Constructor & Destructor Documentation

5.413.2.1 rmslevel_if_t() `rmslevel::rmslevel_if_t::rmslevel_if_t (`
`MHA_AC::algo_comm_t & iac,`
`const std::string & configured_name)`

Constructor of rmslevel plugin.

Parameters

<i>iac</i>	Algorithm communication variable space, used to store extracted levels
<i>configured_name</i>	Configured name of this plugins: either "rmslevel" or the name explicitly given after the colon. Used as prefix for all published AC variables.

5.413.3 Member Function Documentation

5.413.3.1 process() [1/2] `mha_spec_t * rmslevel::rmslevel_if_t::process (mha_spec_t * s)`

Extract level from current STFT spectrum.

Parameters

<code>s</code>	input spectrum, not modified by this method.
----------------	--

5.413.3.2 process() [2/2] `mha_wave_t * rmslevel::rmslevel_if_t::process (mha_wave_t * s)`

Extract level from current time signal block.

Parameters

<code>s</code>	input audio block, not modified by this method.
----------------	---

5.413.3.3 prepare() `void rmslevel::rmslevel_if_t::prepare (mhaconfig_t & signal_dimensions) [override], [virtual]`

Prepare rmslevel plugin for signal processing: Resize and reinitialize monitor variables according to number of audio channels specified in parameter, publish applicable monitor variables as AC variables (depends on signal domain).

Parameters

<code>signal_dimensions</code>	Audio signal metadata, not modified by this method.
--------------------------------	---

Implements **MHAPlugin::plugin_t< UNIT >** (p. [1201](#)).

5.413.3.4 release() `void rmslevel::rmslevel_if_t::release () [override], [virtual]`

Release removes published AC variables from AC space.

Reimplemented from **MHAPlugin::plugin_t< UNIT >** (p. [1202](#)).

5.413.3.5 update() `void rmslevel::rmslevel_if_t::update () [private]`

Called on write access to the configuration variable `unit`.

5.413.3.6 insert_ac_variables_levels() `void rmslevel::rmslevel_if_t::insert_ac_variables_levels () [private]`

(Re-)insert AC variables for spectral processing into AC space.

Needs to be called during **prepare()** (p. 1451) and at the end of every invocation of **process()** (p. 1450) when signal domain is `MHA_SPECTRUM`.

5.413.3.7 insert_ac_variables_peaks_and_levels() `void rmslevel::rmslevel_if_t::insert_ac_variables_peaks_and_levels () [private]`

(Re-)insert AC variables for waveform processing into AC space.

Needs to be called during **prepare()** (p. 1451) and at the end of every invocation of **process()** (p. 1450) when signal domain is `MHA_WAVEFORM`.

5.413.3.8 insert_ac_variable_float_vector() `void rmslevel::rmslevel_if_t::insert_ac_variable_float_vector (`
`std::vector< float > & v,`
`const std::string & acname) [private]`

(Re-)insert a single AC variable.

Helper method used by `insert_ac_variables_levels` and `insert_ac_variables_peaks_and_levels`. The stride of the AC variable will be set to `v.size()`.

Parameters

<code>v</code>	Vector of floats to insert into the AC space. Its memory at <code>v.data()</code> must be valid until the next call to process() (p. 1450) or release() (p. 1451) (whichever occurs earlier). Values may be accessed or altered by other plugins.
<code>acname</code>	Name of the AC variable in the AC space.

5.413.3.9 remove_ac_variables() `void rmslevel::rmslevel_if_t::remove_ac_variables () [private]`

Remove AC variables from AC space.

Called from `release()` (p. 1451).

5.413.4 Member Data Documentation

5.413.4.1 patchbay `MHAEvents::patchbay_t< rmslevel_if_t> rmslevel::rmslevel_if←_t::patchbay` [private]

Configuration language event dispatcher.

5.413.4.2 level `MHAParser::vfloat_mon_t rmslevel::rmslevel_if_t::level` = {"RMS level in W/m²"} [private]

Sound power.

5.413.4.3 level_db `MHAParser::vfloat_mon_t rmslevel::rmslevel_if_t::level_db` = {"RMS level in dB"} [private]

Sound pressure level.

5.413.4.4 peak `MHAParser::vfloat_mon_t rmslevel::rmslevel_if_t::peak` = {"peak amplitude in Pa"} [private]

Peak amplitude.

5.413.4.5 peak_db `MHAParser::vfloat_mon_t rmslevel::rmslevel_if_t::peak_db` = {"peak amplitude in dB"} [private]

dB value corresponding to peak amplitude.

5.413.4.6 level_acname `const std::string rmslevel::rmslevel_if_t::level_acname`
[private]

AC variable name for `level`.

5.413.4.7 level_db_acname `const std::string rmslevel::rmslevel_if_t::level_db_↔`
`acname` [private]

AC variable name for `level_db`.

5.413.4.8 peak_acname `const std::string rmslevel::rmslevel_if_t::peak_acname`
[private]

AC variable name for `peak`.

5.413.4.9 peak_db_acname `const std::string rmslevel::rmslevel_if_t::peak_db_↔`
`acname` [private]

AC variable name for `peak_db`.

5.413.4.10 unit `MHAParser::kw_t rmslevel::rmslevel_if_t::unit` [private]

Configuration variable for selecting result dB scale.

5.413.4.11 freq_offsets `std::vector< mha_real_t> rmslevel::rmslevel_if_t::freq_↔`
`offsets` [private]

`freq_offsets` provides the conversion of dB(SPL) to dB(HL) for every frequency bin in the `stft` used by `coloured_intensity`.

Unused when not in spectral domain and `unit=hl`.

`::basename [private]`

The documentation for this class was generated from the following file:

- **shadowfilter_end.cpp**

5.426 sine_cfg_t Struct Reference

Runtime configuration of the sine plugin.

Public Member Functions

- **sine_cfg_t** (double `sampling_rate`, **mha_real_t** `frequency`, **mha_real_t** `newlev`, int `↔`
`mix`, const std::vector< int > &`_channels`)
Constructor computes data members from input parameters.

Public Attributes

- double **phase_increment_div_2pi**
Phase increment per sample, divided by 2 pi for easier phase wrapping.
- double **amplitude**
Amplitude of the sinusoid in Pascal.
- int **mix**
0 for mode replace, 1 for mode mix. Used as factor on input signal.
- const std::vector< int > **channels**
Indices of affected audio channels.

5.426.1 Detailed Description

Runtime configuration of the sine plugin.

5.426.2 Constructor & Destructor Documentation

5.426.2.1 sine_cfg_t() `sine_cfg_t::sine_cfg_t (`
`double sampling_rate,`
`mha_real_t frequency,`
`mha_real_t newlev,`
`int _mix,`
`const std::vector< int > & _channels) [inline]`

Constructor computes data members from input parameters.

5.426.3 Member Data Documentation

5.426.3.1 phase_increment_div_2pi `double sine_cfg_t::phase_increment_div_2pi`

Phase increment per sample, divided by 2 pi for easier phase wrapping.

5.426.3.2 amplitude `double sine_cfg_t::amplitude`

Amplitude of the sinusoid in Pascal.

5.426.3.3 mix `int sine_cfg_t::mix`

0 for mode replace, 1 for mode mix. Used as factor on input signal.

5.426.3.4 channels `const std::vector<int> sine_cfg_t::channels`

Indices of affected audio channels.

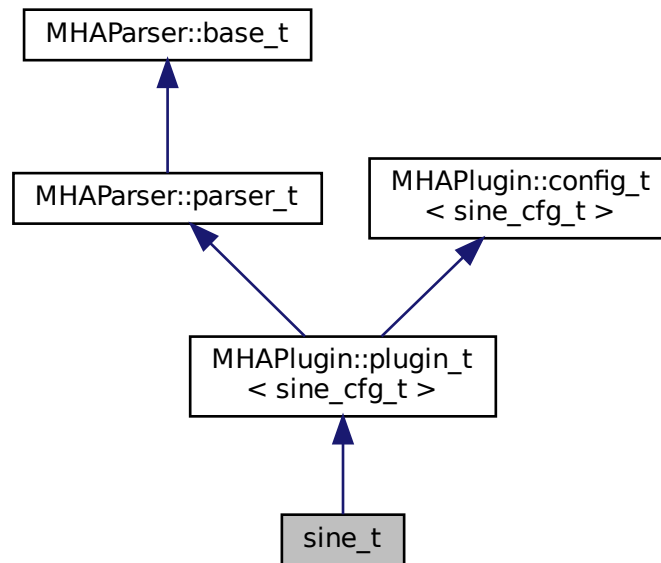

The documentation for this struct was generated from the following file:

- **sine.cpp**

5.427 sine_t Class Reference

Interface class of plugin `sine`, a sinusoid generator plugin.

Inheritance diagram for `sine_t`:

Public Member Functions

- **sine_t** (**MHA_AC::algo_comm_t** &iac, const std::string &configured_name)
Constructor initializes and connects configuration variables.
- **mha_wave_t** * **process** (**mha_wave_t** *)
Computes sinusoid and mixes/replaces input signal.
- void **prepare** (**mhaconfig_t** &)
Adapts range of channel variable and prepares.
- void **release** ()
Reset channel range to default.

Private Member Functions

- void **update_cfg** ()
Computes new runtime configuration.

Private Attributes

- `MHAParser::float_t lev`
- `MHAParser::float_t frequency`
- `MHAParser::kw_t mode`
- `MHAParser::vint_t channels`

5.427.1 Detailed Description

Interface class of plugin `sine`, a sinusoid generator plugin.

5.427.2 Constructor & Destructor Documentation

5.427.2.1 `sine_t()` `sine_t::sine_t (`
 `MHA_AC::algo_comm_t & iac,`
 `const std::string & configured_name)`

Constructor initializes and connects configuration variables.

5.427.3 Member Function Documentation

5.427.3.1 `process()` `mha_wave_t * sine_t::process (`
 `mha_wave_t * s)`

Computes sinusoid and mixes/replaces input signal.

If the amplitude has changed since the last process callback, spread out the amplitude change linearly across all samples of the buffer to avoid clicks.

5.427.3.2 prepare() `void sine_t::prepare (mhaconfig_t & tf) [virtual]`

Adapts range of channel variable and prepares.

Implements **MHAPLugin::plugin_t< sine_cfg_t >** (p. [1201](#)).

5.427.3.3 release() `void sine_t::release () [virtual]`

Reset channel range to default.

Reimplemented from **MHAPLugin::plugin_t< sine_cfg_t >** (p. [1202](#)).

5.427.3.4 update_cfg() `void sine_t::update_cfg () [private]`

Computes new runtime configuration.

5.427.4 Member Data Documentation

5.427.4.1 lev `MHAParser::float_t sine_t::lev [private]`

5.428.1 Constructor & Destructor Documentation

5.428 `smooth_cepstrum::smooth_cepstrum_if_t` Class Reference 497

5.428.1.1 `smooth_cepstrum_if_t()` `smooth_cepstrum::smooth_cepstrum_if_t::smooth_cepstrum_if_t (`
`MHA_AC::algo_comm_t & iac,`
`const std::string & configured_name)`

Constructs the beamforming plugin.

5.428.2 Member Function Documentation

5.428.2.1 `process()` `mha_spec_t * smooth_cepstrum::smooth_cepstrum_if_t::process (`
`mha_spec_t * signal)`

This plugin implements noise reduction using spectral subtraction: by nonnegative subtraction from the output magnitude of the estimated noise magnitude spectrum.

Parameters

<i>signal</i>	Pointer to the input signal structure.
---------------	--

Returns

Returns a pointer to the input signal structure, with a the signal modified by this plugin.

5.428.2.2 `prepare()` `void smooth_cepstrum::smooth_cepstrum_if_t::prepare (`
`mhaconfig_t & signal_info) [virtual]`

Plugin preparation.

This plugin checks that the input signal has the spectral domain and contains at least one channel

Parameters

<i>signal_info</i>	Structure containing a description of the form of the signal (domain, number of channels, frames per block, sampling rate).
--------------------	---

Implements `MHAPlugin::plugin_t < smooth_cepstrum_t >` (p. 1201).

5.428.2.3 release() `void smooth_cepstrum::smooth_cepstrum_if_t::release (void) [inline], [virtual]`

Reimplemented from **MHAPLugin::plugin_t< smooth_cepstrum_t >** (p. 1202).

5.428.2.4 update_cfg() `void smooth_cepstrum::smooth_cepstrum_if_t::update_cfg () [private]`

The documentation for this class was generated from the following file:

- **softclip.cpp**

5.434 softclipper_t Class Reference

Soft clipper signal processing implementation.

Public Member Functions

- **softclipper_t** (const **softclipper_variables_t** &v, const **mhaconfig_t** &tf)
Constructor, copies information from parameters and initializes state.
- **mha_real_t process** (**mha_wave_t** *s)
Process one block of audio signal.

Private Attributes

- **MHAFilter::o1flt_lowpass_t attack**
Attack filter.
- **MHAFilter::o1flt_maxtrack_t decay**
Decay filter.
- **MHAFilter::o1flt_lowpass_t clipmeter**
Clipping ratio filter.
- **mha_real_t threshold**
Compression onset value.
- **mha_real_t hardlimit**
Maximum output amplitude of softclipper.
- **mha_real_t slope**
Compression slope.
- **bool linear**
Is compression done on linear or log scale.

5.434.1 Detailed Description

Soft clipper signal processing implementation.

5.434.2 Constructor & Destructor Documentation

5.434.2.1 softclipper_t() `softclipper_t::softclipper_t (`
`const softclipper_variables_t & v,`
`const mhaconfig_t & tf)`

Constructor, copies information from parameters and initializes state.

Parameters

<i>v</i>	Configuration variables of the softclipper
<i>tf</i>	Signal dimensions

5.434.3 Member Function Documentation

5.434.3.1 process() `mha_real_t softclipper_t::process (`
`mha_wave_t * s)`

Process one block of audio signal.

Parameters

<code>in, out</code>	<code>s</code>	Input signal which is modified in-place
----------------------	----------------	---

5.434.4 Member Data Documentation

5.434.4.1 attack `MHAFilter::o1flt_lowpass_t softclipper_t::attack [private]`

Attack filter.

5.434.4.2 decay `MHAFilter::o1flt_maxtrack_t softclipper_t::decay [private]`

Decay filter.

5.434.4.3 clipmeter `MHAFilter::o1flt_lowpass_t softclipper_t::clipmeter [private]`

Clipping ratio filter.

5.434.4.4 threshold `mha_real_t softclipper_t::threshold [private]`

Compression onset value.

5.434.4.5 hardlimit `mha_real_t softclipper_t::hardlimit [private]`

Maximum output amplitude of softclipper.

5.434.4.6 slope `mha_real_t softclipper_t::slope [private]`

Compression slope.

5.434.4.7 linear `bool softclipper_t::linear [private]`

Is compression done on linear or log scale.

The documentation for this class was generated from the following file:

5.446 trigger2lsl::trigger2lsl_if_t Class Reference

Plugin interface class of plugin `trigger2lsl` (p. 163).

Inheritance diagram for trigger2Isl::trigger2Isl_if_t:

Public Member Functions

- `template<class mha_signal_t >`
`mha_signal_t * process (mha_signal_t *s)`
- `void prepare (mhaconfig_t &cf)`
Prepare callback.
- `void release ()`
Ensure recorded data is flushed to disk.
- `trigger2Isl_if_t (MHA_AC::algo_comm_t &iac, const std::string &configured_name)`
Plugin interface constructor.

Private Member Functions

- `void update ()`

Private Attributes

- `MHAEvents::patchbay_t< trigger2Isl_if_t > patchbay`
- `MHAParser::string_t rising_edge {"Marker string to be sent when a rising edge is detected","START"}`

- **MHAParser::string_t falling_edge** {"Marker string to be sent when a falling edge is detected","STOP"}
- **MHAParser::float_t threshold** {"Threshold","0.5","[0,]"}
- **MHAParser::int_t channel** {"Channel index where edge detection should be run","0","[0,]"}
- **MHAParser::string_t stream_name** {"Name of the output stream",""}
- **MHAParser::bool_t use_edge_position** {"Offset timestamp by position of edge within block","no"}
- **MHAParser::int_t min_debounce** {"Number of consecutive samples the **threshold** must have been crossed before a trigger is issued","3","[0,]"}

Additional Inherited Members

5.446.1 Detailed Description

Plugin interface class of plugin **trigger2lsl** (p. 163).

5.446.2 Constructor & Destructor Documentation

5.446.2.1 trigger2lsl_if_t() `trigger2lsl_if_t::trigger2lsl_if_t (MHA_AC::algo_comm_t & iac, const std::string & configured_name)`

Plugin interface constructor.

Parameters

<i>iac</i>	Algorithm communication variable space.
------------	---

5.446.3 Member Function Documentation

5.446.3.1 process() `template<class mha_signal_t > mha_signal_t * trigger2lsl_if_t::process (mha_signal_t * s)`

5.446.3.2 prepare() `void trigger2lsl_if_t::prepare (mhaconfig_t & cf) [virtual]`

Prepare callback.

trigger2lsl (p. 163) does not modify the signal parameters.

Parameters

<i>cf</i>	The signal parameters.
-----------	------------------------

Implements **MHAPLugin::plugin_t< trigger2lsl_rt_t >** (p. 1201).

5.446.3.3 release() `void trigger2lsl_if_t::release () [virtual]`

Ensure recorded data is flushed to disk.

Reimplemented from **MHAPLugin::plugin_t< trigger2lsl_rt_t >** (p. 1202).

5.446.3.4 update() `void trigger2lsl_if_t::update () [private]`

5.446.4 Member Data Documentation

5.446.4.1 patchbay **MHAEvents::patchbay_t< trigger2lsl_if_t >** **trigger2lsl::trigger2lsl_if_t::patchbay** [private]

5.446.4.2 rising_edge **MHAParser::string_t** **trigger2lsl::trigger2lsl_if_t::rising_↔edge** {"Marker string to be sent when a rising edge is detected","START"} [private]

5.446.4.3 falling_edge `MHAParser::string_t trigger2lsl::trigger2lsl_if_t::falling_↔
_edge` {"Marker string to be sent when a falling edge is detected", "STOP"} [private]

5.446.4.4 threshold `MHAParser::float_t trigger2lsl::trigger2lsl_if_t::threshold`
{ "Threshold", "0.5", "[0,]" } [private]

5.446.4.5 channel `MHAParser::int_t trigger2lsl::trigger2lsl_if_t::channel` {"Channel
index where edge detection should be run", "0", "[0,]" } [private]

5.446.4.6 stream_name `MHAParser::string_t trigger2lsl::trigger2lsl_if_t::stream_↔
_name` {"Name of the output stream", ""} [private]

5.446.4.7 use_edge_position `MHAParser::bool_t trigger2lsl::trigger2lsl_if_↔
t::use_edge_position` {"Offset timestamp by position of edge within block", "no"}
[private]

5.446.4.8 min_debounce `MHAParser::int_t trigger2lsl::trigger2lsl_if_t::min_↔
_debounce` {"Number of consecutive samples the **threshold** must have been crossed
before a trigger is issued", "3", "[0,]" } [private]

The documentation for this class was generated from the following files:

- `trigger2lsl.hh`
- `trigger2lsl.cpp`

5.447 trigger2lsl::trigger2lsl_rt_t Class Reference

real-time configuration class for `trigger2lsl` (p. 163) plugin

Public Member Functions

- **trigger2lsl_rt_t** (const std::string &stream_name_, const std::string &rising_edge_↔, const std::string &falling_edge_, **mha_real_t** threshold_, int channel_, **mha_real_t** sampling_rate_, bool use_edge_position_, int min_debounce_)
C'tor of rt configuration.
- void **process** (**mha_wave_t** *wave)

Private Attributes

- lsl::stream_outlet **stream**
Outlet stream.
- const std::string **rising_edge**
String to be sent when a rising edge is detected.
- const std::string **falling_edge**
String to be sent when a falling edge is detected.
- const **mha_real_t** **threshold**
Threshold for state transition.
- const int **channel**
Channel number where to look for threshold crossings.
- bool **state** =false
Current state.
- const **mha_real_t** **sampling_rate**
Sampling rate of the input signal.
- const bool **use_edge_position** =true
Flag wether to use the position of the edge within the signal block to correct the timestamp of the output marker.
- const int **min_debounce**
Minimum number of consecutive samples that need to cross the threshold to initiate a state transition.
- int **debounce_counter** =0
Debounce counter.

5.447.1 Detailed Description

real-time configuration class for **trigger2lsl** (p. [163](#)) plugin

5.447.2 Constructor & Destructor Documentation

```

5.447.2.1 trigger2lsl_rt_t() trigger2lsl_rt_t::trigger2lsl_rt_t (
    const std::string & stream_name_,
    const std::string & rising_edge_,
    const std::string & falling_edge_,
    mha_real_t threshold_,
    int channel_,
    mha_real_t sampling_rate_,
    bool use_edge_position_,
    int min_debounce_ )

```

C'tor of rt configuration.

Parameters

<i>stream_name_</i>	Name of the output stream
<i>rising_edge_</i>	String to be sent on detection of a rising edge
<i>falling_edge_</i>	String to be sent on detection of a falling edge
<i>threshold_</i>	Threshold for state transition
<i>channel_</i>	Channel index where to look for threshold crossings
<i>sampling_rate_</i>	Sampling rate of the input signal. Needed for timestamp offset correction
<i>use_edge_↔ position_</i>	Flag whether to use the position of the edge within the signal block to correct the timestamp of the output marker
<i>min_debounce_</i>	Minimum number of consecutive samples that need to cross the threshold to initiate a state transition

5.447.3 Member Function Documentation

```

5.447.3.1 process() void trigger2lsl_rt_t::process (
    mha_wave_t * wave )

```

5.447.4 Member Data Documentation

```

5.447.4.1 stream lsl::stream_outlet trigger2lsl::trigger2lsl_rt_t::stream [private]

```

Outlet stream.

5.447.4.2 rising_edge `const std::string trigger2lsl::trigger2lsl_rt_t::rising_edge [private]`

String to be sent when a rising edge is detected.

5.447.4.3 falling_edge `const std::string trigger2lsl::trigger2lsl_rt_t::falling_↔edge [private]`

String to be sent when a falling edge is detected.

5.447.4.4 threshold `const mha_real_t trigger2lsl::trigger2lsl_rt_t::threshold [private]`

Threshold for state transition.

5.447.4.5 channel `const int trigger2lsl::trigger2lsl_rt_t::channel [private]`

Channel number where to look for threshold crossings.

5.447.4.6 state `bool trigger2lsl::trigger2lsl_rt_t::state =false [private]`

Current state.

false means HIGH and true means LOW. LOW state means we are below the threshold, looking for rising edges, HIGH state means we are above, looking for falling edges.

5.447.4.7 sampling_rate `const mha_real_t trigger2lsl::trigger2lsl_rt_t::sampling_↔_rate [private]`

Sampling rate of the input signal.

Needed for timestamp offset correction

5.447.4.8 use_edge_position `const bool trigger2lsl::trigger2lsl_rt_t::use_edge_↔
position =true [private]`

Flag wether to use the position of the edge within the signal block to correct the timestamp of the output marker.

5.447.4.9 min_debounce `const int trigger2lsl::trigger2lsl_rt_t::min_debounce
[private]`

Minimum number of consecutive samples that need to cross the threshold to initiate a state transition.

5.447.4.10 debounce_counter `int trigger2lsl::trigger2lsl_rt_t::debounce_counter
=0 [private]`

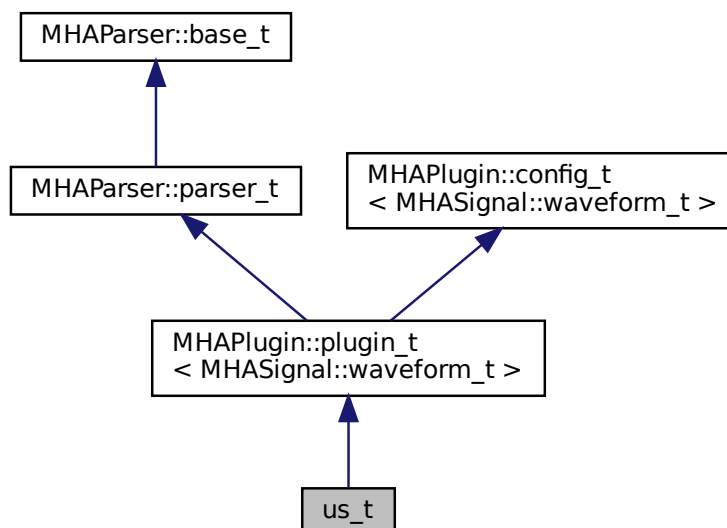

Debounce counter.

The documentation for this class was generated from the following files:

- **trigger2lsl.hh**
- **trigger2lsl.cpp**

5.448 us_t Class Reference

Inheritance diagram for us_t:

Public Member Functions

- `us_t (MHA_AC::algo_comm_t &iac, const std::string &configured_name)`
- `mha_wave_t * process (mha_wave_t *)`
- `void prepare (mhaconfig_t &)`
- `void release ()`

Private Attributes

- `MHAParser::int_t ratio`
- `MHAFilter::iir_filter_t antialias`

Additional Inherited Members

5.448.1 Constructor & Destructor Documentation

5.448.1.1 us_t() `us_t::us_t (MHA_AC::algo_comm_t & iac, const std::string & configured_name)`

5.448.2 Member Function Documentation

5.448.2.1 process() `mha_wave_t * us_t::process (mha_wave_t * s)`

5.448.2.2 prepare() `void us_t::prepare (mhaconfig_t & cf) [virtual]`

Implements `MHAPlugin::plugin_t< MHASignal::waveform_t >` (p. 1201).

5.448.2.3 release() `void us_t::release () [virtual]`

Reimplemented from `MHAPLugin::plugin_t< MHASignal::waveform_t >` (p. [1202](#)).

5.448.3 Member Data Documentation

5.448.3.1 ratio `MHAParser::int_t us_t::ratio [private]`

5.448.3.2 antialias `MHAFilter::iir_filter_t us_t::antialias [private]`

The documentation for this class was generated from the following file:

- `upsample.cpp`

5.449 wave2lsl::cfg_t Class Reference

Runtime configuration class of the `wave2lsl` (p. [164](#)) plugin.

Public Member Functions

- `cfg_t` (unsigned skip_, unsigned num_channels_, unsigned num_samples_, const std::string &source_id, const std::string varname_, double rate)
C'tor of `wave2lsl` (p. [164](#)) run time configuration.
- void `process` (`mha_wave_t` *s)

Private Attributes

- unsigned `skipcnt`
Counter of frames to skip.
- const unsigned `skip`
Number of frames to skip after each send.
- `lsl::stream_info` `info`
LSL stream info.
- `lsl::stream_outlet` `stream`
LSL stream outlet.

5.449.1 Detailed Description

Runtime configuration class of the **wave2lsl** (p. 164) plugin.

5.449.2 Constructor & Destructor Documentation

5.449.2.1 **cfg_t()** `cfg_t::cfg_t (`
 unsigned *skip_*,
 unsigned *num_channels_*,
 unsigned *num_samples_*,
 const std::string & *source_id*,
 const std::string *varname_*,
 double *rate*)

C'tor of **wave2lsl** (p. 164) run time configuration.

Parameters

<i>skip_</i>	Number of frames to skip after each send
<i>num_↔ channels_</i>	Number of channels in the LSL stream
<i>num_↔ samples_</i>	Number of samples within one frame
<i>source_id_</i>	LSL identifier for this data stream
<i>varname_</i>	Names of AC variables to send over LSL
<i>rate</i>	Rate with wich chunks of data are sent to the LSL stream. Usually the rate with which process calls happen, but may be lower due to the subsampling caused by <i>skip_</i>

5.449.3 Member Function Documentation

5.449.3.1 **process()** `void cfg_t::process (`
 mha_wave_t * *s*)

5.449.4 Member Data Documentation

5.449.4.1 skipcnt `unsigned wave2lsl::cfg_t::skipcnt [private]`

Counter of frames to skip.

5.449.4.2 skip `const unsigned wave2lsl::cfg_t::skip [private]`

Number of frames to skip after each send.

5.449.4.3 info `lsl::stream_info wave2lsl::cfg_t::info [private]`

LSL stream info.

5.449.4.4 stream `lsl::stream_outlet wave2lsl::cfg_t::stream [private]`

LSL stream outlet.

Interface to lsl

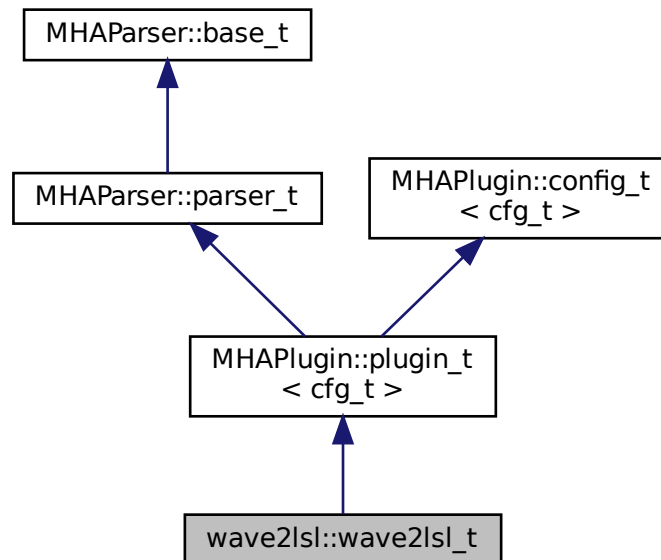

The documentation for this class was generated from the following file:

- **wave2lsl.cpp**

5.450 wave2lsl::wave2lsl_t Class Reference

Plugin class of **wave2lsl** (p. 164).

Inheritance diagram for wave2lsl::wave2lsl_t:

Public Member Functions

- **wave2lsl_t** (**MHA_AC::algo_comm_t** &iac, const std::string &configured_name)
- void **prepare** (**mhaconfig_t** &)
*Prepare locks the configuration, then calls **update()** (p. 1563).*
- **mha_wave_t** * **process** (**mha_wave_t** *s)
Processing fct for waveforms.
- void **release** ()
Release fct.

Private Member Functions

- void **update** ()
Construct new runtime configuration.

Private Attributes

- `MHAParser::string_t name`
- `MHAParser::string_t source_id`
- `MHAParser::bool_t rt_strict`
- `MHAParser::bool_t activate`
- `MHAParser::int_t skip`
- `MHAEvents::patchbay_t< wave2lsl_t > patchbay`
- `bool is_first_run`

Additional Inherited Members

5.450.1 Detailed Description

Plugin class of `wave2lsl` (p. [164](#)).

5.450.2 Constructor & Destructor Documentation

5.450.2.1 `wave2lsl_t()` `wave2lsl::wave2lsl_t::wave2lsl_t (`
 `MHA_AC::algo_comm_t & iac,`
 `const std::string & configured_name)`

5.450.3 Member Function Documentation

5.450.3.1 `prepare()` `void wave2lsl::wave2lsl_t::prepare (`
 `mhaconfig_t &) [virtual]`

Prepare locks the configuration, then calls `update()` (p. [1563](#)).

Implements `MHAPlugin::plugin_t< cfg_t >` (p. [1201](#)).

5.450.3.2 process() `mha_wave_t * wave2lsl::wave2lsl_t::process (mha_wave_t * s)`

Processing fct for waveforms.

Calls process of the cfg class.

5.450.3.3 release() `void wave2lsl::wave2lsl_t::release () [virtual]`

Release fct.

Unlocks the configuration

Reimplemented from **MHAPLugin::plugin_t< cfg_t >** (p. 1202).

5.450.3.4 update() `void wave2lsl::wave2lsl_t::update () [private]`

Construct new runtime configuration.

5.450.4 Member Data Documentation

5.450.4.1 name `MHAParser::string_t wave2lsl::wave2lsl_t::name [private]`

5.450.4.2 source_id `MHAParser::string_t wave2lsl::wave2lsl_t::source_id [private]`

5.450.4.3 rt_strict `MHAParser::bool_t wave2lsl::wave2lsl_t::rt_strict [private]`

5.450.4.4 activate `MHAParser::bool_t wave2lsl::wave2lsl_t::activate [private]`

5.450.4.5 skip `MHAParser::int_t wave2lsl::wave2lsl_t::skip [private]`

5.450.4.6 patchbay `MHAEvents::patchbay_t< wave2lsl_t> wave2lsl::wave2lsl_t↔
::patchbay [private]`

5.450.4.7 is_first_run `bool wave2lsl::wave2lsl_t::is_first_run [private]`

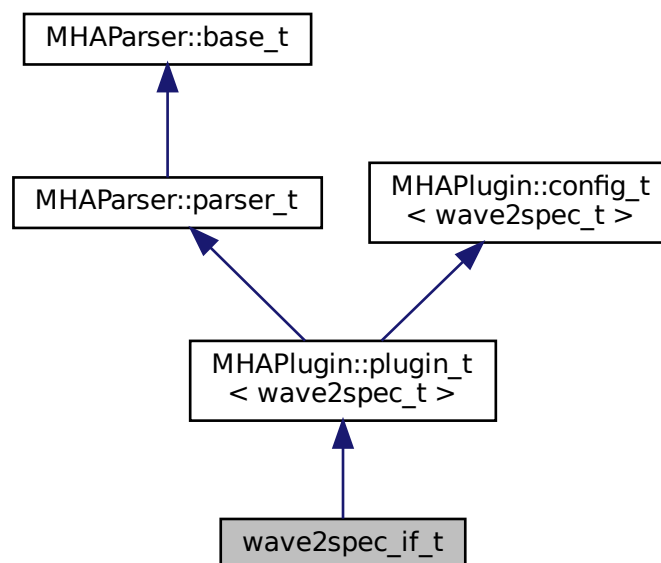

The documentation for this class was generated from the following file:

- `wave2lsl.cpp`

5.451 wave2spec_if_t Class Reference

Plugin wave2spec interface class, uses `wave2spec_t` (p. 1569) as runtime configuration.

Inheritance diagram for `wave2spec_if_t`:

Public Member Functions

- **wave2spec_if_t** (**MHA_AC::algo_comm_t** &iac, const std::string &configured_name)
Constructor of wave2spec plugin, sets up configuration variables and callbacks.
- void **prepare** (**mhaconfig_t** &t)
prepare for signal processing
- void **release** ()
Unprepare signal processing.
- void **process** (**mha_wave_t** *wave_in, **mha_spec_t** **sout)
processing callback used for domain transformation
- void **process** (**mha_wave_t** *wave_in, **mha_wave_t** **sout)
processing callback used if output of original waveform is requested.

Private Member Functions

- void **update** ()
Create a new runtime configuration from configuration parameters when the plugin is prepared, or when the window position or other window parameters change.
- void **setlock** (bool b)
Lock/Unlock all configuration variables.

Private Attributes

- **MHAParser::int_t nfft**
FFT length selector.
- **MHAParser::int_t nwnd**
Window length selector.
- **MHAParser::float_t wndpos**
Window position selector.
- **windowselector_t window_config**
- **MHAParser::bool_t strict_window_ratio**
Switch to disallow window sizes that are not a multiple of the fragsize a by power of two.
- **MHAParser::bool_t return_wave**
Switch to select return domain.
- std::string **algo**
configured name this plugin, used to name the AC variables
- **MHAParser::vfloat_mon_t zeropadding**

Additional Inherited Members

5.451.1 Detailed Description

Plugin wave2spec interface class, uses **wave2spec_t** (p. 1569) as runtime configuration.

5.451.2 Constructor & Destructor Documentation

5.451.2.1 wave2spec_if_t() `wave2spec_if_t::wave2spec_if_t (`
 `MHA_AC::algo_comm_t & iac,`
 `const std::string & configured_name)`

Constructor of wave2spec plugin, sets up configuration variables and callbacks.

Parameters

<i>iac</i>	algorithm communication storage accessor
<i>ialg</i>	configured name of this plugin, used to name the AC variables published by wave2spec

5.451.3 Member Function Documentation

5.451.3.1 prepare() `void wave2spec_if_t::prepare (`
 `mhaconfig_t & t) [virtual]`

prepare for signal processing

Parameters

<i>in, out</i>	<i>t</i>	signal dimensions, modified by prepare as determined by the STFT configuration
----------------	----------	--

Implements **MHAPlugin::plugin_t< wave2spec_t >** (p. [1201](#)).

5.451.3.2 release() `void wave2spec_if_t::release () [virtual]`

Unprepare signal processing.

Reimplemented from **MHAPlugin::plugin_t< wave2spec_t >** (p. [1202](#)).

5.451.3.3 process() [1/2] `void wave2spec_if_t::process (`
`mha_wave_t * wave_in,`
`mha_spec_t ** sout)`

processing callback used for domain transformation

Parameters

<code>wave_in</code>	latest block of audio signal (hop size samples per channel)
<code>sout</code>	output spectrum pointer

5.451.3.4 process() [2/2] `void wave2spec_if_t::process (`
`mha_wave_t * wave_in,`
`mha_wave_t ** sout)`

processing callback used if output of original waveform is requested.

The STFT spectrum is computed and can only be accessed by downstream plugins through the AC variable published by this plugin.

Parameters

<code>wave_in</code>	latest block of audio signal (hop size samples per channel)
<code>sout</code>	output waveform pointer (FFT length samples per channel)

5.451.3.5 update() `void wave2spec_if_t::update () [private]`

Create a new runtime configuration from configuration parameters when the plugin is prepared, or when the window position or other window parameters change.

Exceptions

<i>MHA_Error</i> (p. 818)	if the configuration change is not compatible with the current input and FFT length constraints.
----------------------------------	--

5.451.3.6 setlock() `void wave2spec_if_t::setlock (`
`bool b) [private]`

Lock/Unlock all configuration variables.

Parameters

<i>b</i>	Desired lock state
----------	--------------------

5.451.4 Member Data Documentation

5.451.4.1 nfft `MHAParser::int_t wave2spec_if_t::nfft [private]`

FFT length selector.

5.451.4.2 nwnd `MHAParser::int_t wave2spec_if_t::nwnd [private]`

Window length selector.

5.452.1 Detailed Description

Runtime configuration class for plugin wave2spec.

Manages window shift, windowing, zero-padding, and FFT. Inserts current window shape and current STFT spectrum into AC space.

5.452.2 Constructor & Destructor Documentation

```
5.452.2.1 wave2spec_t() wave2spec_t::wave2spec_t (
    unsigned int nfft,
    unsigned int nwnd_,
    unsigned int nwndshift_,
    unsigned int nch,
    mha_real_t wndpos,
    const MHAWindow::base_t & window,
    MHA_AC::algo_comm_t & ac,
    std::string algo )
```

Constructor computes window and zeropadding, allocates storage and FFT plan.

Parameters

<i>nfft</i>	FFT length
<i>nwnd_</i>	window length in samples
<i>nwndshift_</i>	window shift (hop size) in samples
<i>nch</i>	number of audio channels
<i>wndpos</i>	for cases $nfft > nwnd_$, where to place the window inside the FFT buffer: 0 = at start, 1 = at end, 0.5 = centered. Position is rounded to full samples and determines zero-padding
<i>window</i>	Analysis window shape
<i>ac</i>	algorithm communication storage accessor
<i>algo</i>	configured name of this plugin, used to name the AC variables published by wave2spec

5.452.2.2 `~wave2spec_t()` `wave2spec_t::~~wave2spec_t ()`

Destructor removes AC variables from AC space and deallocates memory.

5.452.3 Member Function Documentation

5.452.3.1 `publish_ac_variables()` `void wave2spec_t::publish_ac_variables ()`

Insert two AC variables into AC space:

- `<configured_name>`: Contains the current STFT spectrum.
- `<configured_name>_wnd`: Contains the window shape as individual weights.

5.452.3.2 `process()` `mha_spec_t * wave2spec_t::process (mha_wave_t * wave_in)`

Perform signal shift, windowing, zero-padding and FFT.

Parameters

<code>wave↔ _in</code>	latest block of audio signal (hop size samples per channel)
----------------------------	---

Returns

pointer to current STFT spectrum. Storage is managed by this object. Downstream plugins may modify the signal in place.

5.452.3.3 `get_zeropadding()` `unsigned wave2spec_t::get_zeropadding (bool after) const [inline]`

Getter method to read zeropadding computed for the STFT configuration parameters.

Result is only valid after `prepare()` has been called.

Returns

Computed zeropadding before or after the analysis window in number of samples.

Parameters

<i>after</i>	When false, return length of zeropadding before the analysis window. When true, return length of zeropadding in samples after the analysis window.
--------------	--

5.452.3.4 calc_pre_wnd() `void wave2spec_t::calc_pre_wnd (`
`MHASignal::waveform_t & dest,`
`const MHASignal::waveform_t & src) [private]`

Applies analysis window weights to current input signal and writes windowed signal to correct place in FFT buffer.

Ensures zero-padding regions contain only zeros. To be invoked before applying FFT.

Parameters

<i>out</i>	<i>dest</i>	waveform buffer with FFT length audio samples, completely overwritten by this method
<i>in</i>	<i>src</i>	waveform buffer with window length audio samples, these samples are written to dest after window shape has been applied to the individual samples.

5.452.4 Member Data Documentation

5.452.4.1 nwnd `unsigned int wave2spec_t::nwnd [private]`

window length

5.452.4.2 nwndshift `unsigned int wave2spec_t::nwndshift [private]`

window shift or hop size

5.452.4.3 ft `mha_fft_t wave2spec_t::ft [private]`

FFT instance used for transformation.

5.452.4.4 npad1 `unsigned int wave2spec_t::npad1 [private]`

length of zero padding before window

5.452.4.5 npad2 `unsigned int wave2spec_t::npad2 [private]`

length of zero padding after window

5.452.4.6 window `MHAWindow::base_t wave2spec_t::window [private]`

Analysis window.

5.452.4.7 calc_in `MHASignal::waveform_t wave2spec_t::calc_in [private]`

waveform buffer with FFT length samples per channel

5.452.4.8 in_buf `MHASignal::waveform_t wave2spec_t::in_buf [private]`

waveform buffer with window length samples per channel

5.452.4.9 spec_in `MHASignal::spectrum_t wave2spec_t::spec_in [private]`

spectrum buffer containing only the positive frequency bins

5.452.4.10 ac_wndshape_name `std::string wave2spec_t::ac_wndshape_name` [private]

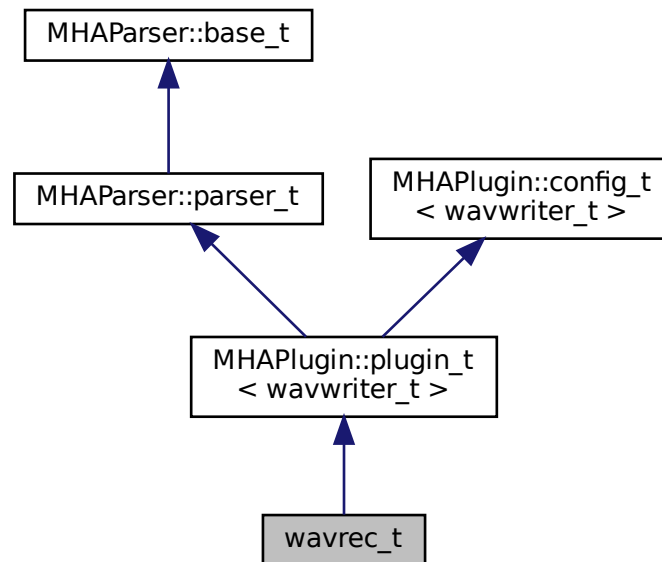

name of window shape AC variable

_Lowpass, float LowPassCutOffFrequency, float LowPassFraction_dB, float LowPass↔
WindGain_dB)
constructor translates configuration variables to runtime config
- **mha_spec_t * process** (**mha_spec_t** *signal, std::vector< int > &detected, std↔
::vector< float > &lowpass_quotient)
Detect windnoise.
- void **update_PSD_Lowpass** (const **mha_spec_t** *signal)
Low-pass filters the power spectrum.
- void **threshold_compare** (std::vector< int > &detected, std::vector< float > &lowpass↔
_quotient)
Wind noise detection by comparing low-frequency intensity with broadband intensity.
- int **remapping** (const std::vector< float > &lowpass_quotient)
- void **compensation** (**mha_spec_t** *signal, int best_signal_channel_index)

Public Attributes

- bool **UseChannel_LF_attenuation** = false
FIXME: documentation for UseChannel_LF_attenuation.
- float **alpha_Lowpass** = 0
Filter coefficient for low-pass filtering each bin in the power spectrum with a first-order recursive low-pass filter.
- unsigned **FrequencyBinLowPass** = 0
Only smoothed power spectrum bins < FrequencyBinLowPass are added to the low-pass intensity.
- float **LowPassFraction** = 1
The wind noise detection threshold: We have wind noise if $\text{lowFreqIntensity} / \text{broadBandIntensity} > \text{LowPassFraction}$.
- float **LowPassWindGain** = 1
FIXME: documentation for LowPassWindGain.
- **MHASignal::waveform_t PSD_Lowpass**
The smoothed-over-time power spectrum.
- **MHASignal::waveform_t powspec**
Temporary storage for the power spectrum of the current input spectrum.

5.455.1 Detailed Description

Runtime config class for windnoise plugin.

Computes power spectra of incoming STFT spectra, smoothes the power spectrum over time by low-pass filtering the intensities of each bin over time, then detects wind noise presence by comparing intensity at low frequency bins to broadband intensity.

5.455.2 Constructor & Destructor Documentation

5.455.2.1 **cfg_t()** `cfg_t::cfg_t (`
`const mhaconfig_t & signal_info,`
`bool UseChannel_LF_attenuation,`
`float tau_Lowpass,`
`float LowPassCutOffFrequency,`
`float LowPassFraction_dB,`
`float LowPassWindGain_dB)`

constructor translates configuration variables to runtime config

5.455.3 Member Function Documentation

5.455.3.1 process() `mha_spec_t * cfg_t::process (`
`mha_spec_t * signal,`
`std::vector< int > & detected,`
`std::vector< float > & lowpass_quotient)`

Detect windnoise.

FIXME: cancel it. The process method calls update_PSD_Lowpass and threshold_compare to do its work.

Parameters

<code>in, out</code>	<i>signal</i>	The current STFT spectrum.
<code>out</code>	<i>detected</i>	This Method changes the elements of the vector but not its size. Each element is set to 1 or 0, depending on windnoise being detected in the corresponding audio channel.
<code>out</code>	<i>lowpass_quotient</i>	This Method changes elements of the vector but not its size. Each element is set to the ratio between intensity of the signal, at low frequencies and overall intensity, in the corresponding audio channel.

Exceptions

<i>MHA_Error</i> (p. 818)	if <code>windnoise_indicators.size() != signal.num_channels</code> .
----------------------------------	--

5.455.3.2 update_PSD_Lowpass() `void cfg_t::update_PSD_Lowpass (`
`const mha_spec_t * signal)`

Low-pass filters the power spectrum.

5.455.3.3 threshold_compare() `void cfg_t::threshold_compare (`
`std::vector< int > & detected,`
`std::vector< float > & lowpass_quotient)`

Wind noise detection by comparing low-frequency intensity with broadband intensity.

Parameters

out	<i>detected</i>	This Method changes the elements of the vector but not its size. Each element is set to 1 or 0, depending on windnoise being detected in the corresponding audio channel.
out	<i>lowpass_quotient</i>	This Method changes elements of the vector but not its size. Each element is set to the ratio between intensity of the signal, at low frequencies and overall intensity, in the corresponding audio channel.

5.455.3.4 remapping() `int cfg_t::remapping (`
`const std::vector< float > & lowpass_quotient)`

5.455.3.5 compensation() `void cfg_t::compensation (`
`mha_spec_t * signal,`
`int best_signal_channel_index)`

5.455.4 Member Data Documentation

5.455.4.1 UseChannel_LF_attenuation `bool windnoise::cfg_t::UseChannel_LF_attenuation`
`= false`

FIXME: documentation for UseChannel_LF_attenuation.

5.455.4.2 alpha_Lowpass `float windnoise::cfg_t::alpha_Lowpass = 0`

Filter coefficient for low-pass filtering each bin in the power spectrum with a first-order recursive low-pass filter.

5.455.4.3 FrequencyBinLowPass `unsigned windnoise::cfg_t::FrequencyBinLowPass = 0`

Only smoothed power spectrum bins $<$ FrequencyBinLowPass are added to the low-pass intensity.

5.455.4.4 LowPassFraction `float windnoise::cfg_t::LowPassFraction = 1`

The wind noise detection threshold: We have wind noise if $\text{lowFreqIntensity} / \text{broadBandIntensity} > \text{LowPassFraction}$.

5.455.4.5 LowPassWindGain `float windnoise::cfg_t::LowPassWindGain = 1`

FIXME: documentation for LowPassWindGain.

5.455.4.6 PSD_Lowpass `MHASignal::waveform_t windnoise::cfg_t::PSD_Lowpass`

The smoothed-over-time power spectrum.

5.455.4.7 powspec `MHASignal::waveform_t windnoise::cfg_t::powspec`

Temporary storage for the power spectrum of the current input spectrum.

Only needed to hold the newest squared magnitudes until they are filtered into PSD_Lowpass.

5.456.1 Detailed Description

interface class for windnoise plugin

5.456.2 Constructor & Destructor Documentation

5.456.2.1 if_t() `windnoise::if_t::if_t (MHA_AC::algo_comm_t & iac, const std::string & configured_name)`

Constructor instantiates one windnoise plugin.

5.456.3 Member Function Documentation

5.456.3.1 prepare() `void windnoise::if_t::prepare (mhaconfig_t & signal_info) [override], [virtual]`

Prepare windnoise plugin for signal processing.

Parameters

<i>signal_info</i>	signal dimensions, not changed by this plugin
--------------------	---

Implements **MHAPlugin::plugin_t< cfg_t >** (p. 1201).

5.456.3.2 release() `void windnoise::if_t::release (void) [inline], [override], [virtual]`

Nothing needs to be deallocated on release.

Reimplemented from **MHAPlugin::plugin_t< cfg_t >** (p. 1202).

5.456.3.3 process() `mha_spec_t * windnoise::if_t::process (mha_spec_t * signal)`

signal processing, delegates to **cfg_t::process** (p. 1583)

5.456.3.4 update() `void windnoise::if_t::update (void)`

update runtime config when configuration parameters have changed

5.456.3.5 insert() `void windnoise::if_t::insert () [inline]`

inserts the windnoise detection vector into AC space

5.456.4 Member Data Documentation

5.456.4.1 patchbay `MHAEvents::patchbay_t< if_t>` `windnoise::if_t::patchbay` [private]

The Event connector.

5.457 **windowselector_t** Class Reference

A combination of mha parser variables to describe an overlapadd analysis window.

Public Member Functions

- **windowselector_t** (const std::string &default_type)
constructor creates the mha parser variables that describe an overlapadd analysis window.
- **~windowselector_t** ()
destructor frees window data that were allocated
- const **MHAWindow::base_t** & **get_window_data** (unsigned length)
re-computes the window if required.
- void **insert_items** (**MHAParser::parser_t** *p)
insert the window parameters "wndtype", "wndexp", and "userwnd" as mha configuration parameters into the given mha configuration parser.
- void **setlock** (bool b_)
Lock/Unlock variables.

Public Attributes

- **MHAEvents::emitter_t** **updated**
A collector event that fires when any of the window parameters managed here is written to.

Private Member Functions

- void **invalidate_window_data** ()
invalidates any allocated window samples.
- void **update_parser** ()
invoked when a parser parameter changes.

Private Attributes

- **MHAWindow::base_t * wnd**
Storage for the window data returned by `get_window_data()` (p. 1592)
- **MHAParser::kw_t wndtype**
parser variable for window type
- **MHAParser::float_t wndexp**
parser variable for window exponent
- **MHAParser::vfloat_t userwnd**
parser variable for user window samples to use
- **MHAEvents::patchbay_t < windowselector_t > patchbay**
patchbay to watch for changes for the parser variables

5.457.1 Detailed Description

A combination of mha parser variables to describe an overlapadd analysis window.

Provides a method to get the window samples as an instance of **MHAWindow::base_t** (p. 1338) when needed.

5.457.2 Constructor & Destructor Documentation

5.457.2.1 windowselector_t() `windowselector_t::windowselector_t (const std::string & default_type)`

constructor creates the mha parser variables that describe an overlapadd analysis window.

Parameters

<i>default_type</i>	name of the default analysis window type. Must be one of: "rect", "bartlett", "hanning", "hamming", "blackman"
---------------------	--

5.457.2.2 `~windowselector_t()` `windowselector_t::~~windowselector_t ()`

destructor frees window data that were allocated

5.457.3 Member Function Documentation

5.457.3.1 `get_window_data()` `const MHAWindow::base_t & windowselector_t::get_↔ window_data (` `unsigned length)`

re-computes the window if required.

Parameters

<i>length</i>	the desired window length in samples return the window's samples as a constref to MHAWindow::base_t (p. 1338) instance. The referenced instance lives until the window parameters are changed, or this windowselector_t (p. 1590) instance is destroyed.
---------------	--

5.457.3.2 `insert_items()` `void windowselector_t::insert_items (` `MHAParser::parser_t * p)`

insert the window parameters "wndtype", "wndexp", and "userwnd" as mha configuration parameters into the given mha configuration parser.

Parameters

<i>p</i>	The configuration parser where to insert the window parameters. E.g. the plugin wave2spec's interface class.
----------	--

5.457.3.3 `setlock()` `void windowselector_t::setlock (` `bool b_)`

Lock/Unlock variables.

Parameters

<code>b↔</code>	Desired lock state
<code>_↔</code>	

5.457.3.4 invalidate_window_data() `void windowselector_t::invalidate_window_data () [private]`

invalidates any allocated window samples.

5.457.3.5 update_parser() `void windowselector_t::update_parser () [private]`

invoked when a parser parameter changes.

Calls **invalidate_window_data()** (p. [1593](#)) and emits the updated event.

5.457.4 Member Data Documentation

5.457.4.1 updated `MHAEvents::emitter_t windowselector_t::updated`

A collector event that fires when any of the window parameters managed here is written to.

5.457.4.2 wnd `MHAWindow::base_t* windowselector_t::wnd [private]`

Storage for the window data returned by **get_window_data()** (p. [1592](#))

5.457.4.3 **wndtype** `MHAParser::kw_t` `windowselector_t::wndtype` [private]

parser variable for window type

5.457.4.4 **wndexp** `MHAParser::float_t` `windowselector_t::wndexp` [private]

parser variable for window exponent

5.457.4.5 **userwnd** `MHAParser::vfloat_t` `windowselector_t::userwnd` [private]

parser variable for user window samples to use

5.457.4.6 **patchbay** `MHAEvents::patchbay_t< windowselector_t>` `windowselector_t↔::patchbay` [private]

patchbay to watch for changes for the parser variables

The documentation for this class was generated from the following files:

- **windowselector.h**
- **windowselector.cpp**

6 File Documentation

6.1 ac2Isl.cpp File Reference

Classes

- struct **ac2Isl::type_info**
- class **ac2Isl::save_var_base_t**
Interface for ac to Isl bridge variable.
- class **ac2Isl::save_var_t< T >**
Implementation for all ac to Isl bridges except complex types.
- class **ac2Isl::save_var_t< mha_complex_t >**
*Template specialization of the **ac2Isl** (p. 78) bridge to take care of complex numbers.*
- class **ac2Isl::cfg_t**
*Runtime configuration class of the **ac2Isl** (p. 78) plugin.*
- class **ac2Isl::ac2Isl_t**
*Plugin class of **ac2Isl** (p. 78).*

Namespaces

- **ac2Isl**

*All types for the **ac2Isl** (p. 78) plugins live in this namespace.*

Variables

- const std::map< int, type_info > **ac2Isl::types**

6.2 ac2osc.cpp File Reference

Classes

- class **ac2osc_t**

Plugin class of the ac2osc plugin.

6.5.1 Macro Definition Documentation

6.5.1.1 _CRT_SECURE_NO_WARNINGS `#define _CRT_SECURE_NO_WARNINGS`

6.6 ac_monitor_type.cpp File Reference

6.7 ac_monitor_type.hh File Reference

Classes

- class **acmon::ac_monitor_t**
A class for converting AC variables to Parser monitors of correct type.

Namespaces

- **acmon**

Namespace for displaying ac variables as parser monitors.

6.8 ac_mul.cpp File Reference

6.9 ac_mul.hh File Reference

Classes

- class **ac_mul_t**

*The class which implements the **ac_mul_t** (p. 209) plugin.*

Enumerations

- enum **arg_type_t** { **ARG_RR**, **ARG_RC**, **ARG_CR**, **ARG_CC** }

Indicates whether the factors of the product are real or complex valued.

- enum **val_type_t** { **VAL_REAL**, **VAL_COMPLEX** }

Indicates whether an AC variable contains real or complex values.

6.9.1 Enumeration Type Documentation

6.9.1.1 **arg_type_t** `enum arg_type_t`

Indicates whether the factors of the product are real or complex valued.

Enumerator

ARG_RR	Both factors are real.
ARG_RC	First factor is real, second is complex.
ARG_CR	First factor is complex, second is real.
ARG_CC	Both factors are complex.

6.9.1.2 `val_type_t` enum `val_type_t`

Indicates whether an AC variable contains real or complex values.

Enumerator

VAL_REAL	AC variable contains real values.
VAL_COMPLEX	AC variable contains complex values.

Macros

- #define **DUPVEC**(x) v.x.data = **MHASignal::dupvec_chk**(v.x.data,s)

Functions

- static unsigned int **get_audiochannels** (unsigned int totalchannels, std::string acname, **MHA_AC::algo_comm_t** &ac)

The dynamic compressor implemented by plugin dc was created to perform multi-band dynamic compression as found in hearing aids.

6.48.1 Macro Definition Documentation

6.48.1.1 DUPVEC #define DUPVEC(
x) v.x.data = **MHASignal::dupvec_chk**(v.x.data,s)

6.48.2 Function Documentation

```
6.48.2.1 get_audiochannels() static unsigned int get_audiochannels (
    unsigned int totalchannels,
    std::string acname,
    MHA_AC::algo_comm_t & ac ) [static]
```

The dynamic compressor implemented by plugin `dc` was created to perform multi-band dynamic compression as found in hearing aids.

In hearing aid simulation tasks, openMHA will normally simulate either one or two hearing aids (i.e., aid one or two ears).

The filter bank which splits the broadband input signal from left and/or right microphone is not part of plugin `dc`. openMHA researchers can use a filterbank plugin of their choice, e.g. `fftfilterbank`. Filter banks split broadband signal channels into multiple narrow-band signal channels: A filter bank with 10 frequency bands would split one broadband signal channel into 10 narrow-band signal channels, and the `dc` plugin will then only see these 10 narrow-band audio signal channels. The same filter bank would split 2 broadband channels into 20 narrow-band channels, i.e. 10 channels per ear.

For hearing aid fitting, the fitting rule should be able to detect if the `dc` plugin fits one hearing aid or two hearing aids. The `dc` plugin can normally not derive this information from the incoming audio signal dimensions alone, but the filterbank that was used to split the broadband signals into narrow-band signal knows the original number of broadband channels. MHA filterbank plugins therefore publish an AC variable containing the original number of broadband audio channels, which were present before the filterbank split the signal into frequency bands.

This function accesses the AC space and reads the number of broadband audio channels from the AC variable `acname`, which must be given by the configuration and should identify the AC variable published by the filter bank for this purpose.

If `acname` is empty, then the function parameter `totalchannels` is returned instead, assuming that there was no filterbank and all input channels that the `dc` plugin receives are broadband audio channels.

Parameters

<i>totalchannels</i>	The number of audio channels that <code>dc</code> receives from the MHA (MHA informs plugins about the number of input signal channels with the <code>prepare()</code> callback). If the <code>dc</code> plugin processes the output signal of a filter bank, then this will be the equal to the number of broadband input channels multiplied by the number of filter bank bands. If not, this will already be the number of broadband input channels.
<i>acname</i>	If non-empty, name of an AC variable that contains the number of broadband input processed by an up-stream filter bank plugin. An empty <code>acname</code> denotes that no filter bank is present and that the <code>dc</code> plugin directly processes broadband audio signals.
<i>ac</i>	Algorithm communication variable space, needed to access AC variable <code>acname</code> .

Returns

The number of broadband audio channels from which the input signal of `dc` was generated. This will usually be 1 or 2 for normal hearing aid simulation task, but the `dc` plugin is not restricted to process only 1 or 2 broadband signals, therefore other return values are possible, but then hearing aid fitting rules querying the `dc` plugin may become confused.

Warning

Since this function accesses the AC variable space, it may only be called in situation where a plugin is allowed to interact with the AC variable space. This function should be called from `prepare()`

6.49 dc.hh File Reference

Classes

- class **dc::dc_vars_t**
Collection of configuration variables of the `dc` plugin.
- class **dc::dc_vars_validator_t**
Consistency checker.
- class **dc::dc_t**
Runtime configuration class of dynamic compression plugin `dc`.
- class **dc::dc_if_t**
Plugin interface class of the dynamic compression plugin `dc`.

Namespaces

- **dc**
Namespace containing all classes of the `dc` plugin which performs dynamic compression.

6.52 dc_simple.cpp File Reference

Namespaces

- **dc_simple**

Functions

- void **dc_simple::test_fail** (const std::vector< float > &v, unsigned int s, const std::string &name)
Checks size of vector.
- std::vector< float > **dc_simple::force_resize** (const std::vector< float > &v, unsigned int s, const std::string &name)
Creates a copy of vector v with s elements, provided that v has either s elements or 1 elements.
- **mha_real_t dc_simple::not_zero** (mha_real_t x, const std::string &comment)
Helper function to throw an error if x is 0.

6.53 dc_simple.hh File Reference

Classes

- class **dc_simple::dc_vars_t**
*class for **dc_simple** (p. 88) plugin which registers variables to **MHAParser** (p. 123).*
- class **dc_simple::dc_vars_validator_t**
Helper class to check sizes of configuration variable vectors.
- class **dc_simple::level_smoother_t**
Class which computes smoothed input levels on individual bands, using an attack and release filter, which are a first order low pass filter and a maximum tracker filter, respectively.
- class **dc_simple::dc_t**
*Runtime config class for **dc_simple** (p. 88) plugin.*
- class **dc_simple::dc_t::line_t**
Helper class for usage in computing compression, expansion and limiting.
- class **dc_simple::dc_if_t**
*interface class for **dc_simple** (p. 88)*

Namespaces

- **dc_simple**

Typedefs

- typedef **MHAPLugin::plugin_t**< dc_t > **dc_simple::DC**
Define alternate name for runtime_cfg_t.
- typedef **MHAPLugin::config_t**< level_smoother_t > **dc_simple::LEVEL**
Define alternate name for config_t.

Functions

- void **dc_simple::test_fail** (const std::vector< float > &v, unsigned int s, const std::string &name)
Checks size of vector.
- std::vector< float > **dc_simple::force_resize** (const std::vector< float > &v, unsigned int s, const std::string &name)
Creates a copy of vector v with s elements, provided that v has either s elements or 1 elements.
- **mha_real_t dc_simple::not_zero** (mha_real_t x, const std::string &comment)
Helper function to throw an error if x is 0.

One-dimensional linear interpolation.

- **mha_real_t DynComp::interp2** (const std::vector< **mha_real_t** > &vX, const std::vector< **mha_real_t** > &vY, const std::vector< std::vector< **mha_real_t** > > &mZ, **mha_real_t** X, **mha_real_t** Y)

Linear interpolation in a two-dimensional field.

6.97 generatemhaplugindoc.cpp File Reference

Classes

- class **plug_wrapper1**
- class **io_wrapper**
- class **plug_wrapper**
- class **latex_doc_t**

Class to access the information stored in the plugin source code's MHAPLUGIN_DOCUMENTATION macro.

Functions

- std::string **conv2latex** (std::string s, bool iscolored=false)

Escapes various character sequences in texts not intended to be processed by LaTeX for processing by LaTeX.

- static void **print_plugin_references** (const **std::set**< std::string > &all_categories, std::map< std::string, std::vector< std::string > > main_category_plugins, std::map< std::string, std::vector< std::string > > additional_category_plugins, std::ofstream &ofile, const std::string &category_macro)

Function prints an overview of all categories and their associated plugins into the document.

- std::vector< std::string > **create_latex_doc** (std::map< std::string, std::string > &doc, const std::string &pluginname, const std::string &plugin_macro)

Loads the plugin, creates the latex documentation for the plugin, and adds the latex documentation for this plugin to the plugin's main category entry in doc.

- int **main** (int argc, char **argv)

6.97.1 Function Documentation

6.97.1.1 conv2latex() `std::string conv2latex (`
`std::string s,`
`bool iscolored = false)`

Escapes various character sequences in texts not intended to be processed by LaTeX for processing by LaTeX.

Focus is on correct display of symbols contained in these texts. E.g. the help texts of MHA configuration variables can be processed by this function. The contents of the MHA_PLUGIN↔_DOCUMENTATION is already in LaTeX format and should not be processed by this function.

Returns

A copy of `s` with various symbols escaped for LaTeX processing

Parameters

<code>s</code>	Text not ready for LaTeX
<code>iscolored</code>	if true, the complete returned text is surrounded with <code>"\color{monitorcolor}{"</code> and <code>"}"</code>

6.97.1.2 print_plugin_references() `static void print_plugin_references (`
`const std::set< std::string > & all_categories,`
`std::map< std::string, std::vector< std::string > > main_category_↔`
`plugins,`
`std::map< std::string, std::vector< std::string > > additional_category_↔`
`_plugins,`
`std::ofstream & ofile,`
`const std::string & category_macro) [static]`

Function prints an overview of all categories and their associated plugins into the document.

Parameters

<code>all_categories</code>	A sorted container with all category names
<code>main_category_plugins</code>	map of main categories to plugin names
<code>additional_category_plugins</code>	map of tags to plugin names
<code>ofile</code>	Latex document is produced by writing output to this stream

6.97.1.3 create_latex_doc() `std::vector<std::string> create_latex_doc (`
`std::map< std::string, std::string > & doc,`
`const std::string & pluginname,`
`const std::string & plugin_macro)`

Loads the plugin, creates the latex documentation for the plugin, and adds the latex documentation for this plugin to the plugin's main category entry in doc.

Returns

the vector of all categories.

Parameters

<i>doc</i>	map of main categories to a string containint the documentation of all plugins in that categories. The documentation of the current plugin will be appended to the existing documentation of its main category. Will be created if non-existent.
<i>pluginname</i>	Name of the MHA plugin to process
<i>plugin_macro</i>	name of the LaTeX section macro that documents a single plugin (e.g. "section", "subsection", "subsubsection", ...)

6.97.1.4 main() `int main (`
`int argc,`
`char ** argv)`

Gammatone Filterbank Analyzer Plugin.

Classes

- struct **gtfb_analyzer::gtfb_analyzer_cfg_t**
Configuration for Gammatone Filterbank Analyzer.
- class **gtfb_analyzer::gtfb_analyzer_t**
Gammatone Filterbank Analyzer Plugin.

Namespaces

- **gtfb_analyzer**

Functions

- static const **mha_complex_t** & **filter_complex** (const **mha_complex_t** &input, const **mha_complex_t** &coeff, **mha_complex_t** *states, unsigned orders)
Filters a complex input sample with the given filter coefficient.
- static const **mha_complex_t** & **filter_real** (**mha_real_t** input, **mha_complex_t** &tmp←
_complex, const **mha_complex_t** &coeff, **mha_complex_t** *states, unsigned orders, const **mha_complex_t** &normphase)
Filters a real input sample with the given filter coefficient and applies the given normalization with phase correction.

6.102.1 Detailed Description

Gammatone Filterbank Analyzer Plugin.

6.102.2 Function Documentation

6.102.2.1 filter_complex() static const **mha_complex_t** & filter_complex (
const **mha_complex_t** & input,
const **mha_complex_t** & coeff,
mha_complex_t * states,
unsigned orders) [inline], [static]

Filters a complex input sample with the given filter coefficient.

No normalization takes place. The implementation is tail-recursive and to exploit compiler optimization.

Parameters

<i>input</i>	The complex input sample
<i>coeff</i>	The complex filter coefficient
<i>states</i>	Pointer to the array of complex filter states.
<i>orders</i>	The filter order

Returns

A const ref to the filtered sample

```

6.102.2.2 filter_real() static const mha_complex_t& filter_real (
    mha_real_t input,
    mha_complex_t & tmp_complex,
    const mha_complex_t & coeff,
    mha_complex_t * states,
    unsigned orders,
    const mha_complex_t & normphase ) [inline], [static]

```

Filters a real input sample with the given filter coefficient and applies the given normalization with phase correction.

Parameters

<i>input</i>	The real input sample
<i>tmp_complex</i>	A reference to a mha_complex_t (p. 799) used for intermediate results. No assumptions should be made about the state of tmp_complex after the return of filter_real. This is an optimization to reduce the number of dtor/ctor calls of mha_complex_t (p. 799)
<i>coeff</i>	The complex filter coefficient
<i>states</i>	Pointer to the array of complex filter states.
<i>orders</i>	The filter order
<i>normphase</i>	Normalization coefficient including the phase correction

Returns

A const ref to the filtered sample

6.103 gtfb_simd.cpp File Reference

Gammatone Filterbank Analyzer Plugin using SIMD.

Classes

- class **gtfb_simd_cfg_t**
- class **gtfb_simd_t**

Macros

- #define **add4f**(a, b) __builtin_ia32_addps(a,b)
- #define **sub4f**(a, b) __builtin_ia32_subps(a,b)
- #define **mul4f**(a, b) __builtin_ia32_mulps(a,b)
- #define **MXCSR_DAZ** (1 << 6) /* Enable denormals are zero mode */
- #define **MXCSR_FTZ** (1 << 15) /* Enable flush to zero mode */
- #define **check_alignment**(ptr, alignment)
Checks alignment of pointer address.

Functions

- void **filter_sisd_complex** (const unsigned bands, const unsigned order, const **mha_↵_complex_t** *inputs, **mha_complex_t** *outputs, const **mha_complex_t** *coefficients, **mha_complex_t** *states)

Filters one sample per band, using SISD operations and the mha_complex operations.

- void **filter_sisd_real** (const unsigned bands, const unsigned order, const **mha_↵_complex_t** *inputs, **mha_complex_t** *outputs, const **mha_complex_t** *coefficients, **mha_complex_t** *states)

Filters one sample per band, using SISD operations and real operations (operating on real and imaginary part as necessary).

- void **filter_simd** (const unsigned bands, const unsigned order, const **mha_real_↵_t** *rinputs, const **mha_real_t** *iinputs, **mha_real_t** *routputs, **mha_real_t** *ioutputs, const **mha_real_t** *rcoefficients, const **mha_real_t** *icoefficients, **mha_real_t** *rstates, **mha_real_t** *istates)

Filters one sample per band, using simd operations on float32 To process more than one sample, the function must be called repeatedly in correct order (from oldest sample to newest sample), and the calling function must preserve the filter state (parameters rstates and istates).

6.103.1 Detailed Description

Gammatone Filterbank Analyzer Plugin using SIMD.

A single-instruction-multiple-data (SIMD) implementation of a gammatone filterbank (GTFB)

Not all functions in this file are actually used. Read the functions in this file as a path to convert an algorithm, here complex-valued gammatone filtering as introduced in Hohmann 2002, from a single-instruction-single-data (SISD) implementation that uses complex arithmetic operations to a SIMD implementation of the same, splitting the complex arithmetic operations into their defining real operations, i.e $(a+b).real==a.real+b.real$, $(a+b).imag==a.imag+b.imag$, $(a*b).real==a.real*b.real-a.imag*b.imag$, $(a*b).imag==a.real*b.imag+a.imag*b.real$.

6.103.2 Macro Definition Documentation

6.103.2.1 add4f #define add4f(
 a,
 b) __builtin_ia32_addps(a,b)

```
6.103.2.2 sub4f #define sub4f(  
    a,  
    b ) __builtin_ia32_subps(a,b)
```

```
6.103.2.3 mul4f #define mul4f(  
    a,  
    b ) __builtin_ia32_mulps(a,b)
```

```
6.103.2.4 MXCSR_DAZ #define MXCSR_DAZ (1 << 6) /* Enable denormals are zero  
mode */
```

```
6.103.2.5 MXCSR_FTZ #define MXCSR_FTZ (1 << 15) /* Enable flush to zero mode */
```

```
6.103.2.6 check_alignment #define check_alignment(  
    ptr,  
    alignment )
```

Checks alignment of pointer address.

Parameters

<i>ptr</i>	pointer to check
<i>alignment</i>	required alignment

Exceptions

<i>MHA_Error</i> (p. 818)	if ptr is not aligned as required.
---	------------------------------------

6.103.3 Function Documentation

6.103.3.1 filter_sisd_complex() `void filter_sisd_complex (`
`const unsigned bands,`
`const unsigned order,`
`const mha_complex_t * inputs,`
`mha_complex_t * outputs,`
`const mha_complex_t * coefficients,`
`mha_complex_t * states)`

Filters one sample per band, using SISD operations and the `mha_complex` operations.

To process more than one sample, the function must be called repeatedly in correct order (from oldest sample to newest sample), and the calling function must preserve the filter state (parameter states).

This function is not actually used in this plugin, but can be used for testing. It implements the Hohmann 2002 filtering in the most readable form, and is translated towards a SIMD implementation in the following functions.

Parameters

<i>bands</i>	Number of total bands to compute (i.e. <code>input_channels * num_frequencies</code>)
<i>order</i>	Gammatone filter order
<i>inputs</i>	Pointer to array of complex input samples, only 1 sample per band
<i>outputs</i>	Pointer to array with space for output samples, 1 complex sample per band
<i>coefficients</i>	Pointer to array of recursive filter coefficient, 1 coefficient per band. The same coefficient is reused for all filter orders.
<i>states</i>	Pointer to array of complex filter states. Array size is <code>bands*order</code> . Initialize all elements with zeros before filtering the first sample. Filter state values will be modified by the function. For filtering the next sample, this function needs the filter state array from filtering the previous sample again, unmodified. The filter state of band <code>b</code> , order <code>o</code> can be found at index <code>[b+o*bands]</code>

6.103.3.2 filter_sisd_real() `void filter_sisd_real (`
`const unsigned bands,`
`const unsigned order,`
`const mha_complex_t * inputs,`
`mha_complex_t * outputs,`
`const mha_complex_t * coefficients,`
`mha_complex_t * states) [inline]`

Filters one sample per band, using SISD operations and real operations (operating on real and imaginary part as necessary).

To process more than one sample, the function must be called repeatedly in correct order (from oldest sample to newest sample), and the calling function must preserve the filter state (parameter states).

This function is not actually used in this plugin, but can be used for testing. It reimplements `filter_sisd_complex`, but expands the complex operations into real arithmetics.

Parameters

<i>bands</i>	Number of total bands to compute (i.e. <code>input_channels * num_frequencies</code>)
<i>order</i>	Gammatone filter order
<i>inputs</i>	Pointer to array of complex input samples, only 1 sample per band
<i>outputs</i>	Pointer to array with space for output samples, 1 complex sample per band
<i>coefficients</i>	Pointer to array of recursive filter coefficient, 1 coefficient per band. The same coefficient is reused for all filter orders.
<i>states</i>	Pointer to array of complex filter states. Array size is <code>bands*order</code> . Initialize all elements with zeros before filtering the first sample. Filter state values will be modified by the function. For filtering the next sample, this function needs the filter state array from filtering the previous sample again, unmodified. The filter state of band <code>b</code> , order <code>o</code> can be found at index <code>[b+o*bands]</code>

```

6.103.3.3 filter_simd() void filter_simd (
    const unsigned bands,
    const unsigned order,
    const mha_real_t * rinputs,
    const mha_real_t * iinputs,
    mha_real_t * routputs,
    mha_real_t * ioutputs,
    const mha_real_t * rcoefficients,
    const mha_real_t * icoefficients,
    mha_real_t * rstates,
    mha_real_t * istates ) [inline]

```

Filters one sample per band, using simd operations on float32 To process more than one sample, the function must be called repeatedly in correct order (from oldest sample to newest sample), and the calling function must preserve the filter state (parameters `rstates` and `istates`).

This reimplements `filter_sisd_real`, but uses the CPU's vector registers for the arithmetics, and is actually used by this plugin.

Parameters

<i>bands</i>	Number of total bands to compute (i.e. <code>input_channels * num_frequencies</code>) <code>bands</code> is also the size of the arrays pointed to by <code>rinputs</code> , <code>iinputs</code> , <code>routputs</code> , <code>ioutputs</code> , <code>rcoefficients</code> , <code>icoefficients</code> .
<i>order</i>	Gammatone filter order
<i>rinputs</i>	Pointer to array of the real part of input samples
<i>iinputs</i>	Pointer to array of the imaginary part of input samples
<i>routputs</i>	Pointer to array with space for the real parts of the output samples
<i>ioutputs</i>	Pointer to array with space for the imaginary parts of the output samples
<i>rcoefficients</i>	Pointer to array of the real parts of the recursive filter coefficients

Parameters

<i>icoefficients</i>	Pointer to array of the imaginary parts of the filter coefficients
<i>rstates</i>	Pointer to array of real parts of filter states. Array size is <code>bands*order</code> . Initialize all elements with zeros before filtering the first sample. Filter state values will be modified by the function. For filtering the next sample, this function needs the filter state arrays from filtering the previous sample again, unmodified. The real part of the filter state of band <code>b</code> , order <code>o</code> can be found at index <code>[b+o*bands]</code>
<i>istates</i>	Pointer to array of imaginary parts of filter states. Array size is <code>bands*order</code> . Initialize all elements with zeros before filtering the first sample. Filter state values will be modified by the function. For filtering the next sample, this function needs the filter state arrays from filtering the previous sample again, unmodified. The imaginary part of the filter state of band <code>b</code> , order <code>o</code> can be found at index <code>[b+o*bands]</code>

6.127.4 Enumeration Type Documentation

6.127.4.1 MHA_AC_TYPE_CONSTANTS enum **MHA_AC_TYPE_CONSTANTS** : unsigned int

Values for the **MHA_AC::comm_var_t::data_type** (p. 783) `data_type` field of AC variables in **MHA_AC::comm_var_t** (p. 782).

Enumerator

MHA_AC_UNKNOWN	This value should not be used for AC variables in the AC space. It may be used to indicate that the MHA_AC::comm_var_t (p. 782) struct has not yet been initialized.
MHA_AC_CHAR	The AC variable points to value(s) of type <code>char</code> .
MHA_AC_INT	The AC variable points to value(s) of type <code>int</code> .
MHA_AC_MHAREAL	The AC variable points to value(s) of type <code>mha_real_t</code> .
MHA_AC_FLOAT	The AC variable points to value(s) of type <code>float</code> .
MHA_AC_DOUBLE	The AC variable points to value(s) of type <code>double</code> .
MHA_AC_MHACOMPLEX	The AC variable points to value(s) of type <code>mha_complex_t</code> .
MHA_AC_USER	This value or any higher value for the MHA_AC::comm_var_t::data_type (p. 783) field indicate that the AC variable is of a user-defined data type.

6.127.5 Variable Documentation

6.127.5.1 MHAStrError_t const typedef char* (* MHAStrError_t) (void *h, int err)

6.127.5.2 MHAPluginDocumentation_t `const typedef char>(* MHAPluginDocumentation←
_t) (void)`

6.127.5.3 MHAPluginCategory_t `const typedef char>(* MHAPluginCategory_t) (void)`

6.128 mha_algo_comm.cpp File Reference

6.129 mha_algo_comm.hh File Reference

Header file for Algorithm Communication.

Classes

- class **MHA_AC::spectrum_t**
- class **MHA_AC::waveform_t**
- class **MHA_AC::stat_t**
- class **MHA_AC::ac2matrix_helper_t**
- class **MHA_AC::ac2matrix_t**
Copy AC variable to a matrix.
- class **MHA_AC::acspace2matrix_t**
Copy all or a subset of all numeric AC variables into an array of matrixes.
- class **MHA_AC::comm_var_map_t**
Storage class for the AC variable space.
- class **MHA_AC::algo_comm_t**
Algorithm communication variable space interface.
- class **MHA_AC::algo_comm_class_t**
AC variable space implementation.
- class **MHA_AC::scalar_t< numeric_t, MHA_AC_TYPECODE >**

Namespaces

- **MHA_AC**

Typedefs

- typedef scalar_t< int, **MHA_AC_INT** > **MHA_AC::int_t**
Convenience class for inserting an integer variable into the AC space.
- typedef scalar_t< float, **MHA_AC_FLOAT** > **MHA_AC::float_t**
Convenience class for inserting a single-precision floating-point variable into the AC space.
- typedef scalar_t< double, **MHA_AC_DOUBLE** > **MHA_AC::double_t**
Convenience class for inserting a double-precision floating-point variable into the AC space.

Functions

- **mha_spec_t MHA_AC::get_var_spectrum** (**algo_comm_t** &ac, const std::string &name)
Convert an AC variable into a spectrum.
- **mha_wave_t MHA_AC::get_var_waveform** (**algo_comm_t** &ac, const std::string &name)
Convert an AC variable into a waveform.
- int **MHA_AC::get_var_int** (**algo_comm_t** &ac, const std::string &name)
Return value of an integer scalar AC variable.
- float **MHA_AC::get_var_float** (**algo_comm_t** &ac, const std::string &name)
Return value of an floating point scalar AC variable.
- std::vector< float > **MHA_AC::get_var_vfloat** (**algo_comm_t** &ac, const std::string &name)
Return value of an floating point vector AC variable as standard vector of floats.

6.129.1 Detailed Description

Header file for Algorithm Communication.

Functions and classes for Algorithm Communication (AC) support.

6.130 mha_defs.h File Reference

Preprocessor definitions common to all MHA components.

Macros

- #define **CHECK_EXPR**(x) {if(!(x)){throw **MHA_Error**(__FILE__,__LINE__,"The expression \"\" #x \"\" is invalid.");}}

6.133 mha_error.cpp File Reference

Implementation of openMHA error handling.

Namespaces

- **mha_error_helpers**

Functions

- unsigned **mha_error_helpers::digits** (unsigned n)
Compute number of decimal digits required to represent an unsigned integer.
- unsigned **mha_error_helpers::snprintf_required_length** (const char *formatstring,...)
snprintf_required_length Compute the number of bytes (excluding the terminating nul) required to store the result of an snprintf.
- void **mha_debug** (const char *fmt,...)

6.133.1 Detailed Description

Implementation of openMHA error handling.

This file forms a separate library.

6.133.2 Function Documentation

6.133.2.1 mha_debug() `void mha_debug (`
`const char * fmt,`
`...)`

6.134 mha_error.hh File Reference

Classes

- class **MHA_Error**
Error reporting exception class.

Namespaces

- **mha_error_helpers**

Macros

- #define **Getmsg(e)** ((e).get_msg())
- #define **MHA_ErrorMsg(x)** **MHA_Error**(__FILE__, __LINE__, "%s", x)
Throw an openMHA error with a text message.
- #define **MHA_assert(x)** if(!x) throw **MHA_Error**(__FILE__, __LINE__, "\"%s\" is false.", #x)
*Assertion macro, which throws an **MHA_Error** (p. 818).*
- #define **MHA_assert_equal(a, b)** if(a != b) throw **MHA_Error**(__FILE__, __LINE__,
 , "\"%s == %s\" is false (%s = %g, %s = %g).", #a, #b, #a, (double)(a), #b, (double)(b))
*Equality assertion macro, which throws an **MHA_Error** (p. 818) with the values.*

Functions

- void **mha_debug** (const char *fmt,...) `__attribute__((__format__(printf`
Print an info message (stderr on Linux, OutputDebugString in Windows).
- unsigned **mha_error_helpers::digits** (unsigned n)
Compute number of decimal digits required to represent an unsigned integer.
- unsigned **mha_error_helpers::snprintf_required_length** (const char *formatstring,...)
snprintf_required_length Compute the number of bytes (excluding the terminating nul) required to store the result of an snprintf.

6.134.1 Macro Definition Documentation

6.134.1.1 Getmsg #define Getmsg(
e) ((e).get_msg())

6.135 mha_event_emitter.h File Reference

Classes

- class **MHAEvents::connector_base_t**
- class **MHAEvents::emitter_t**
Class for emitting openMHA events.

Namespaces

- **MHAEvents**
Collection of event handling classes.

6.136 mha_events.cpp File Reference

6.137 mha_events.h File Reference

Classes

- class **MHAEvents::connector_t< receiver_t >**
- class **MHAEvents::patchbay_t< receiver_t >**
Patchbay which connects any event emitter with any member function of the parameter class.

Namespaces

- **MHAEvents**
Collection of event handling classes.

6.138 mha_fftb.cpp File Reference

Classes

- class **MHAOvIFilter::barkscale::hz2bark_t**
- class **MHAOvIFilter::barkscale::bark2hz_t**

Namespaces

- **MHAOvIFilter**
Namespace for overlapping FFT based filter bank classes and functions.
- **MHAOvIFilter::barkscale**
- **MHAOvIFilter::FreqScaleFun**
Transform functions from linear scale in Hz to new frequency scales.
- **MHAOvIFilter::ShapeFun**
Shape functions for overlapping filters.

Macros

- #define **BARKSCALE_ENTRIES** 50

Functions

- **mha_real_t MHAOvIFilter::FreqScaleFun::hz2hz** (mha_real_t x)
Dummy scale transformation Hz to Hz.
- **mha_real_t MHAOvIFilter::FreqScaleFun::hz2khz** (mha_real_t x)
- **mha_real_t MHAOvIFilter::FreqScaleFun::hz2octave** (mha_real_t x)
- **mha_real_t MHAOvIFilter::FreqScaleFun::hz2third_octave** (mha_real_t x)
- **mha_real_t MHAOvIFilter::FreqScaleFun::hz2bark** (mha_real_t x)
Transformation to bark scale.
- **mha_real_t MHAOvIFilter::FreqScaleFun::hz2bark_analytic** (mha_real_t)
- **mha_real_t MHAOvIFilter::FreqScaleFun::hz2erb** (mha_real_t)

- **mha_real_t MHAOvIFilter::FreqScaleFun::hz2log** (mha_real_t x)
Third octave frequency scale.
- **mha_real_t MHAOvIFilter::FreqScaleFun::inv_scale** (mha_real_t, mha_real_t(*) (mha_real_t))
- **mha_real_t MHAOvIFilter::ShapeFun::rect** (mha_real_t x)
Filter shape function for rectangular filters.
- **mha_real_t MHAOvIFilter::ShapeFun::linear** (mha_real_t x)
Filter shape function for sawtooth filters.
- **mha_real_t MHAOvIFilter::ShapeFun::hann** (mha_real_t x)
Filter shape function for hanning shaped filters.
- **mha_real_t MHAOvIFilter::ShapeFun::expflt** (mha_real_t)
- **mha_real_t MHAOvIFilter::ShapeFun::gauss** (mha_real_t)
- **mha_real_t filtershapefun** (mha_real_t f, MHAOvIFilter::band_descriptor_t b, mha_real_t plateau)
Transform the test frequency into the relative position on the filter flank of the given frequency band.

Variables

- `mha_real_t MHAOvFilter::barkscale::vfreq [BARKSCALE_ENTRIES]`
- `mha_real_t MHAOvFilter::barkscale::vbark [BARKSCALE_ENTRIES]`

6.138.1 Macro Definition Documentation

6.138.1.1 BARKSCALE_ENTRIES `#define BARKSCALE_ENTRIES 50`

6.138.2 Function Documentation

6.138.2.1 filtershapefun() `mha_real_t filtershapefun (`
`mha_real_t f,`
`MHAOvFilter::band_descriptor_t b,`
`mha_real_t plateau)`

Transform the test frequency into the relative position on the filter flank of the given frequency band.

Parameters

<i>f</i>	Test frequency in units corresponding to the chosen frequency scale
<i>b</i>	Descriptor of a single filter bank band: E.g. contains center frequencies of this and the two adjacent bands, and the crossover ("edge") frequencies of this band.
<i>plateau</i>	For non-rectangular filter shapes, specifies what frequency portion of the band around its center frequency should have no attenuation applied.

Precondition

$0 \leq \text{plateau} \leq 1$

Returns

The position of frequency *f* on the filter flank as follows: A returned position of 0 means that *f* is equal to the band's center frequency, or should be treated the same as the center frequency (i.e. is within the band's plateau). A returned position of -1 means that *f* is \leq the lowest frequency of the filter flank (or is an even lower frequency). A returned value of -0.5 means that *f* is equal to the lower edge frequency. Positive returned values have equivalent meanings for the high half of the filter flank.

6.139 mha_fftfb.hh File Reference

Classes

- class **MHAOvFilter::band_descriptor_t**
- class **MHAOvFilter::scale_var_t**
- class **MHAOvFilter::fscale_t**
- class **MHAOvFilter::fscale_bw_t**
- class **MHAOvFilter::fftfb_vars_t**
Set of configuration variables for FFT-based overlapping filters.
- class **MHAOvFilter::fspacing_t**
Class for frequency spacing, used by filterbank shape generator class.
- class **MHAOvFilter::fftfb_t**
FFT based overlapping filter bank.
- class **MHAOvFilter::overlap_save_filterbank_t**
*A time-domain minimal phase filter bank with frequency shapes from **MHAOvFilter::fftfb_t** (p. 1054).*
- class **MHAOvFilter::overlap_save_filterbank_t::vars_t**
- class **MHAOvFilter::overlap_save_filterbank_analytic_t**
- class **MHAOvFilter::fftfb_ac_info_t**

Namespaces

- **MHAOvFilter**
Namespace for overlapping FFT based filter bank classes and functions.

Typedefs

- typedef **mha_real_t()** **MHAOvFilter::scale_fun_t(mha_real_t)**

6.140 mha_fifo.cpp File Reference

6.141 mha_fifo.h File Reference

Classes

- class **mha_fifo_t< T >**
A FIFO class.
- class **mha_fifo_lf_t< T >**
A lock-free FIFO class for transferring data from a producer thread to a consumer thread.
- class **mha_drifter_fifo_t< T >**
A FIFO class for blocksize adaptation without Synchronization.

- class `mha_fifo_thread_platform_t`
Abstract base class for synchronizing multithreaded (producer/consumer) fifo operations.
- class `mha_fifo_posix_threads_t`
- class `mha_fifo_thread_guard_t`
Simple Mutex Guard Class.
- class `mha_fifo_lw_t< T >`
This FIFO uses locks to synchronize access.
- class `mha_dblbuf_t< FIFO >`
The doublebuffer adapts block sizes between an outer process, which provides input data and takes output data, and an inner process, which processes the input signal and generates output data using a different block size than the outer process.
- class `mha_rt_fifo_element_t< T >`
Object wrapper for `mha_rt_fifo_t` (p. 844).
- class `mha_rt_fifo_t< T >`
Template class for thread safe, half real time safe fifo without explicit locks.

Macros

- `#define mha_fifo_thread_platform_implementation_t mha_fifo_posix_threads_t`

6.141.1 Macro Definition Documentation

6.141.1.1 mha_fifo_thread_platform_implementation_t `#define mha_fifo_thread_↔
platform_implementation_t mha_fifo_posix_threads_t`

6.142 mha_filter.cpp File Reference

Functions

- `std::vector< mha_real_t > diff_coeffs ()`

6.142.1 Function Documentation

6.142.1.1 diff_coeffs() `std::vector< mha_real_t > diff_coeffs ()`

6.143 mha_filter.hh File Reference

Header file for IIR filter classes.

Classes

- class **MHAFilter::filter_t**
Generic IIR filter class.
- class **MHAFilter::diff_t**
Differentiator class (non-normalized)
- class **MHAFilter::o1_ar_filter_t**
First order attack-release lowpass filter.
- class **MHAFilter::o1flt_lowpass_t**
First order low pass filter.
- class **MHAFilter::o1flt_maxtrack_t**
First order maximum tracker.
- class **MHAFilter::o1flt_mintrack_t**
First order minimum tracker.
- class **MHAFilter::iir_filter_state_t**
- class **MHAFilter::iir_filter_t**
IIR filter class wrapper for integration into parser structure.
- class **MHAFilter::adapt_filter_state_t**
- class **MHAFilter::adapt_filter_param_t**
- class **MHAFilter::adapt_filter_t**
Adaptive filter.
- class **MHAFilter::fftfilter_t**
FFT based FIR filter implementation.
- class **MHAFilter::fftfilterbank_t**
FFT based FIR filterbank implementation.
- struct **MHAFilter::transfer_function_t**
a structure containing a source channel number, a target channel number, and an impulse response.
- struct **MHAFilter::transfer_matrix_t**
A sparse matrix of transfer function partitionss.
- class **MHAFilter::partitioned_convolution_t**
A filter class for partitioned convolution.
- struct **MHAFilter::partitioned_convolution_t::index_t**
Bookkeeping class.
- class **MHAFilter::smoothspec_t**
Smooth spectral gains, create a windowed impulse response.
- class **MHAFilter::resampling_filter_t**
Hann shaped low pass filter for resampling.
- class **MHAFilter::polyphase_resampling_t**
A class that performs polyphase resampling.
- class **MHAFilter::blockprocessing_polyphase_resampling_t**
A class that does polyphase resampling and takes into account block processing.
- class **MHAFilter::iir_ord1_real_t**
First order recursive filter.

Namespaces

- **MHAFilter**

Namespace for IIR and FIR filter classes.

Functions

- `template<typename T, typename std::enable_if< std::is_floating_point< T >::value, T >::type * = nullptr> void MHAFilter::make_friendly_number (T &x)`
- `void MHAFilter::o1_lp_coefs (const mha_real_t tau, const mha_real_t fs, mha_↔
real_t &c1, mha_real_t &c2)`
Set first order filter coefficients from time constant and sampling rate.
- `void MHAFilter::butter_stop_ord1 (double *A, double *B, double f1, double f2, double fs)`
Setup a first order butterworth band stop filter.
- `std::vector< float > MHAFilter::fir_lp (float f_pass_, float f_stop_, float fs_, unsigned order_)`
Setup a nth order fir low pass filter.
- `MHASignal::waveform_t * MHAFilter::spec2fir (const mha_spec_t *spec, const unsigned int fftlen, const MHAWindow::base_t &window, const bool minphase)`
Create a windowed impulse response/FIR filter coefficients from a spectrum.
- `unsigned MHAFilter::gcd (unsigned a, unsigned b)`
greatest common divisor
- `double MHAFilter::sinc (double x)`
sin(x)/x function, coping with x=0.
- `std::pair< unsigned, unsigned > MHAFilter::resampling_factors (float source_↔
sampling_rate, float target_sampling_rate, float factor=1.0f)`
Computes rational resampling factor from two sampling rates.

6.143.1 Detailed Description

6.153.1 Function Documentation

6.153.1.1 mha_hasenv() `bool mha_hasenv (const std::string & envvar)`

Checks if environment variable exists.

Parameters

<i>envvar</i>	Name of environment variable to check
---------------	---------------------------------------

Returns

true if the environment has a variable of this name

6.153.1.2 mha_getenv() `std::string mha_getenv (`
`const std::string & envvar)`

Get value of environment variable.

Parameters

<i>envvar</i>	Name of environment variable to retrieve
---------------	--

Returns

content of environment variable if it exists, empty string if the environment variable does not exist

6.153.1.3 mha_delenv() `void mha_delenv (`
`const std::string & envvar)`

Deletes environment variable from process environment if it exists.

Parameters

<i>envvar</i>	Name of environment variable to delete
---------------	--

6.153.1.4 mha_setenv() `int mha_setenv (`
`const std::string & envvar,`
`const std::string & value)`

Set value of environment variable.

Parameters

<i>envvar</i>	Name of environment variable to set
<i>value</i>	New content for environment variable

Returns

error code: 0 on success, OS dependent error code on failure

6.153.1.5 mha_library_paths() `std::list<std::string> mha_library_paths ()`

6.153.1.6 list_dir() `std::list<std::string> list_dir (`

6.154.2 Typedef Documentation

6.154.2.1 mha_libhandle_t `typedef void* mha_libhandle_t`

6.154.3 Function Documentation

6.154.3.1 mha_getenv() `std::string mha_getenv (
 const std::string & envvar)`

Get value of environment variable.

Parameters

<i>envvar</i>	Name of environment variable to retrieve
---------------	--

Returns

content of environment variable if it exists, empty string if the environment variable does not exist

6.154.3.2 mha_hasenv() `bool mha_hasenv (
 const std::string & envvar)`

Checks if environment variable exists.

Parameters

<i>envvar</i>	Name of environment variable to check
---------------	---------------------------------------

Returns

true if the environment has a variable of this name

6.154.3.3 mha_setenv() `int mha_setenv (`
 `const std::string & envvar,`
 `const std::string & value)`

Set value of environment variable.

Parameters

<i>envvar</i>	Name of environment variable to set
<i>value</i>	New content for environment variable

Returns

error code: 0 on success, OS dependent error code on failure

6.154.3.4 mha_delenv() `void mha_delenv (`
 `const std::string & envvar)`

Deletes environment variable from process environment if it exists.

Parameters

<i>envvar</i>	Name of environment variable to delete
---------------	--

6.154.3.5 mha_library_paths() `std::list<std::string> mha_library_paths ()`

6.154.3.6 list_dir() `std::list<std::string> list_dir (`
 `const std::string & path,`
 `const std::string & pattern)`

6.154.3.7 mha_hton() [1/3] `void mha_hton (`
 `float * data,`
 `unsigned int len) [inline]`

6.154.3.8 mha_ntoh() [1/3] `void mha_ntoh (`
 `float * data,`
 `unsigned int len) [inline]`

6.154.3.9 mha_hton() [2/3] `void mha_hton (`
 `uint32_t * data,`
 `unsigned int len) [inline]`

6.154.3.10 mha_ntoh() [2/3] `void mha_ntoh (`
 `uint32_t * data,`
 `unsigned int len) [inline]`

6.154.3.11 mha_hton() [3/3] `void mha_hton (`
 `int32_t * data,`
 `unsigned int len) [inline]`

6.154.3.12 mha_ntoh() [3/3] `void mha_ntoh (`
 `int32_t * data,`
 `unsigned int len) [inline]`

String converter namespace.

Macros

- `#define MHAPLATFORM "undefined-linux"`

Functions

- `int MHAParser::get_precision ()`
- `int MHAParser::StrCnv::num_brackets (const std::string &s)`
count number of brackets
- `int MHAParser::StrCnv::bracket_balance (const std::string &s)`
- `static std::ostream & write_float (std::ostream &o, const float &f)`
- `static std::string parse_1_float (const std::string &s, mha_real_t &v)`
This internal function parses a floating point number from the beginning of a string.
- `static void check_parenthesis_complex (const std::string &str)`
This function checks for unbalanced parenthesis in the string containing complex number.
- `static int check_sign_complex (const std::string &str)`
This function checks for valid sign (b/w real & img).
- `static std::string parse_1_complex (const std::string &s, mha_complex_t &v)`
This internal function parses a complex number from the beginning of a string.

6.155.1 Macro Definition Documentation

6.155.1.1 MHAPLATFORM `#define MHAPLATFORM "undefined-linux"`

6.155.2 Function Documentation

6.155.2.1 write_float() `static std::ostream& write_float (`
`std::ostream & o,`
`const float & f) [inline], [static]`

6.155.2.2 parse_1_float() `static std::string parse_1_float (`
`const std::string & s,`
`mha_real_t & v) [static]`

This internal function parses a floating point number from the beginning of a string.

Parameters

<i>s</i>	The string to parse
----------	---------------------

Precondition

`s.size() > 0`

Parameters

<i>v</i>	The float variable to fill with a value
----------	---

Returns

The rest of the string.

6.155.2.3 `check_parenthesis_complex()` `static void check_parenthesis_complex (const std::string & str) [static]`

This function checks for unbalanced parenthesis in the string containing complex number.

Parameters

<i>str</i>	The string to check. This function returns normally only when the string starts with an opening bracket and ends with a closing bracket.
------------	--

Precondition

`str.size() > 0`

Exceptions

<i>MHA_ErrorMsg</i>	This function raises an error with an appropriate error message if the string does not start with an opening bracket '(' or if it does not end with a closing bracket ')'
---------------------	---

6.155.2.4 `check_sign_complex()` `static int check_sign_complex (`

```
const std::string & str ) [static]
```

This function checks for valid sign (b/w real & img.

parts of complex number). It also checks if real part is missing in complex number.

Parameters

<i>str</i>	String containing sign and onward imaginary part.
------------	---

Precondition

`str.size() > 0`

Exceptions

<i>This</i>	function raises an error if wrong sign (other than '+' or '-') is found. It also raises error, if it finds 'i' instead of sign. This can happen when real part is missing in complex number and 'i' (of imaginary part) is found where sign was expected.
-------------	---

Returns

+1 for '+' sign and -1 for '-' sign

6.155.2.5 parse_1_complex() `static std::string parse_1_complex (`
`const std::string & s,`
`mha_complex_t & v) [static]`

This internal function parses a complex number from the beginning of a string.

Parameters

<i>s</i>	The string to parse
<i>v</i>	The complex variable to fill with a value

Exceptions

<i>MHA_ErrorMsg</i>	This function raises an error if s does not have characters except spaces, tabs etc
---------------------	---

Returns

The rest of the string.

Convert to string.
- std::string **MHAParser::StrCnv::val2str** (const std::vector< float > &)
Convert to string.
- std::string **MHAParser::StrCnv::val2str** (const std::vector< **mha_complex_t** > &)
Convert to string.
- std::string **MHAParser::StrCnv::val2str** (const std::vector< int > &)
Convert to string.
- std::string **MHAParser::StrCnv::val2str** (const std::vector< std::vector< int > > &)
Convert to string.
- std::string **MHAParser::StrCnv::val2str** (const std::vector< std::string > &)
Convert to string.
- std::string **MHAParser::StrCnv::val2str** (const std::vector< std::vector< float > > &)
Convert to string.
- std::string **MHAParser::StrCnv::val2str** (const std::vector< std::vector< **mha_complex_t** > > &)
Convert to string.
- int **MHAParser::StrCnv::num_brackets** (const std::string &s)
count number of brackets

Variables

- const typedef char *(**MHAParser::c_parse_err_t**)(void *, int)

6.156.1 Detailed Description

Header file for the MHA-Parser script language.

6.156.2 Macro Definition Documentation

6.156.2.1 **DEFAULT_RETSIZE** `#define DEFAULT_RETSIZE 0x100000`

6.156.2.2 **insert_member** `#define insert_member(x) insert_item(#x, &x)`

Macro to insert a member variable into a parser.

Parameters

<code>x</code>	Member variable to be inserted. Name of member variable will be used as configuration name.
----------------	---

See also `MHAParser::parser_t::insert_item()` (p. 1151).

6.157 mha_plugin.cpp File Reference

6.158 mha_plugin.hh File Reference

Header file for MHA C++ plugin class templates.

Classes

- class `MHAPugin::cfg_node_t< runtime_cfg_t >`
A node class for storing MHA plugin runtime configurations as a singly linked list, where the nodes store besides the usual "next" and "data" pointers also a flag that indicates whether this node can be deleted.
- class `MHAPugin::config_t< runtime_cfg_t >`
Template class for thread safe configuration.
- class `MHAPugin::plugin_t< runtime_cfg_t >`
The template class for C++ openMHA plugins.

Namespaces

- **MHAPugin**
Namespace for openMHA plugin class templates and thread-safe runtime configurations.

Macros

- #define **__declspec**(p)
- #define **WINAPI**
- #define **HINSTANCE** int
- #define **MHAPLUGIN_PROC_CALLBACK_PREFIX**(prefix, classname, indom, outdom)
- #define **MHAPLUGIN_SETCPP_CALLBACK_PREFIX**(prefix, classname)
- #define **MHAPLUGIN_INIT_CALLBACKS_PREFIX**(prefix, classname)
- #define **MHAPLUGIN_CALLBACKS_PREFIX**(prefix, classname, indom, outdom)
C++ wrapper macro for the plugin interface.
- #define **MHAPLUGIN_DOCUMENTATION_PREFIX**(prefix, cat, doc)
- #define **MHAPLUGIN_PROC_CALLBACK**(plugname, classname, indom, outdom) **MHAPLUGIN_PROC_CALLBACK_PREFIX**(MHA_STATIC_ ## plugname ## _,classname,indom,outdom)
- #define **MHAPLUGIN_INIT_CALLBACKS**(plugname, classname) **MHAPLUGIN_INIT_CALLBACKS_PREFIX**(MHA_STATIC_ ## plugname ## _,classname)
- #define **MHAPLUGIN_CALLBACKS**(plugname, classname, indom, outdom) **MHAPLUGIN_CALLBACKS_PREFIX**(MHA_STATIC_ ## plugname ## _,classname,indom,outdom)
C++ wrapper macro for the plugin interface.
- #define **MHAPLUGIN_DOCUMENTATION**(plugname, cat, doc) **MHAPLUGIN_DOCUMENTATION_PREFIX**(MHA_STATIC_ ## plugname ## _,cat,doc)
Wrapper macro for the plugin documentation interface.

6.158.1 Detailed Description

Header file for MHA C++ plugin class templates.

This file defines useful macros and template classes for the development of MHA plugins. A set of macros wraps a C++ interface around the ANSI-C plugin interface. The `plugin_t` template class defines a corresponding C++ class with all required members. This class can make use of thread safe configurations (`config_t`).

6.158.2 Macro Definition Documentation

6.158.2.1 `__declspec` #define `__declspec(`
`p)`

6.158.2.2 WINAPI #define WINAPI

6.158.2.3 HINSTANCE #define HINSTANCE int

6.158.2.4 MHAPLUGIN_PROC_CALLBACK_PREFIX #define MHAPLUGIN_PROC_CALLBACK_PREFIX(

```

    prefix,
    classname,
    indom,
    outdom )

```

6.158.2.5 MHAPLUGIN_SETCPP_CALLBACK_PREFIX #define MHAPLUGIN_SETCPP_CALLBACK_PREFIX(

```

    prefix,
    classname )

```

6.158.2.6 MHAPLUGIN_INIT_CALLBACKS_PREFIX #define MHAPLUGIN_INIT_CALLBACKS_PREFIX(

```

    prefix,
    classname )

```

6.158.2.7 MHAPLUGIN_CALLBACKS_PREFIX #define MHAPLUGIN_CALLBACKS_PREFIX(

```

    prefix,
    classname,
    indom,
    outdom )

```

C++ wrapper macro for the plugin interface.

Parameters

<i>classname</i>	The name of the plugin class
<i>indom</i>	Input domain (wave or spec)
<i>outdom</i>	Output domain (wave or spec)

This macro defines all required openMHA Plugin interface functions and passes calls of these functions to the corresponding member functions of the class `'classname'`. The parameters `'indom'` and `'outdom'` specify the input and output domain of the processing method. The `MHAInit()` and `MHADestroy()` functions will create or destroy an instance of the class. The appropriate member functions have to be defined in the class. It is suggested to make usage of the `MHAPlugin::plugin_t` (p. 1199) template class. Exceptions of type `MHA_Error` (p. 818) are caught and transformed into appropriate error codes with their corresponding error messages.

6.158.2.8 MHAPLUGIN_DOCUMENTATION_PREFIX `#define MHAPLUGIN_DOCUMENTATION_PREFIX(`
`prefix,`
`cat,`
`doc)`

6.158.2.9 MHAPLUGIN_PROC_CALLBACK `#define MHAPLUGIN_PROC_CALLBACK(`
`plugname,`
`classname,`
`indom,`
`outdom) MHAPLUGIN_PROC_CALLBACK_PREFIX(MHA_STATIC_ ## plugname ## _↔`
`,classname,indom,outdom)`

6.158.2.10 MHAPLUGIN_INIT_CALLBACKS `#define MHAPLUGIN_INIT_CALLBACKS(`
`plugname,`
`classname) MHAPLUGIN_INIT_CALLBACKS_PREFIX(MHA_STATIC_ ## plugname ##`
`_ ,classname)`

6.158.2.11 MHAPLUGIN_CALLBACKS `#define MHAPLUGIN_CALLBACKS(`
`plugname,`
`classname,`
`indom,`
`outdom) MHAPLUGIN_CALLBACKS_PREFIX(MHA_STATIC_ ## plugname ## _↔`
`,classname,indom,outdom)`

C++ wrapper macro for the plugin interface.

Parameters

<i>plugname</i>	The file name of the plugin without the .so or .dll extension
<i>classname</i>	The name of the plugin class
<i>indom</i>	Input domain (wave or spec)
<i>outdom</i>	Output domain (wave or spec)

This macro defines all required openMHA Plugin interface functions and passes calls of these functions to the corresponding member functions of the class 'classname'. The parameters 'indom' and 'outdom' specify the input and output domain of the processing method. The MHAInit() and MHADestroy() functions will create or destroy an instance of the class. The appropriate member functions have to be defined in the class. It is suggested to make usage of the **MHAPlugin::plugin_t** (p. 1199) template class. Exceptions of type **MHA_Error** (p. 818) are caught and transformed into appropriate error codes with their corresponding error messages.

6.158.2.12 MHAPLUGIN_DOCUMENTATION `#define MHAPLUGIN_DOCUMENTATION(
 plugname,
 cat,
 doc) MHAPLUGIN_DOCUMENTATION_PREFIX(MHA_STATIC_ ## plugname ## _↔
 , cat, doc)`

Wrapper macro for the plugin documentation interface.

Parameters

<i>plugname</i>	The file name of the plugin without the .so or .dll extension
<i>cat</i>	Space separated list of categories to which belong the plugin (as const char*)
<i>doc</i>	Documentation of the plugin (as const char*)

This macro defines the openMHA Plugin interface function for the documentation. The categories can be any space separated list of category names. An empty string will categorize the plugin in the category 'other'.

The documentation should contain a description of the plugin including a description of the underlying models, and a paragraph containing hints for usage. The text should be LaTeX compatible (e.g., avoid or quote underscores in the text part); equations should be formatted as LaTeX.

- **mha_spec_t** & **safe_div** (**mha_spec_t** &self, const **mha_spec_t** &v, **mha_real_t** eps)
In-Place division with lower limit on divisor.
- **mha_spec_t** & **operator/=** (**mha_spec_t** &self, const **mha_spec_t** &v)
Element-wise division operator.
- **mha_wave_t** & **operator/=** (**mha_wave_t** &self, const **mha_wave_t** &v)
Element-wise division operator.
- **mha_spec_t** & **operator+=** (**mha_spec_t** &self, const **mha_spec_t** &v)
Addition operator.
- **mha_spec_t** & **operator+=** (**mha_spec_t** &self, const **mha_real_t** &v)
Addition operator.
- **mha_wave_t** & **operator+=** (**mha_wave_t** &self, const **mha_wave_t** &v)
Addition operator.
- **mha_wave_t** & **operator-=** (**mha_wave_t** &self, const **mha_wave_t** &v)
Subtraction operator.
- **mha_spec_t** & **operator-=** (**mha_spec_t** &self, const **mha_spec_t** &v)
Subtraction operator.
- **mha_fft_t** **mha_fft_new** (unsigned int n)
Create a new instance of an FFT object.
- void **mha_fft_free** (**mha_fft_t** h)
Remove an FFT object.
- void **mha_fft_wave2spec** (**mha_fft_t** h, const **mha_wave_t** *in, **mha_spec_t** *out)
Perform an FFT on each channel of input waveform signal.
- void **mha_fft_wave2spec** (**mha_fft_t** h, const **mha_wave_t** *in, **mha_spec_t** *out, bool swap)
Tranform waveform segment into spectrum.
- void **mha_fft_spec2wave** (**mha_fft_t** h, const **mha_spec_t** *in, **mha_wave_t** *out)
Perform an inverse FFT on each channel of input spectrum.
- void **mha_fft_spec2wave** (**mha_fft_t** h, const **mha_spec_t** *in, **mha_wave_t** *out, unsigned int offset)
Perform an inverse FFT on each channel of input spectrum.

- void **mha_fft_forward** (**mha_fft_t** h, **mha_spec_t** *sIn, **mha_spec_t** *sOut)
Complex to complex FFT (forward).
- void **mha_fft_backward** (**mha_fft_t** h, **mha_spec_t** *sIn, **mha_spec_t** *sOut)
Complex to complex FFT (backward).
- void **mha_fft_forward_scale** (**mha_fft_t** h, **mha_spec_t** *sIn, **mha_spec_t** *sOut)
Complex to complex FFT (forward).
- void **mha_fft_backward_scale** (**mha_fft_t** h, **mha_spec_t** *sIn, **mha_spec_t** *sOut)
Complex to complex FFT (backward).
- void **mha_fft_wave2spec_scale** (**mha_fft_t** h, const **mha_wave_t** *in, **mha_spec_t** *out)
Tranform waveform segment into spectrum.
- void **mha_fft_spec2wave_scale** (**mha_fft_t** h, const **mha_spec_t** *in, **mha_wave_t** *out)
Tranform spectrum into waveform segment.
- std::vector< float > **std_vector_float** (const **mha_wave_t** &w)
*Converts a **mha_wave_t** (p. 894) structure into a std::vector<float> (interleaved order).*
- std::vector< std::vector< float > > **std_vector_vector_float** (const **mha_wave_t** &w)
*Converts a **mha_wave_t** (p. 894) structure into a std::vector< std::vector<float> > (outer vector represents channels).*
- std::vector< std::vector< **mha_complex_t** > > **std_vector_vector_complex** (const **mha_spec_t** &w)
*Converts a **mha_spec_t** (p. 848) structure into a std::vector< std::vector<mha_complex_t> > (outer vector represents channels).*
- static **mha_real_t** **intensity** (const **mha_spec_t** &s, unsigned int channel, unsigned int fftlen, **mha_real_t** *sqfreq_response=0)
- void **integrate** (**mha_wave_t** &s)
Numeric integration of a signal vector (real values)
- void **integrate** (**mha_spec_t** &s)
Numeric integration of a signal vector (complex values)
- **mha_wave_t** & **operator^=** (**mha_wave_t** &self, const **mha_real_t** &arg)
Exponent operator.
- **mha_wave_t** **range** (**mha_wave_t** s, unsigned int k0, unsigned int len)
Return a time interval from a waveform chunk.
- **mha_spec_t** **channels** (**mha_spec_t** s, unsigned int ch_start, unsigned int nch)
Return a channel interval from a spectrum.
- void **assign** (**mha_wave_t** self, const **mha_wave_t** &val)
Set all values of waveform 'self' to 'val'.
- void **assign** (**mha_spec_t** self, const **mha_spec_t** &val)
Set all values of spectrum 'self' to 'val'.
- void **timeshift** (**mha_wave_t** &self, int shift)
Time shift of waveform chunk.

6.162.1 Macro Definition Documentation

 a,
 b)

6.162.2 Function Documentation

6.162.2.1 set_minabs() void set_minabs (
 mha_spec_t & *self*,
 const *mha_real_t* & *m*)

6.162.2.2 safe_div() *mha_spec_t*& safe_div (
 mha_spec_t & *self*,
 const *mha_spec_t* & *v*,
 mha_real_t *eps*)

In-Place division with lower limit on divisor.

```

6.162.2.3 intensity() static mha_real_t intensity (
    const mha_spec_t & s,
    unsigned int channel,
    unsigned int fftlen,
    mha_real_t * sqfreq_response = 0 ) [static]

```

6.163 mha_signal.hh File Reference

Header file for audio signal handling and processing classes.

Classes

- class **MHASignal::spectrum_t**
*a signal processing class for spectral data (based on **mha_spec_t** (p. 848))*
- class **MHASignal::waveform_t**
*signal processing class for waveform data (based on **mha_wave_t** (p. 894))*
- class **MHASignal::doublebuffer_t**
Double-buffering class.
- class **MHASignal::ringbuffer_t**
A ringbuffer class for time domain audio signal, which makes no assumptions with respect to fragment size.
- class **MHASignal::hilbert_t**
Hilbert transformation of a waveform segment.
- class **MHASignal::minphase_t**
Minimal phase function.
- class **MHASignal::stat_t**
- class **MHASignal::delay_wave_t**
Delayline containing wave fragments.
- class **MHASignal::delay_spec_t**
- class **MHASignal::async_rmslevel_t**
Class for asynchronous level metering.
- class **MHASignal::uint_vector_t**
Vector of unsigned values, used for size and index description of n-dimensional matrixes.
- class **MHASignal::matrix_t**
n-dimensional matrix with real or complex floating point values.
- class **MHASignal::schroeder_t**
Schroeder tone complex class.
- class **MHASignal::quantizer_t**
Simple simulation of fixpoint quantization.
- class **MHASignal::loop_wavefragment_t**
Copy a fixed waveform fragment to a series of waveform fragments of other size.
- class **MHASignal::delay_t**
Class to realize a simple delay of waveform streams.
- class **MHASignal::subsample_delay_t**
implements subsample delay in spectral domain.

Namespaces

- **MHASignal**

Namespace for audio signal handling and processing classes.

Macros

- `#define M_PI 3.14159265358979323846`
- `#define mha_round(x) (int)((float)x+0.5)`

Functions

- `void MHASignal::for_each (mha_wave_t *s, mha_real_t(*fun)(mha_real_t))`
Apply a function to each element of a `mha_wave_t` (p. 894).
- `mha_real_t MHASignal::lin2db (mha_real_t x, mha_real_t eps)`
Conversion from linear scale to dB (no SPL reference)
- `mha_real_t MHASignal::lin2db (mha_real_t x)`
Conversion from linear scale to dB (no SPL reference)
- `mha_real_t MHASignal::db2lin (mha_real_t x)`
Conversion from dB scale to linear (no SPL reference)
- `mha_real_t MHASignal::sq2db (mha_real_t x, mha_real_t eps=0.0f)`
conversion from squared values to dB (no SPL reference)
- `mha_real_t MHASignal::db2sq (mha_real_t x)`
conversion from dB to squared values (no SPL reference)
- `mha_real_t MHASignal::pa2dbspl (mha_real_t x, mha_real_t eps)`
Conversion from linear Pascal scale to dB SPL.
- `mha_real_t MHASignal::pa2dbspl (mha_real_t x)`
Conversion from linear Pascal scale to dB SPL.
- `mha_real_t MHASignal::dbspl2pa (mha_real_t x)`
Conversion from dB SPL to linear Pascal scale.
- `mha_real_t MHASignal::pa22dbspl (mha_real_t x, mha_real_t eps=0.0f)`
Conversion from squared Pascal scale to dB SPL.
- `mha_real_t MHASignal::dbspl2pa2 (mha_real_t x)`
conversion from dB SPL to squared Pascal scale
- `mha_real_t MHASignal::smp2sec (mha_real_t n, mha_real_t srate)`
conversion from samples to seconds
- `mha_real_t MHASignal::sec2smp (mha_real_t sec, mha_real_t srate)`
conversion from seconds to samples
- `mha_real_t MHASignal::bin2freq (mha_real_t bin, unsigned fftlen, mha_real_t srate)`
conversion from fft bin index to frequency
- `mha_real_t MHASignal::freq2bin (mha_real_t freq, unsigned fftlen, mha_real_t srate)`

- conversion from frequency to fft bin index*

 - **mha_real_t MHASignal::smp2rad** (**mha_real_t** samples, unsigned bin, unsigned fftlen)
- conversion from delay in samples to phase shift*

 - **mha_real_t MHASignal::rad2smp** (**mha_real_t** phase_shift, unsigned bin, unsigned fftlen)
- conversion from phase shift to delay in samples*

 - **template<class elem_type >**
std::vector< elem_type > MHASignal::dupvec (std::vector< elem_type > vec, unsigned n)

Duplicate last vector element to match desired size.
- **template<class elem_type >**
std::vector< elem_type > MHASignal::dupvec_chk (std::vector< elem_type > vec, unsigned n)

Duplicate last vector element to match desired size, check for dimension.
- **bool equal_dim** (const **mha_wave_t** &a, const **mha_wave_t** &b)

Test for equal dimension of waveform structures.
- **bool equal_dim** (const **mha_wave_t** &a, const **mhaconfig_t** &b)

Test for match of waveform dimension with mhaconfig structure.
- **bool equal_dim** (const **mha_spec_t** &a, const **mha_spec_t** &b)

Test for equal dimension of spectrum structures.
- **bool equal_dim** (const **mha_spec_t** &a, const **mhaconfig_t** &b)

Test for match of spectrum dimension with mhaconfig structure.
- **bool equal_dim** (const **mha_wave_t** &a, const **mha_spec_t** &b)

Test for equal dimension of waveform/spectrum structures.
- **bool equal_dim** (const **mha_spec_t** &a, const **mha_wave_t** &b)

Test for equal dimension of waveform/spectrum structures.
- **void integrate** (**mha_wave_t** &s)

Numeric integration of a signal vector (real values)
- **void integrate** (**mha_spec_t** &s)

Numeric integration of a signal vector (complex values)
- **unsigned int mha_min_1** (unsigned int a)
- **unsigned int size** (const **mha_wave_t** &s)

Return size of a waveform structure.
- **unsigned int size** (const **mha_spec_t** &s)

Return size of a spectrum structure.
- **unsigned int size** (const **mha_wave_t** *s)

Return size of a waveform structure.
- **unsigned int size** (const **mha_spec_t** *s)

Return size of a spectrum structure.
- **void clear** (**mha_wave_t** &s)

Set all values of waveform to zero.
- **void clear** (**mha_wave_t** *s)

Set all values of waveform to zero.
- **void clear** (**mha_spec_t** &s)

Set all values of spectrum to zero.

- void **clear** (**mha_spec_t** *s)
Set all values of spectrum to zero.
- void **assign** (**mha_wave_t** self, **mha_real_t** val)
Set all values of waveform 'self' to 'val'.
- void **assign** (**mha_wave_t** self, const **mha_wave_t** &val)
Set all values of waveform 'self' to 'val'.
- void **assign** (**mha_spec_t** self, const **mha_spec_t** &val)
Set all values of spectrum 'self' to 'val'.
- void **timeshift** (**mha_wave_t** &self, int shift)
Time shift of waveform chunk.
- **mha_wave_t range** (**mha_wave_t** s, unsigned int k0, unsigned int len)
Return a time interval from a waveform chunk.
- **mha_spec_t channels** (**mha_spec_t** s, unsigned int ch_start, unsigned int nch)
Return a channel interval from a spectrum.
- **mha_real_t & value** (**mha_wave_t** *s, unsigned int fr, unsigned int ch)
Access an element of a waveform structure.
- const **mha_real_t & value** (const **mha_wave_t** *s, unsigned int fr, unsigned int ch)
Constant access to an element of a waveform structure.
- **mha_real_t & value** (**mha_wave_t** *s, unsigned int k)
- **mha_complex_t & value** (**mha_spec_t** *s, unsigned int k)
- **mha_complex_t & value** (**mha_spec_t** *s, unsigned int fr, unsigned int ch)
Access to an element of a spectrum.
- const **mha_complex_t & value** (const **mha_spec_t** *s, unsigned int fr, unsigned int ch)
Constant access to an element of a spectrum.
- **mha_real_t & value** (**mha_wave_t** &s, unsigned int fr, unsigned int ch)
Access to an element of a waveform structure.
- const **mha_real_t & value** (const **mha_wave_t** &s, unsigned int fr, unsigned int ch)
Constant access to an element of a waveform structure.
- **mha_complex_t & value** (**mha_spec_t** &s, unsigned int fr, unsigned int ch)
Access to an element of a spectrum.
- const **mha_complex_t & value** (const **mha_spec_t** &s, unsigned int fr, unsigned int ch)
Constant access to an element of a spectrum.
- std::vector< float > **std_vector_float** (const **mha_wave_t** &)
*Converts a **mha_wave_t** (p. 894) structure into a std::vector<float> (interleaved order).*
- std::vector< std::vector< float > > **std_vector_vector_float** (const **mha_wave_t** &)
*Converts a **mha_wave_t** (p. 894) structure into a std::vector< std::vector<float> > (outer vector represents channels).*
- std::vector< std::vector< **mha_complex_t** > > **std_vector_vector_complex** (const **mha_spec_t** &)
*Converts a **mha_spec_t** (p. 848) structure into a std::vector< std::vector<mha_complex_t> > (outer vector represents channels).*
- **mha_wave_t & operator+=** (**mha_wave_t** &, const **mha_real_t** &)
Addition operator.
- **mha_wave_t & operator+=** (**mha_wave_t** &, const **mha_wave_t** &)
Addition operator.

- **mha_wave_t & operator-=** (**mha_wave_t** &, const **mha_wave_t** &)
Subtraction operator.
- **mha_spec_t & operator-=** (**mha_spec_t** &, const **mha_spec_t** &)
Subtraction operator.
- **mha_wave_t & operator*=** (**mha_wave_t** &, const **mha_real_t** &)
Element-wise multiplication operator.
- **mha_wave_t & operator*=** (**mha_wave_t** &, const **mha_wave_t** &)
Element-wise multiplication operator.
- **mha_spec_t & operator*=** (**mha_spec_t** &, const **mha_real_t** &)
Element-wise multiplication operator.
- **mha_spec_t & operator*=** (**mha_spec_t** &, const **mha_wave_t** &)
Element-wise multiplication operator.
- **mha_spec_t & operator*=** (**mha_spec_t** &, const **mha_spec_t** &)
Element-wise multiplication operator.
- **mha_spec_t & operator/=** (**mha_spec_t** &, const **mha_spec_t** &)
Element-wise division operator.
- **mha_wave_t & operator/=** (**mha_wave_t** &, const **mha_wave_t** &)
Element-wise division operator.
- **mha_spec_t & operator+=** (**mha_spec_t** &, const **mha_spec_t** &)
Addition operator.
- **mha_spec_t & operator+=** (**mha_spec_t** &, const **mha_real_t** &)
Addition operator.
- void **set_minabs** (**mha_spec_t** &, const **mha_real_t** &)
- **mha_spec_t & safe_div** (**mha_spec_t** &self, const **mha_spec_t** &v, **mha_real_t** eps)
In-Place division with lower limit on divisor.
- **mha_wave_t & operator^=** (**mha_wave_t** &self, const **mha_real_t** &arg)
Exponent operator.
- void **MHASignal::copy_channel** (**mha_spec_t** &self, const **mha_spec_t** &src, unsigned sch, unsigned dch)
Copy one channel of a source signal.
- void **MHASignal::copy_channel** (**mha_wave_t** &self, const **mha_wave_t** &src, unsigned src_channel, unsigned dest_channel)
Copy one channel of a source signal.
- **mha_real_t MHASignal::rmslevel** (const **mha_spec_t** &s, unsigned int channel, unsigned int fftlen)
Return RMS level of a spectrum channel.
- **mha_real_t MHASignal::colored_intensity** (const **mha_spec_t** &s, unsigned int channel, unsigned int fftlen, **mha_real_t** *sqfreq_response=nullptr)
Colored spectrum intensity.
- **mha_real_t MHASignal::maxabs** (const **mha_spec_t** &s, unsigned int channel)
Find maximal absolute value.
- **mha_real_t MHASignal::rmslevel** (const **mha_wave_t** &s, unsigned int channel)
Return RMS level of a waveform channel.
- **mha_real_t MHASignal::maxabs** (const **mha_wave_t** &s, unsigned int channel)
Find maximal absolute value.

- **mha_real_t MHASignal::maxabs** (const **mha_wave_t** &s)
Find maximal absolute value.
- **mha_real_t MHASignal::max** (const **mha_wave_t** &s)
Find maximal value.
- **mha_real_t MHASignal::min** (const **mha_wave_t** &s)
Find minimal value.
- **mha_real_t MHASignal::sumsqr_channel** (const **mha_wave_t** &s, unsigned int channel)
Calculate sum of squared values in one channel.
- **mha_real_t MHASignal::sumsqr_frame** (const **mha_wave_t** &s, unsigned int frame)
Calculate sum over all channels of squared values.
- void **MHASignal::scale** (**mha_spec_t** *dest, const **mha_wave_t** *src)
- void **MHASignal::limit** (**mha_wave_t** &s, const **mha_real_t** &min, const **mha_real_t** &max)
Limit the signal in the waveform buffer to the range [min, max].
- **mha_complex_t & set** (**mha_complex_t** &self, **mha_real_t** real, **mha_real_t** imag=0)
*Assign real and imaginary parts to a **mha_complex_t** (p. 799) variable.*
- **mha_complex_t mha_complex** (**mha_real_t** real, **mha_real_t** imag=0)
*Create a new **mha_complex_t** (p. 799) with specified real and imaginary parts.*
- **mha_complex_t & set** (**mha_complex_t** &self, const std::complex< **mha_real_t** > &stdcomplex)
*Assign a **mha_complex_t** (p. 799) variable from a std::complex.*
- std::complex< **mha_real_t** > **stdcomplex** (const **mha_complex_t** &self)
*Create a std::complex from **mha_complex_t** (p. 799).*
- **mha_complex_t & expi** (**mha_complex_t** &self, **mha_real_t** angle)
*replaces the value of the given **mha_complex_t** (p. 799) with $\exp(i*b)$.*
- double **angle** (const **mha_complex_t** &self)
Computes the angle of a complex number in the complex plane.
- **mha_complex_t & operator+=** (**mha_complex_t** &self, const **mha_complex_t** &other)
Addition of two complex numbers, overwriting the first.
- **mha_complex_t operator+** (const **mha_complex_t** &self, const **mha_complex_t** &other)
Addition of two complex numbers, result is a temporary object.
- **mha_complex_t & operator+=** (**mha_complex_t** &self, **mha_real_t** other_real)
Addition of a complex and a real number, overwriting the complex.
- **mha_complex_t operator+** (const **mha_complex_t** &self, **mha_real_t** other_real)
Addition of a complex and a real number, result is a temporary object.
- **mha_complex_t & operator-=** (**mha_complex_t** &self, const **mha_complex_t** &other)
Subtraction of two complex numbers, overwriting the first.
- **mha_complex_t operator-** (const **mha_complex_t** &self, const **mha_complex_t** &other)
Subtraction of two complex numbers, result is a temporary object.
- **mha_complex_t & operator-=** (**mha_complex_t** &self, **mha_real_t** other_real)
Subtraction of a complex and a real number, overwriting the complex.
- **mha_complex_t operator-** (const **mha_complex_t** &self, **mha_real_t** other_real)

Subtraction of a complex and a real number, result is a temporary object.

- **mha_complex_t & operator*=(mha_complex_t &self, const mha_complex_t &other)**

Multiplication of two complex numbers, overwriting the first.

- **mha_complex_t operator* (const mha_complex_t &self, const mha_complex_t &other)**

Multiplication of two complex numbers, result is a temporary object.

- **mha_complex_t & operator*=(mha_complex_t &self, mha_real_t other_real)**

Multiplication of a complex and a real number, overwriting the complex.

- **mha_complex_t & expi (mha_complex_t &self, mha_real_t angle, mha_real_t factor)**

*replaces (!) the value of the given mha_complex_t (p. 799) with $a * \exp(i*b)$*

- **mha_complex_t operator* (const mha_complex_t &self, mha_real_t other_real)**

Multiplication of a complex and a real number, result is a temporary object.

- **mha_real_t abs2 (const mha_complex_t &self)**

Compute the square of the absolute value of a complex value.

- **mha_real_t abs (const mha_complex_t &self)**

Compute the absolute value of a complex value.

- **mha_complex_t & operator/= (mha_complex_t &self, mha_real_t other_real)**

Division of a complex and a real number, overwriting the complex.

- **mha_complex_t operator/ (const mha_complex_t &self, mha_real_t other_real)**

Division of a complex and a real number, result is a temporary object.

- **mha_complex_t & safe_div (mha_complex_t &self, const mha_complex_t &other, mha_real_t eps, mha_real_t eps2)**

- **mha_complex_t & operator/= (mha_complex_t &self, const mha_complex_t &other)**

Division of two complex numbers, overwriting the first.

- **mha_complex_t operator/ (const mha_complex_t &self, const mha_complex_t &other)**

Division of two complex numbers, result is a temporary object.

- **mha_complex_t operator- (const mha_complex_t &self)**

Unary minus on a complex results in a negative temporary object.

- **bool operator==(const mha_complex_t &x, const mha_complex_t &y)**

Compare two complex numbers for equality.

- **bool operator!=(const mha_complex_t &x, const mha_complex_t &y)**

Compare two complex numbers for inequality.

- **void conjugate (mha_complex_t &self)**

Replace (!) the value of this mha_complex_t (p. 799) with its conjugate.

- **void conjugate (mha_spec_t &self)**

Replace (!) the value of this mha_spec_t (p. 848) with its conjugate.

- **mha_complex_t _conjugate (const mha_complex_t &self)**

Compute the conjugate of this complex value.

- **void reciprocal (mha_complex_t &self)**

Replace the value of this complex with its reciprocal.

- **mha_complex_t _reciprocal (const mha_complex_t &self)**

compute the reciprocal of this complex value.

- **void normalize (mha_complex_t &self)**

- Divide a complex by its absolute value, thereby normalizing it (projecting onto the unit circle).*
- void **normalize** (**mha_complex_t** &self, **mha_real_t** margin)
Divide a complex by its absolute value, thereby normalizing it (projecting onto the unit circle), with a safety margin.
 - bool **almost** (const **mha_complex_t** &self, const **mha_complex_t** &other, **mha_real_t** times_epsilon=1e2)
Compare two complex numbers for equality except for a small relative error.
 - bool **operator<** (const **mha_complex_t** &x, const **mha_complex_t** &y)
Compares the absolute values of two complex numbers.
 - std::ostream & **operator<<** (std::ostream &o, const **mha_complex_t** &c)
*ostream operator for **mha_complex_t** (p. 799)*
 - std::istream & **operator>>** (std::istream &i, **mha_complex_t** &c)
*preliminary istream operator for **mha_complex_t** (p. 799) without error checking*
 - **mha_fft_t mha_fft_new** (unsigned int n)
Create a new FFT handle.
 - void **mha_fft_free** (**mha_fft_t** h)
Destroy an FFT handle.
 - void **mha_fft_wave2spec** (**mha_fft_t** h, const **mha_wave_t** *in, **mha_spec_t** *out)
Transform waveform segment into spectrum.
 - void **mha_fft_wave2spec** (**mha_fft_t** h, const **mha_wave_t** *in, **mha_spec_t** *out, bool swaps)
Transform waveform segment into spectrum.
 - void **mha_fft_spec2wave** (**mha_fft_t** h, const **mha_spec_t** *in, **mha_wave_t** *out)
Transform spectrum into waveform segment.
 - void **mha_fft_spec2wave** (**mha_fft_t** h, const **mha_spec_t** *in, **mha_wave_t** *out, unsigned int offset)
Transform spectrum into waveform segment. out may have fewer number of frames than needed for a complete iFFT. Only as many frames are written into out as fit, starting with offset offset of the complete iFFT.
 - void **mha_fft_forward** (**mha_fft_t** h, **mha_spec_t** *sIn, **mha_spec_t** *sOut)
Complex to complex FFT (forward).
 - void **mha_fft_backward** (**mha_fft_t** h, **mha_spec_t** *sIn, **mha_spec_t** *sOut)
Complex to complex FFT (backward).
 - void **mha_fft_forward_scale** (**mha_fft_t** h, **mha_spec_t** *sIn, **mha_spec_t** *sOut)
Complex to complex FFT (forward).
 - void **mha_fft_backward_scale** (**mha_fft_t** h, **mha_spec_t** *sIn, **mha_spec_t** *sOut)
Complex to complex FFT (backward).
 - void **mha_fft_wave2spec_scale** (**mha_fft_t** h, const **mha_wave_t** *in, **mha_spec_t** *out)
Transform waveform segment into spectrum.
 - void **mha_fft_spec2wave_scale** (**mha_fft_t** h, const **mha_spec_t** *in, **mha_wave_t** *out)
Transform spectrum into waveform segment.
 - template<class elem_type >
elem_type **MHASignal::kth_smallest** (elem_type array[], unsigned n, unsigned k)
Fast search for the kth smallest element of an array.

- `template<class elem_type >`
`elem_type MHASignal::median (elem_type array[], unsigned n)`
Fast median search.
- `template<class elem_type >`
`elem_type MHASignal::mean (const std::vector< elem_type > &data, elem_type start←_val)`
Calculate average of elements in a vector.
- `template<class elem_type >`
`std::vector< elem_type > MHASignal::quantile (std::vector< elem_type > data, const std::vector< elem_type > &p)`
Calculate quantile of elements in a vector.
- `void MHASignal::saveas_mat4 (const mha_spec_t &data, const std::string &varname, FILE *fh)`
Save a openMHA spectrum as a variable in a Matlab4 file.
- `void MHASignal::saveas_mat4 (const mha_wave_t &data, const std::string &varname, FILE *fh)`
Save a openMHA waveform as a variable in a Matlab4 file.
- `void MHASignal::saveas_mat4 (const std::vector< mha_real_t > &data, const std::string &varname, FILE *fh)`
Save a float vector as a variable in a Matlab4 file.
- `void MHASignal::copy_permuted (mha_wave_t *dest, const mha_wave_t *src)`
Copy contents of a waveform to a permuted waveform.

Variables

- `unsigned long int MHASignal::signal_counter = 0`
Signal counter to produce signal ID strings.

6.163.1 Detailed Description

Header file for audio signal handling and processing classes.

The classes for waveform, spectrum and filterbank signals defined in this file are "intelligent" versions of the basic waveform, spectrum and filterbank structures used in the C function calls.

6.163.2 Macro Definition Documentation

6.163.2.1 M_PI `#define M_PI 3.14159265358979323846`

6.163.2.2 mha_round #define mha_round(
x) (int)((float)x+0.5)

6.163.3 Function Documentation

6.163.3.1 mha_min_1() unsigned int mha_min_1 (
unsigned int a) [inline]

6.163.3.2 value() [1/2] mha_real_t& value (
mha_wave_t * s,
unsigned int k) [inline]

6.163.3.3 value() [2/2] mha_complex_t& value (
mha_spec_t * s,
unsigned int k) [inline]

6.163.3.4 set_minabs() void set_minabs (
mha_spec_t & ,
const mha_real_t &)

6.163.3.5 safe_div() mha_spec_t& safe_div (
mha_spec_t & self,
const mha_spec_t & v,
mha_real_t eps)

In-Place division with lower limit on divisor.

```
6.163.3.6 operator<<() std::ostream& operator<< (
    std::ostream & o,
    const mha_complex_t & c ) [inline]
```

ostream operator for **mha_complex_t** (p. 799)

```
6.163.3.7 operator>>() std::istream& operator>> (
    std::istream & i,
    mha_complex_t & c ) [inline]
```

preliminary istream operator for **mha_complex_t** (p. 799) without error checking

6.164 mha_signal_fft.h File Reference

Classes

- class **MHASignal::fft_t**

Namespaces

- **MHASignal**
Namespace for audio signal handling and processing classes.

6.165 mha_tablelookup.cpp File Reference

6.166 mha_tablelookup.hh File Reference

Header file for table lookup classes.

Classes

- class **MHATableLookup::table_t**
- class **MHATableLookup::linear_table_t**
Class for interpolation with equidistant x values.
- class **MHATableLookup::xy_table_t**
Class for interpolation with non-equidistant x values.

Namespaces

- **MHATableLookup**

Namespace for table lookup classes.

6.166.1 Detailed Description

Header file for table lookup classes.

6.167 mha_tcp.cpp File Reference

Classes

- class **MHA_TCP::sock_init_t**

Namespaces

- **MHA_TCP**

A Namespace for TCP helper classes.

Macros

- #define **INVALID_SOCKET** (-1)

Classes

- struct **MHA_TCP::OS_EVENT_TYPE**
- class **MHA_TCP::Wakeup_Event**
A base class for asynchronous wakeup events.
- class **MHA_TCP::Async_Notify**
Portable Multiplexable cross-thread notification.
- class **MHA_TCP::Event_Watcher**
OS-independent event watcher, uses select on Unix and WaitForMultipleObjects on Windows.
- class **MHA_TCP::Timeout_Event**
- class **MHA_TCP::Timeout_Watcher**
OS-independent event watcher with internal fixed-end-time timeout.
- class **MHA_TCP::Sockread_Event**
Watch socket for incoming data.
- class **MHA_TCP::Sockwrite_Event**
- class **MHA_TCP::Sockaccept_Event**
- class **MHA_TCP::Connection**
***Connection** (p. 857) handles Communication between client and server, is used on both sides.*
- class **MHA_TCP::Server**
- class **MHA_TCP::Client**
A portable class for a tcp client connections.
- class **MHA_TCP::Thread**
A very simple class for portable threads.

Namespaces

- **MHA_TCP**
A Namespace for TCP helper classes.

Macros

- `#define Sleep(x) usleep((x)*1000);`

Typedefs

- typedef int **MHA_TCP::SOCKET**

Functions

- `std::string MHA_TCP::STRERROR (int err)`
Portable conversion from error number to error string.
- `std::string MHA_TCP::HSTRERROR (int err)`
Portable conversion from hostname error number to error string.
- `int MHA_TCP::N_ERRNO ()`
Portable access to last network error number.
- `int MHA_TCP::H_ERRNO ()`
Portable access to last hostname error number.
- `int MHA_TCP::G_ERRNO ()`
Portable access to last non-network error number.
- `double MHA_TCP::dtime ()`
Time access function for system's high resolution time, retrieve current time as double.
- `double MHA_TCP::dtime (const struct timeval &tv)`
Time access function for unix' high resolution time, converts struct timeval to double.
- `struct timeval MHA_TCP::stime (double d)`
Time access function for unix' high resolution time, converts time from double to struct timeval.

6.168.1 Macro Definition Documentation

6.168.1.1 Sleep `#define Sleep(
x) usleep((x)*1000);`

6.169 mha_tcp_server.cpp File Reference

Namespaces

- **mha_tcp**
namespace for network communication classes of MHA

6.170 mha_tcp_server.hh File Reference

Classes

- class **mha_tcp::buffered_socket_t**
An asio TCP socket with an associated streambuf buffer for receiving lines of text, as well as string buffers for sending responses.
- class **mha_tcp::server_t**
Class for accepting TCP connections from clients.

Namespaces

- **mha_tcp**

namespace for network communication classes of MHA

Classes

- class **MHAWindow::base_t**
Common base for window types.
- class **MHAWindow::fun_t**
Generic window based on a generator function.
- class **MHAWindow::rect_t**
Rectangular window.
- class **MHAWindow::bartlett_t**
Bartlett window.
- class **MHAWindow::hanning_t**
von-Hann window
- class **MHAWindow::hamming_t**
Hamming window.
- class **MHAWindow::blackman_t**
Blackman window.
- class **MHAWindow::user_t**
User defined window.
- class **MHAParser::window_t**
MHA configuration interface for a window function generator.

Namespaces

- **MHAWindow**
Collection of Window types.
- **MHAParser**
Name space for the openMHA-Parser configuration language.

Functions

- float **MHAWindow::rect** (float)
Rectangular window function.
- float **MHAWindow::bartlett** (float)
Bartlett window function.
- float **MHAWindow::hanning** (float)
Hanning window function.
- float **MHAWindow::hamming** (float)
Hamming window function.
- float **MHAWindow::blackman** (float)
Blackman window function.

6.179.2 Function Documentation

6.179.2.1 IOInit() int IOInit (
int fragsize,
float samplerate,
IOProcessEvent_t proc_event,
void * proc_handle,
IOStartedEvent_t start_event,
void * start_handle,
IOStoppedEvent_t stop_event,
void * stop_handle,
void ** handle)

IO library initialization function, called by framework after loading this IO library into the MHA process.

Gives plugin callback functions and callback handles to interact with the MHA framework.

Parameters

<i>handle</i>	output parameter. IO library returns pointer to void to the caller via this parameter. All other function calls from the MHA framework will use this handle.
---------------	--

6.179.2.2 IOPrepare() `int IOPrepare (`
 `void * handle,`
 `int nch_in,`
 `int nch_out)`

IO library prepare function, called after the MHA prepared the processing plugins.

6.179.2.3 IOStart() `int IOStart (`
 `void * handle)`

6.179.2.4 IOStop() `int IOStop (`
 `void * handle)`

6.187 MHAIoTCP.cpp File Reference

Classes

- class **io_tcp_parser_t**
The parser interface of the IOTCP library.
- class **io_tcp_sound_t**
Sound data handling of io tcp library.
- union **io_tcp_sound_t::float_union**
This union helps in conversion of floats from host byte order to network byte order and back again.
- class **io_tcp_fwcb_t**
TCP sound-io library's interface to the framework callbacks.
- class **io_tcp_t**
The tcp sound io library.

Macros

- #define **ERR_SUCCESS** 0

Classes

- class **MHAJack::port_t**
Class for one channel/port.
- class **MHAJack::client_t**
Generic asynchronous JACK client.
- class **MHAJack::client_noncont_t**
Generic client for synchronous playback and recording of waveform fragments.
- class **MHAJack::client_avg_t**
Generic JACK client for averaging a system response across time.

Namespaces

- **MHAJack**

Classes and functions for openMHA and JACK interaction.

Macros

- #define **MHAJACK_FW_STARTED** 1
- #define **MHAJACK_STOPPED** 2
- #define **MHAJACK_STARTING** 8
- #define **IO_ERROR_JACK** 11
- #define **IO_ERROR_MHAJACKLIB** 12
- #define **MAX_USER_ERR** 0x500

Functions

- void **MHAJack::io** (**mha_wave_t** *s_out, **mha_wave_t** *s_in, const std::string &name, const std::vector< std::string > &p_out, const std::vector< std::string > &p_in, float *srate=NULL, unsigned int *fragsize=NULL, bool use_jack_transport=false)
Functional form of generic client for synchronous playback and recording of waveform fragments.
- std::vector< unsigned int > **MHAJack::get_port_capture_latency** (const std::vector< std::string > &ports)
Return the JACK port latency of ports.
- std::vector< int > **MHAJack::get_port_capture_latency_int** (const std::vector< std::string > &ports)
Return the JACK port latency of ports.
- std::vector< unsigned int > **MHAJack::get_port_playback_latency** (const std::vector< std::string > &ports)
Return the JACK port latency of ports.
- std::vector< int > **MHAJack::get_port_playback_latency_int** (const std::vector< std::string > &ports)

Variables

- char **last_jack_err_msg** [**MAX_USER_ERR**]

`int argc,`
`char * argv[])`

6.191 mhapluginloader.cpp File Reference

6.192 mhapluginloader.h File Reference

Classes

- class **PluginLoader::config_file_splitter_t**
- class **PluginLoader::fourway_processor_t**
This abstract class defines the interface for classes that implement all types of signal domain processing supported by the MHA: wave2wave, spec2spec, wave2spec, and spec2wave.
- class **PluginLoader::mhapluginloader_t**
- class **MHAParser::mhapluginloader_t**
Class to create a plugin loader in a parser, including the load logic.

Namespaces

- **PluginLoader**
- **MHAParser**
Name space for the openMHA-Parser configuration language.

Functions

- const char * **PluginLoader::mhastrdomain** (**mha_domain_t**)
- void **PluginLoader::mhaconfig_compare** (const **mhaconfig_t** &req, const **mhaconfig_t** &avail, const std::string &pref="")
*Compare two **mhaconfig_t** (p. 905) structures, and report differences as an error.*

6.193 mhasndfile.cpp File Reference

Functions

- void **write_wave** (const **mha_wave_t** &sig, const char *fname, const float &rate, const int &format)
- unsigned int **validator_channels** (std::vector< int > channel_map, unsigned int **channels**)
- unsigned int **validator_length** (unsigned int maxlen, unsigned int frames, unsigned int startpos)

6.193.1 Function Documentation

- 6.193.1.1 write_wave()** void write_wave (
 const **mha_wave_t** & sig,
 const char * fname,
 const float & srate,
 const int & format)
- 6.193.1.2 validator_channels()** unsigned int validator_channels (

6.223.1 Macro Definition Documentation

6.223.1.1 NUM_ENTR_MHAORIG `#define NUM_ENTR_MHAORIG 76`

6.223.1.2 NUM_ENTR_LTASS `#define NUM_ENTR_LTASS 25`

6.223.1.3 NUM_ENTR_OLNOISE `#define NUM_ENTR_OLNOISE 49`

6.223.2 Function Documentation

6.223.2.1 fhz2bandno() `float fhz2bandno (`
`float x)`

6.223.2.2 erb_hz_f_hz() `float erb_hz_f_hz (`
`float f_hz)`

6.223.2.3 hz2hz() `float hz2hz (`
`float x)`

Dummy scale transformation Hz to Hz.

This function implements a dummy scale transformation (linear frequency scale).

Parameters

x	Input frequency in Hz
-----	-----------------------

Returns

Frequency in Hz

6.223.2.4 `bandw_correction()` float `bandw_correction` (
float *f*,
float *ldb*)

6.223.3 Variable Documentation

6.224 spechnoise.h File Reference

Classes

- class `spechnoise_t`

6.225 split.cpp File Reference

Classes

- class **MHAPLugin_Split::uni_processor_t**
An interface to a class that sports a process method with no parameters and no return value.
- class **MHAPLugin_Split::thread_platform_t**
Basic interface for encapsulating thread creation, thread priority setting, and synchronization on any threading platform (i.e., pthreads or win32threads).
- class **MHAPLugin_Split::dummy_threads_t**
Dummy specification of a thread platform: This class implements everything in a single thread.
- class **MHAPLugin_Split::posix_threads_t**
Posix threads specification of thread platform.
- class **MHAPLugin_Split::domain_handler_t**
Handles domain-specific partial input and output signal.
- class **MHAPLugin_Split::splitted_part_t**
*The **splitted_part_t** (p. 1230) instance manages the plugin that performs processing on the reduced set of channels.*
- class **MHAPLugin_Split::split_t**
Implements split plugin.

Namespaces

- **MHAPLugin_Split**

Macros

- #define **MHAPLUGIN_OVERLOAD_OUTDOMAIN**
This define modifies the definition of MHAPLUGIN_CALLBACKS and friends.
- #define **posixthreads** 1
- #define **native_thread_platform_type** posix_threads_t

Enumerations

- enum { **MHAPLugin_Split::INVALID_THREAD_PRIORITY** = 999999999 }
Invalid thread priority.

6.225.1 Detailed Description

Source code for the split plugin. The split plugin splits the audio signal by channel. The splitted paths execute in parallel.

6.225.2 Macro Definition Documentation

6.225.2.1 MHAPLUGIN_OVERLOAD_OUTDOMAIN `#define MHAPLUGIN_OVERLOAD_OUTDO↔
MAIN`

This define modifies the definition of MHAPLUGIN_CALLBACKS and friends.

The output signal is transferred through a second parameter to the process method, enabling all four domain transformations in a single plugin.

6.225.2.2 posixthreads `#define posixthreads 1`

6.225.2.3 native_thread_platform_type `#define native_thread_platform_type posix_↔
threads_t`
